FOREWORD

In past years the Census Report was so to speak tied on to the tables of which to a large extent it was a translation in words. With the developments in departmental administration and specialist provision which are a feature of all governments, it is no longer necessary for Census Superintendents to attempt a separate dissertation on every table. Nor is it desirable.

The principle should rather be that the tables are produced for the use of departments concerned and of the public as a whole. The departmental specialists will deal with this specific aspect and what the Census Superintendent should aim at is a synoptic survey which will take and keep the whole province or state in view throughout and try to represent it as an organic and developing whole.

The essay form has been adopted as far as possible in order to produce the utmost degree of continuity and interest. Tables have been reduced to a minimum in order to enhance its readability and the theory is that the essay should be capable of being read quite separately by a stranger who from it alone without other assistance would gain a definite idea of what the province or state stands for, what its main conditions and problems are and in what direction it is developing.

The essay is not a gazetteer and deliberately omits ordinary standard detail which can be obtained in departmental publications. Readers are therefore referred to these publications for such matter.

INTRODUCTION

The Report.—The 1941 Census Report is in four parts. Part I takes the form of an essay. It describes the boundaries of the Jammu and Kashmir State, its physical features, the system of administration, the constitutional changes made during the decade, the distribution and composition of the population, departmental activities and the bearing they have on the well-being of the people, the more important aspects of the facts recorded by the Census and the ability of the country to support an increasing population.

Part II gives the results of the Census in tabular form; it contains Imperial Tables, State tables and Subsidiary tables. Each Imperial table is preceded by brief explanatory notes and followed by subsidiary tables. At previous Censuses the subsidiary tables were published in Part I at the end of the chapter discussing the table to which they pertained.

Part III consists of Village Tables and Housing Statistics. The former show the population, chief communities, literate persons by sexes in each village, number of occupied houses and the population at the previous Census. The villages are grouped by districts, tehsils, charges and circles; figures are given separately for the two cities of Jammu and Srinagar. Notes precede the tables of each district. The Housing Statistics represent an attempt to tabulate the information regarding housing conditions recorded in the House Lists; they leave much to be desired but constitute a new feature. At the next Census it may be possible to obtain more accurate data in this respect. Part III is of purely local interest and the distribution of copies has been restricted to officials, representatives of the press and others in the State.

Part IV discusses the Census operations and administrative matters. It is primarily intended for the information of His Highness' Government and those conducting operations in the State at the next Census. It is being printed for local issue only.

Parts I and II are produced together in one volume. In previous reports each Imperial Table was discussed at great length chapter by chapter; on this occasion there is no such detailed

discussion. There are no graphs or diagrams. An endeavour has been made to give the general reader an accurate picture of conditions in the State relating to those questions with which the Census is concerned without the necessity of having to wade through a mass of technical detail. The essential facts are available in the tables; where it is thought that they are defective in any respect this has been plainly stated in the notes.

II. Census Operations.—The first attempt to take a Census in the Jammu and Kashmir State was made in 1873; it was little better than an estimate. In 1891 regular Census operations were carried out synchronously with the rest of India but they did not cover the Gilgit Agency. In 1901 the second regular Census was taken. The results of both the 1891 and the 1901 Censuses left much to be desired. The Census taken in 1911 was the first complete Census conducted in strict conformity with the principles and instructions emanating from the Census Commissioner for India. The Censuses conducted in 1921 and 1931 followed closely the methods of 1911.

The 1941 Census staff has benefitted by the experience gained during the last three decades and I acknowledge the debt owed to our predecessors. The operations have been carried out in accordance with the instructions issued by the Census Commissioner for India with such minor modifications as were necessary to meet local conditions. Zero hour was sunrise on March 1st 1941, to which date and time all births and deaths were related. There was no communal discord. The weather was satisfactory throughout the period of enumeration. A few complaints were received which were investigated immediately and disposed of without difficulty. All communities appear to have been satisfied with the results. The only question which gave rise to any irregularities, as far as is known, was that relating to 'Mothertongue'. The Persian-Devanagiri script controversy had its effect on the answers recorded in this connection. Clear instructions were issued to enumerators that 'Hindi' and 'Urdu' should both be recorded as 'Hindustani'. Even so it is feared the record for Mothertongue has been vitiated in certain areas because those active in the script controversy carried on propaganda to

influence those of their persuasion to show Urdu or Hindi as their mother-tongue, irrespective of the facts.

The normal Census divisions, consisting of districts, tehsils, charges, circles and blocks were created. District Officers (Wazirs Wazarat) automatically became District Census Officers in addition to their usual duties. Similarly, Tehsildars became Tehsil Census Officers. Charges, circles and blocks varied in size according to local conditions. The average charge in non-city areas consisted of 6.5 circles with 2,888 occupied houses and a population of 14,934. The average circle in non-city areas consisted of 12 blocks with 445 occupied houses and a population of 2,304. In city areas the average block consisted of 46 houses with a population of 326. A 'house', as at previous Censuses, was deemed to consist of a single commensal unit. The Revenue Department furnished the bulk of the personnel but most departments supplied their quota for the smaller Census divisions. Many of the enumerators were non-officials. In all there were 258 Charge Superintendents, 1,706 Supervisors and 19,997 Enumerators.

In 1931 the actual Census was preceded by a preliminary enumeration. This record was subjected to a final check carried out between the hours of 7/00 P. M., and midnight on Census Day. The aim was to obtain the equivalent of an instantaneous photograph of the population. To subject the record of some weeks' laborious effort to a hectic five hour check did not necessarily produce a better record. On this occasion there was only one enumeration which was continuous over a period of one month. Our aim was to complete the record three days previous to Census Day so that supervisors might have time to check enumerators' work and get obvious errors corrected. The record thus obtained was subjected to a necessary minor revision on Census Day when births and deaths which had occurred during the period of enumeration were adjusted with relation to sunrise on March 1st. In the case of deaths up to zero hour the slips already written were cancelled under supervisors' initials; in the case of births a slip was filled in. The enumeration was based on normal place of residence. Temporary absences were ignored. The criterion in all doubtful cases was whether a person would be at his normal place of residence on March 1st.

It will be obvious to those having the slightest knowledge of the geography of the

State why some modifications had to be made in the enumeration time-table to meet local conditions. For example, many villages situated in the high mountainous areas of Ladakh, Astore, Gilgit and Karnah are usually cut off by snow in February of any year making movement very difficult and good enumeration practically impossible. The whole of these areas was enumerated non-synchronously, work commencing on December 1st and being completed by the end of that month. There are many villages in other districts where similar conditions obtain. These too were enumerated non-synchronously during the period mentioned. There is little movement in such areas during the winter. Special arrangements were also made to enumerate the population living in boats and those to be found in forest and road construction camps, hotels, wayside halting-places, jails, and hospitals. All these were enumerated where found on Census Day. At previous Censuses passengers on running-trains and other transport services were stopped and enumerated. Since the population was enumerated on this occasion on the basis of usual place of residence special measures for enumerating such short period travellers were dispensed with.

Arrangements were made in advance for the preparation of enumerators' abstracts, circle, charge and tehsil summaries, and for the collection and despatch of the record to headquarters. District officers were required to calculate provisional totals for their respective districts and to communicate these to the Direction Office as soon as possible by hand or telegram according to circumstances. Prompt communication of the totals was asked for but not undue haste. The work was carried out satisfactorily. The provisional totals for the whole State were communicated to the Census Commissioner for India well within the period fixed. These gave the population for the whole State as 4,021,658. Compilation of the record showed the correct figures to be 4,021,616—a difference of 42 persons or an error of just over one per hundred thousand.

III. Tabulation and Compilation.—It is not proposed to discuss the work of abstraction and compilation in detail here; this finds its place in Part IV of the report. In the past it has always been the practice to have two offices for tabulation—one located at Jammu and the other at Srinagar. At this Census the whole of the work was concentrated in one office at Srinagar. There are no linguistic difficulties to make it necessary to open offices in different localities. The record is not too large

to handle in one office. The advantages gained by having one central office are obvious; the most important are closer supervision, quicker issue of instructions and disposal of references and uniformity of treatment. The Tabulation Office was accommodated in a building within 300 yards of the Direction Office. As answers to questions at this Census were recorded direct on to the slips to be sorted for tabulation there was no necessity for slip-copying except in the case of a few special household schedules; the use of these was strictly limited and the number involved very small. The use of the original record for tabulation necessitated the close scrutiny of the slips forming the record, the correction of obvious errors and the removal of blank and cancelled slips. This proved a troublesome and laborious process but that is an administrative matter which is discussed in Part IV. Tabulation commences with the checking of the record received against district, tehsil, charge and circle summaries and the enumerators' abstracts; it was commenced on 26th March 1941 and completed on November 15th 1941; half the staff was dispensed with and the rest retained for compilation work for which we allowed a period of 3 months. The Compilation Office was closed on February 11th 1942. The checking of tables and the preparation of the remaining subsidiaries was carried on and completed in the Direction Office.

IV. Accuracy of the Record.—The ability and readiness of an unpaid Census agency, many of whom are unavoidably of a low standard of education, to record complete and correct answers to a long and, in some respects, difficult questionnaire is obviously subject to limitations. It may, however, be accepted as a fact that the great majority of the enumerators made an honest attempt to grapple with the onerous duties entrusted to them. It must be stated in clear terms that the answers to some questions were not accurate or complete. Consequently some tables do not represent a correct record of the real position. The tables relating to the actual population, its distribution, variations and communal composition may be accepted as correct subject to a very small margin of error; the same may be said of the tables relating to birthplace. Table VII, Age and Civil Condition, is subject to the defects inherent in all age tables prepared by the Census agency. Some people have a deep-rooted objection to giving their correct age on any document in any country. In India large numbers of the population do not know their real age and can only make a guess. Such guesses are frequently inaccurate. There is,

and always has been, a definite tendency to give a round figure such as 20, 30, 35 and 40. For any age over 50 the figures for the most part must be treated as approximate only. These defects are not peculiar to this State; they are common to the whole of India. But as they have always existed the age table at this Census is reliable for the purpose of comparison with the figures given at previous Censuses.

The answers to the questions on which Tables VIII and IX are based were incomplete and very unsatisfactory. These tables must therefore be considered defective and practically useless for statistical purposes. They indicate a general condition only. Table X gives a more accurate record of the real position than the same table for 1931 but unemployment under all heads may be assumed to be in excess of the figures given. This is due to the fact that some are diffident in admitting that they are unemployed. Table XI may be accepted as reasonably accurate and Table XII too, except to the extent that Hindustani has been shown as Mother-tongue. The number of persons living in the State whose true Mother-tongue is either Urdu or Hindi, both shown as Hindustani in the table, is very small. The remaining tables may be accepted as reasonably accurate.

V. Cost of the Census.—The total expenditure on Census operations, excluding some minor charges which at the time of writing have not been adjusted, comes to Rs. 1,48,000. It is anticipated that the minor charges referred to will be more than covered by receipts on account of the sale of furniture etc., when the department is closed. The exact figures will be given in the Administration section of the report—Part IV. On the basis of the figure given above the cost works out at Rs. 36·8 per thousand of the population. The cost in 1921 and 1931 was Rs. 1,46,332 and Rs. 1,49,508 and the rate per thousand of the population Rs. 44 and Rs. 41 respectively.

VI. Public Attitude.—The political atmosphere throughout the country was calm during the whole period of the Census operations. The public showed no hostility to the Census in any form; their attitude was either apathetic or they co-operated to the best of their ability. It is not easy to convince the public that the Census is their census and that full co-operation is likely to be advantageous to them as well as to the administration. There was no occasion to take proceedings under the

penal clauses of the Census Act. The press gave us their co-operation and were helpful in giving publicity to notices and communiques. The only Census questions which gave rise to hesitancy and reluctance were 7 and 8, relating to the number of children born to a married woman and her age at the birth of her first child. These questions were not correctly answered in many cases; in a large number they were not answered at all. The fertility tables prepared from them should not be regarded as accurate.

VII. Acknowledgements.—The All-India Census becomes more exacting and a greater strain on those responsible for its conduct every decade. The Government of India decided to restrict tabulation and to confine compilation to a few of the more important tables and to file the Census record for future reference. His Highness' Government decided to complete the work in every respect.

Before concluding these introductory notes I should like to acknowledge the assistance received from all quarters. To the thousands

of unpaid Census workers, both official and unofficial, I can only offer our very sincere thanks. We are grateful to Mr. M. W. W. M. Yeatts, C. I. E., I. C. S., Census Commissioner for India, for his guidance and advice. I am indebted to the Hon'ble Dewan Bahadur Sir N. Gopalaswami Ayyangar Kt., C. S. I., C. I. E., Prime Minister, His Highness' Government, Jammu and Kashmir for his sympathetic understanding of our difficulties and problems and his prompt assistance to us in our efforts to overcome them. I acknowledge with pleasure the co-operation of all those officials and representatives of the public who kindly responded to our requests for notes on departmental activities and conditions of living. Finally, I must express my great appreciation of the loyal co-operation I have received throughout from my staff.

SRINAGAR:

June 30th 1942.

R. G. WREFORD,

CENSUS COMMISSIONER,

Jammu and Kashmir State.

CENSUS OF INDIA 1941

VOLUME XXII

JAMMU & KASHMIR STATE

PART I.

Boundaries and Area.—The Jammu and Kashmir State lies between 32.17' and 36.58' North Latitude and 73.26' and 80.30' East Longitude. To appreciate fully the political importance of its geographical position one must look at a map of Asia. On its northern borders three empires meet—the British, the Russian and the Chinese. The independent kingdom of Afghanistan lies to the north-west, the Punjab to the south and the North West Frontier Province to the west. On the east it is bounded by Chinese Tibet and on the north and north-east by Russian and Chinese Turkistan. It has an area of 84,471 sq. miles and is the largest State in India. The chief rivers are the Indus, the Jhelum and the Chenab all of which thread their way through the territories of the State later to form the main part of the mighty waterways which irrigate and fertilise the Punjab and Sind provinces of British India.

2. Natural Divisions.—The natural or geographical divisions of the State, first adopted for Census purposes in 1911, are The Sub-montane and Semi-mountainous tract, The Outer Hills, The Jhelum Valley and the Indus Valley. The first consists of the plains bordering the Punjab and the broken mass of foothills lying at the base of the great mountain ranges of the Himalayan series. This division contains the following administrative units:—

the tehsils Kathua and Jasmergarh of the Kathua District, the whole of the Jammu District and the tehsils Bhimber and Mirpur of the Mirpur District.

The Chenab and the Jhelum both flow through this division. The northern parts of this

division consist chiefly of foothills, known locally as 'Kandi', which rise to a height of about 2,000 ft.; for the most part they are stony and arid. They thirst for the water which cannot reach them. In the 'Kandi' areas cultivation is meagre and scattered; the crops depend very largely on timely rains. The area of this division is 2,609 sq. miles. The population at the time of the recent Census was 814,028.

'The Outer Hills' division consists of the lower hills lying roughly to the south of the Pir Panjal. The latter separates the two main provinces of the State, Jammu and Kashmir, from each other. A large part of this area lies at an altitude of between 2,000 and 4,000 ft. but in the Udhampur District, and in other areas too, the hills become mountains and reach a height of over 15,000 ft. Bhadrawah (5,540 ft.) and Kishtwar (5,360 ft.), the headquarters respectively of the two tehsils bearing the same names, are both in close proximity to high mountains. The following administrative units are situated in this natural division:—

the Basohli Tehsil of the Kathua District, the Kotli Tehsil of the Mirpur District, the entire districts of Reasi and Udhampur and the Poonch and Chenani Jagirs.

The chief river is the Chenab which enters the Udhampur District from the Chamba State and the Great Himalayan range to the east and continues through the Reasi District and the Akhnur Tehsil of the Jammu District finally to reach the Punjab near Sialkot. In the lower areas of this division rice and wheat are mostly grown; higher up maize is the chief crop

and staple food. From elevations of about 5,000 to 8,000 ft. the mountain sides, where not exposed to the scorching winds of the plains, are clothed with magnificent pine and deodar forests, particularly in the tehsils Ramban, Kishtwar and Bhadrawah of the Udhampur District. Bhadrawah has often been called a miniature Kashmir. The Reasi District is known to be rich in minerals which, as yet, are almost untouched. Except in the fertile valleys, cultivable land is scarce and scattered consisting of comparatively small plateaux and patches of cultivation. Rainfall is plentiful—the highest in the State—thanks to the warm moisture laden winds which strike against the high Pir Panjal range and deposit their waters on the surrounding country. The area of this division is 9,769 sq. miles; the population was returned at 1,167,405. These two natural divisions—The Sub-montane tract and The Outer Hills—together constitute the entire Jammu Province, including the Poonch and Chenani Jagirs.

The Jhelum Valley division corresponds to the administrative districts of Anantnag, Baramulla and Muzaffarabad that is to say, the Kashmir Province. Seven of the tehsils of the two first named districts—Srinagar, Anantnag, Kulgam, Pulwama, Baramulla, Sri Pratapsinghpura and Uttarmachhipura—form what is usually known as the Kashmir Valley. The Jhelum rises at Verinag at the southern end of the Kashmir Province and flows through the middle of the Kashmir Valley. It receives the waters of numerous tributaries on both its banks before it enters the Wolar Lake out of which it flows on through the gorge at Baramulla; its chief tributaries are the Liddar and the Sind, both on its right bank. They have their source in the everlasting snows and in their course pass through magnificent mountain scenery which has to be seen to be believed. No words are adequate to describe the beauty and grandeur of the Liddar and Sind Valleys. The Kishanganga river, having its source on the southern slopes of the mountains in the neighbourhood of the Burzil and Kamri Passes, joins the Jhelum on its right bank at Domel in the Muzaffarabad District; thus the valley of the Kishanganga forms part of the natural division known as the Jhelum Valley. On the left bank of the Jhelum, roughly west, is the Pir Panjal Range from the slopes of which numerous small streams flow into it. For the most part they are little more than mountain torrents. The country to the south and west of the Pir Panjal gets more rain than the Kashmir side of the watershed. The mountains

surrounding the Jhelum Valley average about 12,000 ft.; many of the peaks exceed 14,000 ft. At the southern end of the valley they dip to about 9,000 ft. where the Banihal pass gives an exit to the Jammu Province. The main Kashmir Valley averages about 5,500 ft. with Srinagar (5,200 ft.) at its centre. The higher areas under cultivation in the Liddar and Sind Valleys exceed 7,000 ft. The major part of the Muzaffarabad District and the higher elevations of the Anantnag and Baramulla Districts are too high and mountainous for cultivation. The lower and flatter areas produce rich harvests of rice and maize; wheat and barley and many other crops are grown too but rice and maize are by far the most important. All kinds of fruit trees grow in abundance. Most of the food grain supplies of this division are grown in what is commonly known as the Kashmir Valley; this consists of the valley of the Jhelum from its source to Baramulla and the subsidiary valleys on both banks. The area of this division is 8,539 sq. miles and the population 1,728,705.

The Indus Valley or 'Tibetan and Semi-Tibetan Tract' consists mainly of the middle reaches of the Indus, which, taking its source from the Mansarowar Lake in Tibet, traverses the frontier districts of the State from south-east to north-west as far as a point near the peak Haramosh (24,270 ft.). It then takes a south-westerly course passing the Nanga Parbat massif to its north, on through the Chilas illaqa of the Gilgit Agency to independent tribal territory and later to the North West Frontier Province and the Punjab. With the Karakoram to the north-east, the Hindu Kush to the north-west, the central range of the Himalaya to the south and the subsidiary ranges of all three of these great mountain systems running through it at all angles and all heights, this division consists practically entirely of snow capped mountains, high plateaux, ravines and wastes. The area contains the giants Mt. Godwin Austin (28,250 ft.) and Nanga Parbat (26,660 ft.). There are literally hundreds of peaks exceeding 20,000 ft. in height many of them not even bearing a name. This division corresponds to the administrative units Ladakh District, Astore Tehsil, Gilgit (Leased Area) and Gilgit Agency. As its name indicates the Indus is the chief river. At the northern end of the small Bunji plain, as it leaves the Haramosh range, it is joined by the Gilgit river. The latter rises near the Durkot Pass in the Yasin illaqa of the Gilgit Agency and is itself fed by the Hunza river which rises near the Pamirs and makes its junction a few miles from Gilgit. The Astore river, which has its source on the northern slopes

of the Burzil, joins the Indus at the southern end of the small Bunji plain as it turns into the great gorge below Gor leading to Chilas.

The Ladakh District is very dry and almost rainless. The Astore District is much better off in this respect; Gilgit (Leased Area) and Gilgit Agency are better off too but not below altitudes of 7,000 ft. The cultivable area in all districts is a very small proportion of the total area. Such cultivation as there is depends entirely on irrigation by small canals, known as Kuhls, fed by the melting snows, except in the Astore District where the rainfall is sufficient for maize and other crops grown in hilly tracts at elevations between 7,000 ft. and 9,000 ft. In Ladakh grim, a kind of barley, is grown at altitudes as high as 15,000 ft.; it is the most important crop. In the Astore District maize is the chief crop. Gilgit (Leased Area) and Gilgit Agency are more fortunate in the matter of elevation, climate and irrigation. Wheat, barley, maize and dhals are produced and some rice of poor quality. The area of this division is 63,554 sq. miles and the population 311,478.

The 'Natural Divisions' discussed did not exist as such until the Census of 1911. Previously the population had been shown by administrative units. The natural divisions made in 1911 have been adopted at all subsequent Censuses. They are based on a somewhat arbitrary division. This was unavoidable since they had to correspond with some definite grouping of administrative units to facilitate comparison of figures. The fact is the whole country is mountainous except for a comparatively small area bordering the Punjab; one can only say a certain area is less mountainous than another or that the mountains are bigger in one division than another. Within the limits of each conditions vary considerably. In the Indus Valley division altitudes vary from about 3,000 ft. to Mt. Godwin Austin's 28,250 ft.; rainfall varies from practically nil to a reasonable figure. Temperatures range from over 120 in the shade in the rocky gorges of the Indus in summer to below zero in many of the populated villages of the higher altitudes in winter. Similar variations in conditions are found in all the other divisions to a smaller degree. The rich soil and the abundant crops of the central parts of the Kashmir Valley provide living conditions which are beyond comparison with those obtaining in the mountainous wastes of a large part of the same division. Even in populated areas conditions vary with every rise of a few hundred feet in altitude. In the comparatively short distance of 30 miles from the centre of the

Kashmir Valley in an easterly or westerly direction we rise in altitude from 5,200 ft. at Srinagar to 10,000 ft. on the slopes of the surrounding mountains. The Outer Hills division contains some areas with rich soil and abundant crops and others which are sandy, stony or mountainous wastes; some areas with a temperature which is tropical and others where it is almost arctic. In the Sub-montane division living conditions show less variation than in the others, but even here they vary considerably. It is, therefore, reasonable to say that the natural divisions have been created on an arbitrary basis and one must not assume that the living conditions are even approximately the same throughout any of them. The fact is the nature of the country is such that no practical scheme of natural divisions is possible which would bring into the various divisions so made all parts of the population living under the same conditions. The best division for practical purposes would be a provincial one consisting of the Jammu Province including the Poonch and Chenani Jagirs, the Kashmir Province and the Frontier Districts.

3. **Administrative Units.**—For the purposes of administration the State is divided as follows:—

- (i) the Jammu Province,
- (ii) the Kashmir Province (including Astore),
- (iii) the Ladakh District,
- (iv) Gilgit (Leased Area) and the Gilgit Agency.

Units (iii) and (iv) together with the Astore District of the Kashmir Province, correspond to the group designated 'Frontier Districts' in the tables given in Part II of the report. At the 1931 Census the present districts of Astore and Gilgit (Leased Area) together formed the Gilgit District. The present Astore District is the Cis-Indus part of the old Gilgit District; Gilgit (Leased Area) is the Trans-Indus part. The Gilgit Agency, shown in the Census Report for 1931 and previously as 'Frontier Illaqs', consists of areas which, whilst owing allegiance and paying tribute to His Highness the Maharaja Bahadur of Jammu and Kashmir, are administered on behalf of His Highness' Government by the Government of India's Political Agent at Gilgit. The designation 'Gilgit Agency' has been shown on this occasion instead of 'Frontier Illaqs' as it is deemed to be a more precise and at the same time more comprehensive term than the somewhat vague designation 'Frontier Illaqs'; it refers to the same areas, neither more

nor less. The Poonch and Chenani Jagirs, situated in the Jammu Province, are administered by their respective Jagirdars subject to the overlordship of His Highness the Maharaja Bahadur of Jammu and Kashmir.

4. **District Changes.**—There was no change in external boundaries during the decade ending 31st December 1940 but there was one important change of administrative boundaries. Reference has already been made to the partition of the old Gilgit District into two separate units—Astore and Gilgit (Leased Area). In the middle of the decade (1934) negotiations were concluded between His Highness the Maharaja Bahadur of Jammu and Kashmir and the Government of India by which the Trans-Indus part of the old Gilgit District was leased to the Government of India for administrative purposes. This area, designated Gilgit (Leased Area), has since been administered on behalf of His Highness' Government by the Government of India's Political Agent at Gilgit. In the present tables the areas of Astore and Gilgit (Leased Area) have been shown as 1,632 sq. miles and 1,480 sq. miles respectively. Together they make the total of the area of the old Gilgit District as shown in the 1931 tables *viz.* 3,112 sq. miles. For a short time after the lease of the area referred to, the Cis-Indus part of the old Gilgit Wazarat, now designated Astore, was included with the Ladakh District for administrative purposes. Subsequently it was transferred to the Kashmir Province and placed under a revenue official directly responsible to the Governor of the Kashmir Province but its geographical position makes it a part of the Frontier Districts. Subject to the changes discussed administrative units remain the same as those shown in the 1931 tables. There is no occasion to detail them here; the districts of the two provinces are shown in the Imperial Tables; the tehsil sub-divisions of the districts are given in the State Tables.

5. **The Government of the State.**—The main purpose of a Census is to ascertain the increase or decrease of population in the whole area and in particular areas during the previous decade. The most important questions arising from the results shown are whether the country can support an increasing population without deterioration in the standard of living, assuming there is an increase, and what are the causes of any actual decrease or abnormally low rate of increase. All other questions are subsidiary. The nature of the administration of any country has an important bearing on living conditions and before we examine the tabulated results of the Census it will be well to discuss the existing

administration and the constitutional changes which have occurred in the past ten years. The country is governed by His Highness the Maharaja Bahadur of Jammu and Kashmir with the assistance of a council of ministers presided over by the Prime Minister, the Hon'ble Dewan Bahadur Sir N. Gopalaswami Ayyangar, C. S. I., C. I. E., and a Legislative Assembly, known as the Praja Sabha, consisting of elected representatives, nominated members and official members. For the proper administration of law and justice there is a High Court of Judicature. The full bench consists of the Chief Justice and two other judges. There is a Board of Judicial Advisers to assist His Highness with advice in appeal cases. Whilst legislation may be initiated by the Assembly subject to the rules of procedure, or by the Prime Minister and the ministers associated with him to form the Council, all legislation must receive the assent of His Highness before it becomes law. All activities of the State are directed by Heads of Department responsible to the ministers who hold the portfolios for their respective departments. Except in the case of reserved subjects, members of the Praja Sabha are entitled to discuss the activities of any department. At the time of the 1931 Census the representatives of His Highness' subjects were not associated with the government of the State. Since then there have been important constitutional changes. It will be suitable to discuss here what they are and the immediate causes which gave rise to them.

6. **Grievances Commission.**—Riots occurred towards the end of the summer of 1931. For some years previously there had been political unrest throughout India and dissatisfied elements in this State were not slow to adopt the movement started there. Communal claims led to the excitement of communal feelings. Small incidents which would have been considered of little or no importance in normal times were seized upon and magnified; disaffected elements were alert to find fuel to add to the fire of discontent they had kindled. There were some who felt they had a legitimate grievance. In the excited atmosphere which had been engendered minor indiscretions, having no malicious purpose, were exaggerated and represented by interested parties as deliberate attacks on this religion or that community. His Highness ordered immediate enquiries; some officials were found to have failed in the discharge of their duties in one respect or another and remedial measures were taken.

In November 1931 His Highness appointed

a Commission to enquire into the grievances and complaints of all sections of his subjects. The Commission was presided over by Mr. B. J. Glancy, I. C. S., now His Excellency Sir Bertrand Glancy, Governor of the Punjab, whose services were lent by the Government of India at His Highness' request. The inquiry was conducted in a very prompt and thorough manner. The Commission's recommendations were submitted in March 1932 and received immediate attention. Orders were issued in April 1932 that steps should be taken to implement the recommendations as early as possible. At the same time as he appointed the Commission to inquire into grievances and complaints His Highness was pleased to declare that, as had already been announced, it was his intention that measures should be devised for associating his subjects with the Government of the State. It was ordered that, as soon as the Commission appointed to inquire into complaints and disabilities had finished its work, a conference, at which the various interests concerned would be represented would meet to discuss the introduction of constitutional reforms in accordance with His Highness' intention.

7. **Constitutional Reforms.**—The Kashmir Constitutional Reforms Conference commenced its work about the middle of March 1932; its report was submitted in April. The Conference recommended that a Legislative Assembly should be established as soon as possible and made suggestions regarding its composition, powers and functions. At the same time the Conference suggested the appointment of a Committee to collect the necessary data on which further action could be based. His Highness in Council was pleased to accept the recommendations of the Conference.

In May a Franchise Committee was appointed under the presidency of Sir Barjor Dalal. In March 1933 Sir Ivo Elliot, Bart., I. C. S. (retired), was appointed Franchise Officer. The proceedings of the Committee were given the fullest publicity. Their report was submitted in January 1934 and by an order dated February 24th 1934, published in the Government Gazette, His Highness the Maharaja Bahadur was pleased to accept the recommendations of the Committee and directed that regulations be prepared to give effect to them. It was decided the Assembly should consist of 75 members; of these 33 were to be elected and 42 nominated. The elected members were to consist of 21 Muslims, 10 Hindus and 2 Sikhs and the nominated element comprised 12 officials, 14 non-officials and 16 State Councillors. The latter were selected from those

who, as ministers and in other capacities, had had long experience in the administration of the State. In the selection of nominated non-officials and State Councillors care was taken to ensure the representation of all communities, interests and localities. The majority of those competent to represent the views of the people giving evidence before the Franchise Committee had favoured separate electorates and this system was adopted. For various and sufficient reasons adult suffrage was not adopted; the chief of these were the low standard of education amongst the masses, the vastness of the area and the paucity of officers competent to conduct elections. The franchise was given on a liberal basis. In the case of women it was limited to those who had passed an examination equal to or higher than the Middle School Certificate. Candidates for membership of the Assembly were required to have attained the age of 25 and to be literate either in the Persian or Devanagiri script. A candidate for election was also required to be a registered elector of the constituency in which he stood and to have resided in the area for twelve months preceding the first day of the month on which the roll was published. It is unnecessary to discuss further the various stages preparatory to the inauguration of the Legislative Assembly. It is sufficient to say that the Praja Sabha (State Assembly) was formally inaugurated by His Highness the Maharaja Bahadur on October 17th 1934 in a special Durbar in the Rajgarh Palace. By Regulation No. I of 1991, which is the foundation of the existing constitution of the Jammu and Kashmir State, all ultimate powers are reserved to His Highness the Maharaja Bahadur. Under the same regulation certain subjects are reserved which it is unnecessary to give in detail here. The administration and government of the State is vested in a council of ministers presided over by the Prime Minister. The Praja Sabha has the power of interpellation, of passing resolutions, of discussing the budget and of introducing and passing legislation. Its authority is adequate in that, subject to certain provisions, it has the power to legislate for the whole State or any part thereof and for all subjects of the State wherever they may be. In cases of emergency, His Highness may give assent to an ordinance submitted by the Council but such ordinance shall become law for a period not exceeding six months. Copies of money bills involving the imposition of a new tax or duty or increasing an existing tax or duty must be supplied to every member of the Praja Sabha and a day or days allotted for discussion to enable members to ask questions and move resolutions. If a resolution be passed the bill in question cannot be passed

until the resolution concerning it has been taken into consideration. The annual budget is placed before the Praja Sabha which has the power to ask questions and to move resolutions concerning it. If a resolution on the budget is supported by a majority of votes the President of the Praja Sabha is required under the rules of procedure to declare what action, if any, the Council will take on the resolution. Legislation relating to or affecting the religious rights, ceremonies, endowments or personal law of any community cannot be introduced without the previous sanction of His Highness the Maharaja Bahadur and the consent in writing of not less than two-thirds of the members of the Praja Sabha belonging to the community affected. Every bill passed by the Praja Sabha requires the assent of His Highness who may assent to the bill or return it for reconsideration. The constitution sanctioned under Regulation No. I of 1991 remained in force upto 27th Bhādon 1996, corresponding to 7th September 1939, when His Highness the Maharaja Bahadur was pleased to repeal the Regulation and promulgate the Jammu and Kashmir Constitution Act No. XIV of 1996 in its place. The new Act effected certain improvements in the text of the Regulation No. I of 1991 which were considered necessary. It defined the constitution and powers of the High Court of Judicature and provided for the establishment of a Board of Judicial Advisers to assist His Highness the Maharaja Bahadur in the disposal of appeals against the decisions of the High Court and such other matters as His Highness might choose to refer to the Board for advice.

On the 11th February 1939 His Highness the Maharaja Bahadur had been pleased to announce another instalment of constitutional reforms which extended the powers of the Praja Sabha and gave the representatives of the people greater opportunities of associating themselves in the administration of the State. Briefly, this further instalment of reforms reduced the number of nominated members of the Praja Sabha and increased the number of elected representatives to 40 in a House of 75, provided for the creation of four posts of paid Under-Secretaries to be filled by non-official members and created the post of Deputy President of the Praja Sabha to be filled by the election of a member of the Praja Sabha. It laid down that the annual financial statement, so far as it relates to items not charged to the revenue of the State, should be submitted to the vote of the Praja Sabha in the form of demands for grants. By the new provisions legislation relating to taxes, as distinct from fees and

penalties, which was previously initiated by the Council of Ministers, was brought within the authority of the Praja Sabha subject to certain restrictions. Whilst these constitutional reforms give the representatives of the people ample opportunity to associate themselves with the administration and government of the State they in no way impair the inherent powers of His Highness the Maharaja Bahadur. Members of the Praja Sabha enjoy freedom of speech and no member is liable to proceedings in any court in respect of anything said or vote given by him in the Praja Sabha or any committee thereof or in respect of the publication by or under the authority of the Praja Sabha of any report, paper, vote or proceedings.

8. **The Legislature.**—Since it was inaugurated in 1934 the Praja Sabha has passed much useful legislation; it has solid achievements to its credit. Up to the end of 1940 nearly a hundred of its bills had received the assent of His Highness the Maharaja Bahadur and had become Acts. These cover a wide field and relate to the suppression of traffic in women, prevention of infant marriage, excise, State aid to industries, panchayats, criminal law, civil procedure code, land alienation and right of prior purchase, co-operative societies, aid to agriculturists and land improvement loans, grain control, stamps, income-tax, land revenue, press and publications, court fees, grazing, tenancy, wireless telegraphy, water-mills, tolls, preservation of ancient monuments, town planning and improvement, partnerships, transfer of property, insurance etc. Many of these are amendment Acts; some represent original legislation. The list is sufficient to indicate that the Praja Sabha has a very real say in legislation affecting the living conditions of the people. This is a factor of importance when we are considering the ability of the country to support an increasing population. The provision of adequate means of subsistence for all sections of the people is the most important of all problems when we have to consider the needs of a rapidly increasing population. Unless timely measures are taken misery must result and the problems of government increase in every direction. It is from this angle that the question of a rapidly increasing population must be considered in India. The existing standard of living of the masses is not such as to permit of any deterioration without results which may have grave repercussions. It was considered necessary to give some idea of the geographical, administrative and constitutional features in the State as a background before proceeding to discuss the results of the Census and their

bearing on the conditions now existing and likely to obtain in the future.

9. **Population.**—The facts regarding the composition and distribution of the population are given in Imperial Tables I and V and their subsidiaries and in State Table I.

Imperial Table I and State Table I together give detailed information concerning the area, houses and population of the State as a whole and of its districts and tehsils separately. The subsidiaries to Imperial Table I give figures showing the density of population for the whole State and various parts of it, details regarding cultivable and cultivated areas and the proportion of females to males for all districts.

Imperial Table II shows the variations in the actual population for the whole State and in each district for the past fifty years. Its subsidiaries show the percentage variations and changes in density for each decade and a comparison between the variations according to the Census returns and those shown by the vital statistics.

Imperial Table III and its subsidiary show the distribution of the urban and rural population in density groups and the proportions of the population living in each.

Imperial Table IV classifies towns according to population and shows the variations in the population of each since 1891. Its subsidiaries give the percentage variations and the number of females per thousand males in urban and rural areas respectively with separate figures for the two cities—Jammu and Srinagar.

Imperial Table V gives details of the urban population by communities separately for all towns in the State, by districts and for the State as a whole. Its subsidiaries show the number per thousand of the total population, and of each community, who live in towns for each Natural Division and the communal composition per ten thousand of the urban and rural populations separately.

It is not easy to visualise the size of a country by its area in square miles; comparisons usually give a more accurate idea. Jammu and Kashmir State (84,471 sq. miles) is slightly smaller than England, Wales and Scotland put together (88,749 sq. miles); in India it may be compared with Bihar and Orissa taken together (83,054 sq. miles), Hyderabad State (82,698 sq. miles) or with Bengal (77,521 sq. miles). But

area alone is of little importance; we are concerned with the people occupying any given area and more particularly with their numbers—the density of the population. The density figures for the whole State and by districts are given in Subsidiary (i) to Table I. There is no necessity to discuss them in detail here. It may however be observed that the figure for the whole State has risen to 48 against 43 in 1931. The 1931 density figures for Great Britain, which comprises England, Wales and Scotland, and for Bihar and Orissa, Hyderabad State and Bengal, which are comparable with the State in area, were 480, 454, 175 and 646 respectively. It must be remembered however that the State is one of the most mountainous countries in the world and that the figure for the State includes the mountainous wastes of the sparsely populated Frontier Districts; the figures for all other districts of the State compare well with those for Hyderabad's 175, the figure for Jammu Province being 160 and for Kashmir 202. The factors affecting density in any area are numerous but the greatest is probably industrialisation. In this respect the Jammu and Kashmir State cannot compare with Great Britain, Bengal and Bihar; it has a few industries but the more important of these—forest exploitation, sericulture and fruit growing—are closely allied with agriculture and the State must be described as almost entirely agricultural. If we consider the proportion of cultivable area to the total area (5·6 per cent.) it will be realised that the density is actually very high for the inhabited tracts and when we remember that the bulk of the population is dependent on agriculture it becomes obvious that a continuing increase of population at the rate of 10 per cent. per decade for a period of two generations is going to give rise to very serious problems in the absence of industrial development or more intensive cultivation. The pressure of population on the land is already a problem and fragmentation of holdings is probably proceeding faster than consolidation; the holding on which the average peasant family relies for its subsistence is gradually becoming smaller. The Frontier Districts have been cited above as sparsely populated mountainous wastes; the description is justified. Scrutiny of Subsidiary (i) to Table I will show that other areas are very mountainous too and that only 6·3 per cent. of Udhampur District is cultivable and 8·4 per cent. of Muzaffarabad. The most favourable conditions are found in the Jammu District but even here the percentage is only 38·5. The actual area cultivated in any district is even less. On this basis the density figures indicate rather serious overcrowding of the land; they

exceed 1,000 in most districts in the State and approach 2,000 in some areas of the Frontier Districts and in the Anantnag District. It is a simple matter for those who wish to go into details to calculate the actual figures for any particular district.

Since the State is so largely agricultural irrigational facilities and adequate rainfall are matters of prime importance; the figures for both are given in Subsidiary (i) to Table I. A steadily increasing population in an agricultural country requires an expanding area for cultivation or, in the absence of more land to put under crops, more intensive cultivation of existing areas; the latter is not usually possible without the use of fertilisers and an assured water supply and this points to the construction of more canals to ensure regular and ample irrigation. A considerable gap is shown in Subsidiary (ii) to Table II between the variation since 1931 according to the Census and the increase revealed by the Vital Statistics. The method of collecting and recording the Vital Statistics leaves much to be desired and too much reliance should not be placed on them. However, Col. Sir Ram Nath Chopra, I. M. S. (retd.), Director of Medical Services in the State has kindly written a note discussing vital statistics, diseases, epidemics and health matters generally which is printed as an appendix to this essay, and further discussion of the subject here is unnecessary.

10. **Migration.**—Another important matter affecting the population is migration. Imperial Table VI and its subsidiaries give the figures available; for reasons given in the notes to the table they are incomplete. However, it may be said at once that at the time the Census is taken, in the early spring of any year, the population of the State is at its lowest. In the past there has been little movement into the State or out of it from one year to another or from one decade to another which has any permanent effect on the population. As time goes on, if the population increases at its present speed, either the local means of subsistence must be increased by industrial development or the land must be made more fruitful. It is more than probable there will be both industrial and agricultural development as well as an increase in emigration. To return to the point. Both emigration and immigration are at present mostly seasonal. Since the great majority of emigrants leave the State chiefly for the Punjab and North West Frontier Province in search of employment, in the late autumn when their crops have been harvested

and return in the spring as soon as the snow is off the land and they can attend to field works, they are absent when the Census is taken at the end of February or early in March. The bulk of the immigrants to the State are either tourists who want to see the beauties of Kashmir or men and women from India, of every station in life, anxious to escape for a while from the heat and dust of the Indian plains to the coolth and restfulness of Kashmir and its many beautiful valleys. These visitors commence to arrive in March and have gone by the end of November; a few stay to become temporary residents; most of them are not here when the Census is taken. Besides these seasonal migrations there are movements which may be described as semi-permanent. From most districts of the Jammu Province, but more particularly from Poonch Jagir and the Mirpur District, men in considerable numbers leave their homes for fairly long periods at a time. Some are taken as recruits in the British Indian Army; others get employment as domestic servants, as seamen and stokers in the mercantile marine operating from Indian ports, as labourers on the railways or as traders both in and beyond India. These represent a loss to the population but from one decade to another, in the past, the numbers involved are believed to have been fairly constant. At the recent Census the numbers were probably higher than usual owing to the war and the impetus given to recruitment for the services and to all trades and industries meeting war requirements both directly and indirectly. Movements other than those mentioned are mostly purely local.

One more point demands mention owing to its bearing on the future population; this is the proportion of the sexes. Various aspects of the question are presented in different subsidiary tables but the position for the whole State and for each district for the last forty years is clearly shown in Subsidiary (iv) to Table I. Before discussing the activities of the various departments in the State and their bearing on our subject it will be convenient to refer to the communities which together constitute the population.

11. **The Muslims.**—The communities of the State are classified by religion. The details are given in Table XIII. Muslims are the most numerous. They number over thirty-one lacs and constitute 77·11 of the total population. During the decade they increased by 10·07 per cent. Over sixteen lacs live in the Kashmir Province and over twelve lacs in the Jammu Province (including Jagirs); the sparsely popu-

lated Frontier Districts hold just over 270,000 out of a total population of 311,478. Racially, most of the Muslims of the Jammu Province and its Jagirs are closely connected with the tribes of the Punjab and are of the same original stock as the Hindu elements of the population but the Gujjars are an important element. The Muslims living in the southern part of the Kashmir Province are of the same stock as the Kashmiri Pandit community and are usually designated Kashmiri Muslims; those of the Muzaffarabad District are partly Kashmiri Muslims, partly Gujjar and the rest are of the same stock as the tribes of the neighbouring Punjab and North West Frontier Province districts. The Muslims of the Ladakh District are mostly Mongolian (Baltis) by race but in the Skardu Tehsil many are of Dardic origin. In Astore and the various illaqas of the Gilgit Agency they are mostly Dards. There has naturally been a certain amount of inter-marriage between the Muslim elements of the different racial stocks since the large scale conversions to Islam from the fourteenth century onwards.

There were few, if any, Muslims in the territories now comprising the Jammu and Kashmir State previous to the beginning of the fourteenth century. These few infiltrated from the neighbouring areas of the Punjab into the Jammu Province. In the Kashmir Province the whole population for all practical purposes was Hindu up to about 1325 A. D. and in the Frontier Districts they were either Buddhists or belonged to primitive tribes. About this time Syed Abdur Rahman, better known as Bulbul Shah, obtained many converts to Islam. He was followed by Hazrat Mir Syed Ali Hamdani whose piety and learning made such a great impression on the people that large numbers are said to have embraced Islam. Islam continued to spread without any differences in its ranks up to the period of Sultan Hassan Shah. A little later Mir Shamas-ud-Din Iraqi arrived in Kashmir from Khurasan and commenced to preach the tenets of the Shia sect. He experienced many vicissitudes but eventually some of his followers gained influence at court and by 1554 A. D. Ghazi Chak, a Shia, became King of Kashmir. The dynasty lasted 32 years. There are said to have been acute differences between the two main sects of Islam—Sunni and Shia—during the period of the Chak dynasty which led Sunni elements to beseech Akbar the Great to conquer Kashmir. The two sects were on good terms during the Moghal period but at intervals since their relations have been strained. There are two minor Muslim sects which are offshoots of the Sunni sect, *viz.* Wahabis and Ahmadis. The

latter are also known as Qadianis. Both are of comparatively recent growth and numerically unimportant in the State. The majority of the Muslims in the State belong to the Sunni sect. At the recent Census Shias were recorded as such and numbered 205,999. In addition there are approximately 74,000 in the Gilgit Agency. At this Census Shias were not recorded as such in the Gilgit Agency but merely shown as Muslims. The total Shias in the Jammu and Kashmir State territories at the 1941 Census may therefore be taken as 280,000; the remainder, nearly all Sunnis, total 2,821,247.

Of the various castes and tribes making the Muslim element of the population those describing themselves as Kashmiri Muslims and Gujjars are by far the most numerous; the former numbered 1,270,261 at the recent Census and the latter 381,457. The next important in numerical order are Rajputs, Jats, Sheikhs, Baltis, Sudhans, Syeds and Moghals. The Rajputs, numbering over 226,000 are spread all over the Jammu Province with a few in Poonch Jagir. In the Kashmir Province they are mostly found in the Muzaffarabad District. Jats, over 121,000, are almost entirely located in the Jammu Province, the great majority living in the Mirpur District. The Sheikhs, nearly 110,000, are found in all districts of the State; the largest numbers are located in the Anantnag and Baramulla Districts of the Kashmir Province. Of the 99,348 Baltis all but a few hundreds live in the Skardu and Kargil Tehsils of the Ladakh District. Sudhans, 78,000, are almost entirely found in the Poonch Jagir and the Mirpur District. Syeds, 52,000, and Moghals, 42,000, are found in every district of the State; the largest numbers are in Poonch, Mirpur and Muzaffarabad. There are a fair number of Syeds in the Anantnag District. The full details of all the important elements of the population are given in Table XIV.

There is no occasion to say much about the Kashmiri Muslims in spite of their numerical importance. They have lived in Kashmir since ancient times and previous to their conversion to Islam from the early fourteenth century onwards were a part of the resident Hindu population of Kashmir.

12. **The Gujjars.**—The Gujjars are in a different category; their origin and first appearance in the State are not definitely known. At the recent Census they numbered 381,457 which is 21,324 less than in 1931. This decrease cannot be accounted for unless it is due to the fact that in many cases they did not describe themselves correctly. Muslims as a whole show

an increase in numbers which compares favourably with the increase of population for the whole State. There is no reason to believe that the Gujjar element of the community was an exception to this tendency. Gujjars show a decrease in the districts Reasi, Poonch and Chenani in the Jammu Province and for all districts in the Kashmir Province. The tabulation of figures for the Gilgit Agency did not separate the various elements of the population. In 1931, 2,454 Gujjars were recorded as living in the Gilgit Agency. However, it is not necessary to attempt to account for the variations; to do so would be pure guess work when we have no reliable evidence to explain the decrease.

The early history of the Gujjar tribe is obscure; there are several theories as to their origin. It is suggested, with diffidence, that the theory that they came to India from Central Asia, from a region in the neighbourhood of the Caspian Sea, is as good as any. That they came to the territories now known as the Jammu and Kashmir State by way of the Punjab and the North West Frontier Province does not appear to be disputed. Historians seem to be satisfied that tribes called "Gurjaras" were established in the areas now known as Gujarat and Kathiawar from about 600 A. D. onwards. It is believed that these and other sections of the tribe were the ancestors of those now known as Gujjars in this State. The "Gurjaras" were Hindus at the time they are first noticed in India whatever faith they may have professed previous to their migration to India. They had apparently established a kingdom of their own at the time of Harsha about 640 A. D. but were probably under his suzerainty. Their country was to the south of Sind and extended roughly to the Gulf of Cambay. It seems that they successfully resisted the Arab invasion from the north early in the 8th century A. D. It is alleged that about 750 A. D. the Chapa dynasty of the Gurjaras, which had been in power for about 200 years, was displaced by the Pratiharas who seem to have carried on till about 1000 A. D. when their power was broken by the coming of Mahmud of Ghazni. Nothing much appears to be known of the Gurjaras in the Punjab until 890 A. D. when Raja Shankervarman of Kashmir is said to have invaded Gujarat, the Gurjara kingdom ruled over by one Lakhandev. A region known as Tekka, situated in the area now known as the Punjab, was ceded to Shankervarman. The Gurjara kingdom of Gujarat mentioned does not correspond to the present Gujrat District of the Punjab but the present district of Gujrat is

believed at one time to have been a part of it. It is reasonable to presume that Gurjara tribes had extended to the Punjab and it is probable that such places as Gujrat, Gujranwala, Gujarkhan and Gurdaspur, where Gujjar families are still found, derived their names from this fact. The Gurjara kingdom ceased to exist in the time of Akbar the Great when their country was annexed. By this time a number of Gujjars, as we will now call them, had embraced Islam and from now onwards the connection of the northern section with their Hindu ancestors becomes less and less. No claim is made for the historical accuracy of the brief summary given above of the probable early history of the Gujjar tribes. It is nothing more than a summary of the views given in various works in an attempt to link the Gujjars now living in the Jammu and Kashmir State with those believed to have been their ancestors. The migration of a part of the tribe to the territories now known as the Jammu and Kashmir State is attributed to the outbreak of a serious famine in the regions inhabited by the tribe, now known as Rajputana, Gujarat and Kathiawar. The exact period has not been fixed but it is known as the "Satahsiya Famine". It is stated that some parts of the migrating tribes moved to the Punjab whilst others moved further north to the areas now known as Kaghan, Swat, Hazara, Kashmir and Gilgit. The same source states that the Gujjars now living in the Jammu and Kashmir State are parts of two separate migrations, one direct from the Gurjara tribes of Rajputana, Gujarat and Kathiawar, the other, and later migration, from the Gujjar tribes settled in the Punjab. It is stressed that there are still Gujjar families living in the Sialkot, Gujranwala, Gujrat, Jhelum and Rawalpindi Districts of the Punjab. Some Gujjars now living in the Bhimber and Rajouri Tehsils of the Mirpur and Reasi Districts of the Jammu Province claim that their ancestors came from the Gujrat District of the Punjab. It is probable that many of them followed in the wake of the Moghal rulers who used to visit Kashmir. The route of the Moghals from Delhi is known to have been through Gujrat, Bhimber, Rajouri, Behramgala and Shopian to Srinagar. Gujjars have been settled for many generations all along this route. It is on record that the older inhabitants of Bhimber complained to Akbar the Great when he was on his way back to Delhi from Kashmir that the Gujjars were a source of annoyance and suffering to them. The inhabitants of Sialkot made similar complaints. In the 17th century there were Gujjars of high official status in Poonch. They lived at Lohar-Kot or

Loherene, now known as Loran, in the Haveli Tehsil of the Poonch Jagir. They provided ministers to assist the rulers of the area. At the end of the 18th century one of their leaders named Ruh-ullah Khan obtained full control of the country and assumed the title of Raja. He was the most important Gujjar personality of the time. He was Wazir to Raja Khan Bahadur of Poonch. On the murder of the latter, Ruh-ullah Khan ruled as the deceased Raja's representative until he got his own son, Amir Khan, declared Raja of Poonch in 1797 A. D. Ruh-ullah Khan died in 1819 and Amir Khan about 1825. The latter was succeeded by his son, Mir Baz Khan, who was conquered by Maharaja Ranjit Singh of the Punjab. Mir Baz was removed to Lahore where he was murdered by one Pir Bakhsh Khan Chib in 1837 A. D. The dynasty started by Ruh-ullah Khan was known as the Sango line of Gujjars. With the disappearance of Mir Baz Khan their short period of power came to an end and the status and influence of the Gujjars gradually deteriorated. No outstanding Gujjar has since appeared in the State comparable with Ruh-ullah Khan. As the generations have passed since his time, the Gujjar tribe throughout the State has become less important in all respects except in numbers. With the advent of the Sikhs it would seem that the Gujjars split up. Probably small groups of them migrated to different areas in the State away from close contact with Sikh rule. Some probably moved along the old Moghal route through Bhimber and Rajouri to Kashmir *via* Shopian and others over the hills from Poonch to the districts of Baramulla and Muzaffarabad. From these areas they have spread to all districts of the State. The wealthier of the Gujjars keep herds of buffaloes, cattle, sheep and goats; nearly all follow agricultural pursuits. They are no longer nomadic by inclination but settle wherever they can. In almost every nullah in the country a family of Gujjar squatters will be found high up above the ordinary levels of cultivation. They cultivate land at an altitude well beyond the limits of ordinary village lands and do a great deal of damage to forests in the process. The Bakarwals are a nomadic element of the Gujjar tribe; they keep large herds of sheep and goats and a certain number of buffaloes and cattle. Their goats do great damage to forest areas. Whether the assumptions with regard to the early history of the Gujjars and their arrival in this State set forth above are well founded or not, the fact remains that they are in the greatest numbers in the Jammu, Reasi and Poonch Jagir Districts of the Jammu Province and the Muzaffarabad,

Baramulla and Anantnag Districts of Kashmir. With the exception of the Gujjars of the Jammu District the community shows little interest in education and in this respect is very backward. The Gujjars of Jammu District are advanced compared with Gujjars in the rest of the State. This is probably due to the fact that they live close to, and have come more in contact with, civilizing influences than other sections of the tribe. The percentage of literacy amongst the rest of the Gujjars is very low. They are a valuable element of the State population but unless they make some effort to acquire at least the rudiments of education the community as a whole is doomed to recede lower in the social scale.

13. **The Hindus.**—The Hindus in the State, including the Scheduled Castes but excluding Sikhs and Jains, total 809,165 or 20·12 per cent. During the decade they increased by 9·90 per cent. The most important numerically are the Brahmans, the Rajputs and the Kashmiri Pandits. Their numbers at the recent Census were 198,004, 168,582 and 76,868 respectively. The number of Brahmans living in the Jammu District is over 63,000. In Kathua and Udhampur Districts there are over 35,000 in each case. Reasi comes next with nearly 30,000 followed by Poonch Jagir with over 19,000 and Mirpur District with over 14,000. There are some 1,335 in the Chenani Jagir. In other districts of the State their numbers are negligible. The Hindu Rajputs are found in large numbers in the Udhampur District with over 61,000, followed by Kathua and Jammu with over 36,000 and 35,700 respectively. Reasi comes next with nearly 21,000 and Mirpur with over 8,000. Their numbers in other districts are very small. Most of the Kashmiri Pandits are residents of Srinagar; over 62,000 live in the Anantnag District in which Srinagar City is situated. Another 11,000 were recorded in Baramulla District. The figures do not exceed a thousand in any other district except Jammu which has 1,367. The Kashmiri Pandits community has a higher standard of literacy than any other. This fact gives it an importance out of all proportion to its comparatively small numbers. The Scheduled Castes together number 152,536. The numbers for each caste and their distribution throughout the State are given in Part II of Table XIV. Adherents of the Arya Smaj movement numbered 87,356. In Table XIII they are included with "Other Hindus". In 1901 they numbered only 79. Reference need only be made to three other elements of the Hindu population *viz.* Khattris, Jats and Mahajans; the two former exceed 25,000.

and the latter 23,000. The Khattris are mostly found in Jammu Province, particularly in the Jammu and Mirpur Districts. Each of the other districts has a small number. There are few outside Jammu Province although some 2,000 were recorded in the Muzaffarabad District. Of the 25,000 Jats over 16,000 live in the Mirpur District and over 7,000 in Jammu District. There are 1,430 in Kathua. Elsewhere the numbers are small. Over 10,000 Mahajans live in Jammu District and over 4,000 in Udhampur. Each district of the Jammu Province has its quota. There are very few in other parts of the State. There is little new to be said about the origin of the Hindu elements of the population. Most of them are descended from the indigenous population of the area. Their history goes back to very early times and is rather a subject for the historian. Numbers of them have migrated to British India during past centuries and the community here has received accessions to its numbers by immigration from British India, chiefly from the neighbouring areas of the Punjab. A note on the Dogra Hindu-Rajput community, of which His Highness the Maharaja Bahadur of Jammu and Kashmir is the head, has recently been produced and published by Thakur Lakshmansingh Charak of Jammu and can be obtained easily, by those desirous of details. An interesting genealogical table of His Highness' family is given with the note which traces the Ruling Family's descent back to Maharaja Sudarshan of Ajodhya.

14. **The Sikhs.**—The Sikhs number 65,903. They form only 1·64 per cent. of the population but are increasing at a higher rate than any other community. They increased by 30·08 per cent. during the decade. They are found in varying numbers in every district of the State. The largest aggregations are in Poonch Jagir (14,887), Muzaffarabad (12,922), Mirpur (12,111), Jammu (9,151), Baramulla (8,458) and Anantnag (5,654). Whilst the main influx of Sikhs to the country followed its conquest by Maharaja Ranjit Singh of the Punjab there is evidence to show that there were Sikhs in small numbers in the country as early as the sixteenth century. Guru Nanak visited Kashmir and is said to have made converts. The Gurdwara at Martand commemorates his visit. Guru Hargobind also visited Kashmir by way of Sialkot and probably followed the Moghal route. Gurdwaras at Srinagar, Baramulla and Muzaffarabad commemorate his visit. His teaching probably resulted in a number of the inhabitants of Srinagar and the neighbouring villages embracing Sikhism. Possibly he left behind some of his disciples to carry on his work. Sikhism cannot be said to be

indigenous; a few local converts don't make it so. However, it is clear that its existence in the State goes back to a date before the advent of Sikh rule. As already remarked, its beginnings in the Kashmir Province at any rate, would appear to date from the visits of Gurus Nanak and Hargobind. A story appears in previous Census Reports from 1911 onwards to the effect that during the period 1751-1762 A.D. certain mercenary troops were engaged by Raja Sukhjiwan, Governor of Kashmir at that time, to assist him to assert his independence against his master, Emperor Ahmad Shah Durrani of Kabul. According to the story these mercenaries embraced Sikhism in the time of Maharaja Ranjit Singh and were called "Jinsi Sikhs" from the fact that they were in receipt of jins (grain) as military rations. Later, they are said to have settled in various parts of the country and to have started the Sikh settlements now found at such places as Tral, Hummal, Baramulla etc. The story is a bit confused; it states that Raja Sukhjiwan "brought Jinsi Sikhs from Pothwar and the adjoining hills" and goes on to say that "they embraced Sikhism in the time of Maharaja Ranjit Singh". These statements are contradictory. Ranjit Singh did not come on to the scene until long after 1762. If any mercenaries embraced Sikhism in the time of Ranjit Singh they could not have been those brought in by Sukhjiwan. It is possible the mercenaries brought in by Sukhjiwan were Sikhs and not Punjabi Brahmans as has been stated in earlier reports. It is also possible that the descendants of these mercenaries, who may have been Punjabi Brahmans, were here when Ranjit Singh conquered the country and that either they entered his service as Sikhs or embraced Sikhism then. In those days land revenue was collected in kind with the assistance of the military. The unit employed was known as the Nizamat Paltan which consisted of Sikhs. It is probable that these men became known as "Jinsi Sikhs" to distinguish them from the members of other Sikh units because of their association with the collection of grain (jins). This, of course, is pure conjecture but then the story of Raja Sukhjiwan and his "Jinsi Sikhs", although going back to the Census Report of 1911, is only based on a story related by a certain official at the time of the 1911 Census. Whether there was any influx of Sikhs in the period 1751-1762 or not, it is clear that, although there were Sikhs in the country previously, most of them now living in the State are the descendants of those who came to the country with Ranjit Singh's invading army and during the period of Sikh rule (1819-1846). This is supported by the fact that the largest aggregations of Sikhs

are found in those areas of the State closest to the Punjab which had close associations with the Sikh court at Lahore. Ranjit Singh first attacked Jammu in 1808. The Sikhs were not successful at their first attempt to conquer Jammu. But by 1809 Gulab Singh, later the first Maharaja of Jammu and Kashmir, had joined the Sikh army at Daska, near Sialkot at Ranjit Singh's request. It is reasonable to presume that Sikhs commenced to enter the Jammu Province in considerable numbers from this date onwards up to the time of the fall of the Sikh kingdom in 1846.

15. The Buddhists. The next in order of numerical importance are the Buddhists. Their home is Ladakh. There are 40,696 of them. They have increased by 5 per cent. since 1931. Very few leave their own country for long. At the Census all but 532 were enumerated in Ladakh. They live in the Ladakh Tehsil and in that part of the Kargil Tehsil adjacent to it. There are none in those portions of the Kargil Tehsil adjoining Kashmir or the Skardu Tehsil. A few live near Padar in the Kishtwar Tehsil of the Udhampur District which lies on the western borders of Zaskar in the southern part of the Kargil Tehsil. The Buddhist community shows a far smaller increase in numbers than any other. This has been the case since the beginning of Census taking. In 1911 it was attributed partly to the practice of polyandry and partly to conversions to Islam. These conversions are not so numerous as to be noticeable and most occur as a result of intermarriage. The scarcity of cultivable land, the absence of forests and the lack of water for irrigation are not conditions favourable to an increase of population. If we add the practice of dedicating both boys and girls to their monasteries in considerable numbers to lead a life of celibacy it is not surprising that the community shows a small rate of increase. In fact, it is the nature of the country itself which has probably given rise to the practice of polyandry and to the dedication of boys and girls to the monasteries. The country cannot support an increasing population in existing conditions and the numbers of the Buddhist community are unlikely to expand much until the conditions in their country alter very considerably. As it is, most of them eke out a bare existence.

16. Other Communities.—The members of the other communities living in the State are so few in number as to call for little comment. They are Indian Christians (3,079), European and Anglo-Indian Christians (430), Jains (910), Parsis (29), Jews (11), Primitive Tribes and Others (146).

Of these Indian Christians have shown a considerable increase as compared with 1931 when they numbered 1,942. European and Anglo-Indian Christians have increased from 321 to 430. The Jains have increased from 597 in 1931 to 910; of these 895 were recorded in Jammu City.

17. Social Customs.—Social customs are bound to have some effect on the rate of increase of the population, certainly those relating to marriage, divorce and re-marriage. It is probable that the customs of the various elements of the population, as much as any other factors, account for the variations in the increase of the four main communities of the State—Muslims, Hindus, Sikhs and Buddhists.

As already remarked, the Sikh community shows a very big increase. It is so large that it is permissible to adduce reasons other than a natural increase of population. The most likely other cause for this phenomenal percentage (30·08) is defective tabulation in the past due to wrong answers given in the Census record. For instance, at the recent Census a reference was received asking if Sikhs could describe themselves as Brahmans under race, tribe or caste. The answer was in the negative. However, if we examine their social customs we find they provide favourable conditions for an increasing population. The expenses connected with the marriage ceremony are not unduly high, there is little caste restriction, the parties to a marriage have considerable freedom of selection, widow re-marriage is recognised, purdah is not practised and migration is negligible. Even before the 'Infant Marriage Act' was passed by the legislature in 1985 (1929 A. D.) the marriage of immature boys and girls was unusual. The Sikhs are monogamous; this is an important point in a country where there is a deficiency of females. All the customs mentioned are favourable to an increase. Further, the community welcomes converts but one seldom hears of a Sikh apostate although the possibility of their existence is not contested.

The Muslims show the next highest rate of increase. As in the case of the Sikhs there are no caste restrictions and the parties to a marriage enjoy a considerable measure of freedom of selection if they be of mature age. Divorce is recognised and the remarriage of widows approved. Converts are readily accepted. The factors cited are all favourable to a natural increase of population. The marriage of immature boys and girls is an adverse factor; so also is the practice of polygamy. Infant marriages

were common before the passage of the Infant Marriage Act and it is believed the custom still persists. Although Islam permits a man to have more than one wife at a time, it is the exception rather than the rule for Muslims in the State to practise polygamy. Purdah is strictly observed by a considerable portion of those living in urban areas and where accommodation is restricted the lack of fresh air and exercise must re-act adversely on the birth of healthy children. The fact that in some areas large numbers of Muslim men migrate temporarily may be reckoned as a minor adverse factor.

The customs prevalent amongst Hindus are not so conducive to an increase of population as those followed by Sikhs and Muslims. The expenses connected with the marriage ceremony are usually heavy, caste restrictions are considerable, freedom of selection between the parties to a marriage is unusual, the marriage of immature boys and girls was the rule rather than the exception before the passing of the Infant Marriage Act, divorce is not recognised and widow re-marriage is not permitted except by a small section of the community, purdah is observed to a considerable extent in urban areas. These may all be termed adverse factors. Hindus are usually monogamous but more than one wife is recognised in certain circumstances, more particularly in the absence of a son. Converts are very few as it is not a proselytising religion except amongst a small section. The Arya Samajists advocate the abolition of caste restrictions in the matter of marriage, encourage widow re-marriage and are ready to accept converts; indeed they make proselytism a part of their activities. But these innovations are obnoxious to the conservative castes.

We have not far to go to seek the reasons for the small increase in the Buddhist community. The practice of polyandry is sufficient in itself. If we add to this the fact that it is customary for every family to dedicate at least one of its younger sons to a monastery to become a monk and at least one girl to become a chomo or nun and live a life of celibacy, it is a matter for surprise not that the percentage increase is small but that it should be as much as 5 per cent. Recently legislation has been passed by His Highness' Government, at the instance of what may be termed the young Buddhist Party, prohibiting the practice of polyandry and rendering those who infringe this legislation liable to severe penalties. It remains to be seen whether this legislation has the support of the majority of the community. If it has,

the next Census should show a greater percentage increase in the population of the Buddhist community unless other equally effective measures are adopted to check such an increase.

The passing of the Infant Marriage Act is bound to have an effect on the Muslim and Hindu communities in particular over a period of years. Medical authorities have satisfied themselves that there is a greater measure of fertility in marriages between those of mature age than in the case of infant marriages. There is also less infantile and maternal mortality. This legislation is therefore likely to operate in favour of a larger percentage increase in the future in the case of those communities previously practising child marriage. In the past, female infanticide is believed to have been prevalent, particularly amongst the Rajputs. His Highness the Maharaja Bahadur of Jammu and Kashmir initiated several measures to encourage those who used to practise this custom to desist. If the various social reforms initiated, which may be said to have been in an embryonic stage during the decade just completed, have the approval of the majority and receive their active support the returns at the next Census should reflect a more even percentage increase in the population of the three chief communities. The Buddhist community must always show a smaller increase until conditions in the country they occupy and their social customs change very considerably.

18. The Revenue Department.—Agriculture plays such an important part in the life and economy of the country that it would be well to study the conditions rather closely. Except for those areas under the administration of the Government of India, on behalf of the State, the country is divided into districts and tehsils under the executive control of the Revenue Department at the head of which is the Revenue Minister who is assisted by a Revenue Commissioner and a Director of Land Records. The senior revenue officer in each of the two provinces of Jammu and Kashmir is called the Governor of the Province. District officers are called Wazirs, tehsil officers, Tehsildars and the latter's assistants, Naib-Tehsildars. There is no need to go into the details of the army of overseers, surveyors, clerks, girdawars, qanungoes, patwaris, chaprassis, zaildars, lambers and chowkidars, who together make up the staff of the Revenue Department; their numbers are legion and so are their duties. As the name of the department indicates its primary function is the collection of land revenue.

19. **The System of Land Tenure.**—Before discussing the activities of other departments whose work affects agricultural conditions let us examine the system of land tenure. During the Moghal, Pathan and Sikh periods the lot of the peasant was very hard. In the Kashmir Province he possessed neither proprietary nor occupancy rights. All land was owned by the State. The cultivator was permitted to occupy the land only so long as he paid the rent when it became due; he could neither sell nor mortgage the land he occupied. The system of assessment in those days must be described as harsh. The State's share was not less than $\frac{3}{5}$ of the gross produce and, allowing for unauthorised exactions, the cultivator's share probably did not exceed $\frac{1}{3}$. Conditions in the Frontier Districts were the same; in the Jammu Province they were better. The descendants of the original occupants of the land in Jammu held proprietary rights; many of the proprietors were land-holders of long standing and cultivated their own land; other cultivators were tenants-at-will. It was the custom to collect the revenue in kind on an estimate of the crops. The State share varied; it was $\frac{1}{2}$ from owners, $\frac{2}{5}$ from cultivators resident in the village cultivating State land and $\frac{1}{3}$ from cultivators belonging to another village. Usually the land was held by hereditary village proprietor with hereditary tenants under them cultivating the land. The revenue demand was heavy with the result that payments frequently fell into arrears and the State took possession of the land. The rights of some proprietors were confiscated as a punishment for acts of rebellion and disloyalty. In this way many villages and parts of villages became the sole property of the State. From time to time re-measurements and re-assessments were carried out but the methods were not such as could be termed accurate. With the advent of the Dogra dynasty under Maharaja Gulab Singhji Bahadur (1846-58), the conditions both for the proprietor and the tenant were eased a bit for new lands brought under cultivation. In the time of Maharaja Ranbir Singhji Bahadur (1858-85) the State share of the crops was reduced and revenue was made payable in cash or kind at the wish of the cultivator but it was not until the reign of Maharaja Sir Pratap Singhji Bahadur (1885-1925) that a Regular Settlement was carried out to determine the rights of the cultivator and to put revenue assessment on a proper basis; this was commenced in 1887 and completed in 1914. The Settlement operations gave to the cultivator something he had never enjoyed before—security of tenure and a fixed cash assessment. The State still retained ownership of large areas. With the proper measurement of land and

assessment of revenue the State share was reduced to about 30 per cent. of the gross produce. In addition, Patwari and Lambardari cesses were levied which amounted to 2 per cent. and 5 per cent. respectively, on the amount of each individual's assessment. Since the first Regular Settlement, revision has been carried out in all tehsils and in some of them twice. The incidence of land revenue has been further reduced and now amounts to about 25 per cent. of the gross produce plus the Patwari, Zaildari, Lambardari, Sanitation, Education and Road Cesses. These together amount to about $12\frac{1}{2}$ per cent. on the actual revenue payable which brings the total up to about 28 per cent. of the gross produce. At the time of the first Regular Settlement in Jammu Province the rights of those possessing lands were recognised and they were recorded as owners; other areas which for various reasons had passed into State possession were recorded as owned by the State. The tenants of State owned land were recorded as tenants-at-will or occupancy tenants according to the period they had been in possession. They were required to pay 'Malikana', over and above the ordinary revenue assessment; the rate of Malikana varied according to length of possession. The tenants of proprietors, other than the State, were usually required by their landlords to pay the revenue assessment due plus 'Malikana' or rent in kind as might have been previously agreed upon. In 1912 to commemorate the coronation of His Majesty King George V all tenants-at-will of land owned by the State were granted full occupancy rights. At the time of the first Regular Settlement in Kashmir Province established cultivators were given 'assami' or tenancy rights. The concession permitted an 'assami' and his heirs to hold the land occupied in perpetuity so long as the revenue assessment was paid but gave no right of transfer either by sale or mortgage; ownership remained with the State. The same concessions were given to the landholders and cultivating tenants of the Frontier Districts in similar circumstances.

Thus, throughout the State, the reign of His late Highness Maharaja Sir Pratap Singhji Bahadur brought relief; for the first time the cultivator was given a fair assessment and security of tenure. Since the present Ruler, His Highness Maharaja Sir Hari Singhji Bahadur, came to the throne in 1925 the conditions of life for the cultivator have been improved enormously. At the time of His Highness' coronation or Raj Tilak in 1926 important concessions were announced which took the form of grants of State-owned land to village communities. In

1933 His Highness was pleased to confer proprietary rights on occupancy tenants of State land and those with assami rights and remitted the payment of 'Nazrana' usually levied on such occasions; the Malikana payable by occupancy tenants over and above the amount assessed for revenue was also remitted. These concessions, following those already made, greatly improved the status of the cultivator and in thousands of cases changed his position from a serf to a land-holder.

To protect the thousands of newly created land-holders in the Kashmir Province and the Frontier Districts from the consequences of their own improvidence a Land Alienation Act was passed to control the transfer of land by sale or mortgage. The Act disallowed the transfer of the newly acquired rights to any but a member of the agricultural classes and prohibited the alienation of more than 25 per cent. of any holding for a period of ten years. After the lapse of the period mentioned the provisions will be reviewed. A Pre-emption Act was also passed in order to protect family and village interests and to keep the land as much as possible in the possession of real cultivators. Whilst the status of the peasant cultivator has improved throughout the State in the past fifty years beyond the dreams of his ancestors, the position is not free from difficulties and dangers. The 'assami' now owns his land and has security of tenure but he must be taught to value these rights to the full and to pass on his inheritance to his sons intact. It is all too easy to dissipate the problems of the present by mortgaging the future; the right to alienate up to 25 per cent. of land holdings has been exercised in the full in hundreds of cases in liquidation of debt. These sales have increased the fragmentation of holdings, which is already a difficult problem, and have resulted in the transfer of much land to members of the agricultural classes who are not cultivators. The tenant or paid agricultural labourer seldom works as conscientiously as the owner cultivator. Alienation of land on a large scale to non-cultivating owners is bound to lead to a reduction in the aggregate food grain supplies produced in the country. This in turn must lead to greater difficulty in the feeding of a rapidly increasing population. Figures showing the average size of holdings in the two provinces Kashmir and Jammu have been supplied by the Land Record Department; they vary from 16 acres in the Jammu District to 2½ kanals in the Anantnag District; there are 8 kanals to an acre. The average holding is 6 kanals in Baramulla and just under 6 in Mirpur. These

figures indicate the extent of fragmentation of holdings which already exists. Efforts have been made to bring about the consolidation of holdings but the results to date are not encouraging. The Land Records Department reports that since the cultivator was given proprietary rights and the right to alienate up to 25 per cent. of his holding, that is to say during the past decade, large numbers of land transfers have taken place. The most common cause is debt, either inherited or accumulated, usually as a consequence of improvident habits. In Kashmir, the desire to own land on the part of the richer classes of people living in Srinagar is strong. Prices have soared; land previously valued at Rs. 20 per kanal is alleged to have been sold recently at Rs. 300 per kanal. When His Highness gave the cultivator ownership of the State land he occupied previously as a tenant and the right to alienate a part of it he gave him not only independence but the means to liquidate his debts and to make a handsome profit at the same time. It should be repeatedly impressed upon the cultivator that unless he acts wisely the great concessions he has received may well become a curse. If due to extravagance and improvidence on the part of the present peasant-owners a large proportion of the cultivable area passes from the ownership of the actual cultivator into the possession of non-cultivating classes and absentee landlords the children of the present peasant-owners will be dispossessed and revert to the position of serfs and labourers. The present position as regards the supply of food grains, which is by no means easy, may well be greatly aggravated. The wisdom of restricting the peasant's powers to alienate his land heritage is obvious.

With the object of helping agriculturists to avoid debt and to encourage the development and improvement of cultivable areas His Highness' Government passed the 'Aid to Agriculturists and Land Improvement Act' in 1936. Under this act loans are made available on easy terms to any proprietor or occupancy tenant of agricultural lands for any purpose directly connected with agriculture. In 1937 a 'Kahcharai Act' was passed by which every landholder or tenant is permitted to keep one buffalo for domestic purposes free of Kahcharai or grazing tax.

It is correct to say that conditions of life for the peasant have been transformed in the State since the Dogra dynasty was established by Maharaja Gulab Singhji in 1846. The improvements were slow to begin with; the speed was accelerated from 1890 to 1920. During the last two decades the progress has been rapid.

20. **Agriculture.**—Measures to improve conditions of living for the cultivator have not been confined to the grant of proprietary rights and security of tenure. The activities of the Agriculture, Veterinary, Co-operative and Rural Development and Panchayat Departments are all directed towards the improvement of the conditions under which the agricultural classes live and work and the introduction of more efficient methods. During the past decade the staff of the Agriculture Department has been strengthened in all directions; demonstrations and propaganda have been increased. The chief food crops grown are rice, maize, wheat and barley in the Kashmir Province, maize, bajra, wheat, rice and barley in the Jammu Province and maize, wheat, barley and gram—a kind of barley grown at high altitudes—in the Frontier Districts; the latter is an important crop in the Ladakh District. During the decade the Director of Agriculture has succeeded for the first time in developing successful types of local rice and wheat by pure line selection; improvement has also been effected by the introduction of selected foreign seed for such crops as sugarcane, wheat, maize and vegetables. The distribution of selected seed and improved implements has been increased; this is important if the same area of cultivated land is to support a rapidly increasing population. His Highness' Government has become a constituent member of the Imperial Council of Agricultural Research and funds have been sanctioned for two research schemes; one is connected with fruit tree pests and the other with rice. The peasant is very conservative and is loath to change his methods; he has every reason to be reluctant to give up methods which have given him and his ancestors fairly good results until he has been convinced that the new methods advocated are better than his own. He knows from practical experience what his land can produce best and he knows its limitations. The cultivator's inherent dislike of change makes it absolutely essential that new methods be tested and demonstrated in as many places as possible and as often as possible and that propaganda be well conceived and continuous. This policy the Agriculture Department is endeavouring to implement by means of demonstration, tours, the holding of agricultural shows, the opening of demonstration plots and the issue of booklets and hand bills free of charge. Some advance has been made but conversion from old ways to new is a long term undertaking requiring persistence and patience. Little progress has been made in the use of manures; cattle dung, which is the obvious agent for increasing the fertility of the soil, is very largely burnt as fuel in the Jammu Province; a little is

used to manure maize or wheat; rice is seldom manured; the use of green manure is practically unknown and artificial fertilisers are too expensive. In the Kashmir Province wood fuel is plentiful in most areas and the manure available is practically all used in the rice fields. At the higher elevations the Gujjar uses it for maize crops. The owner-cultivator manures his rice fields liberally, about 120 maunds to an acre in some cases, but the fields of the absentee landlord get little manure and the crops of the latter are usually inferior to those of the former. In the Frontier Districts also all available manure is utilised in the fields. The Agriculture Department, supported by the various departments having contact with the cultivator, has tried its utmost to persuade him to use all available manure in the fields but to date its efforts have had no more effect in Jammu than in other parts of India where dung is used as fuel. The reason is clear; the cultivator must have fuel and in many areas wood fuel is non-existent or inadequate. The forests which existed a hundred years ago have been ruthlessly destroyed in many areas by man and goat; the remedy is to prevent the destruction of the sources of wood fuel supplies in every way and to open up new plantations under quick growing trees in selected areas for the specific purpose of supplying more wood fuel for domestic and other purposes. The working of the coal deposits in the Reasi District may well do much to solve the problem.

Fruit growing is an important agricultural industry in Kashmir; it is of little importance in Jammu at present. The value of fruit is appreciated in the Frontier Districts but cultivable land there is so scarce that fruit is mostly grown only where grain crops cannot thrive. In Kashmir there has been a good deal of development in the past 40 years but unfortunately two pests found their way to the country about 1920; these are known as the San Jose Scale and Woolly Aphis. The former in particular has done tremendous damage and still persists in spite of all efforts to eradicate it. The pests mentioned have caused heavy casualties amongst apple, pear, peach and cherry trees. They do not confine their attacks to fruit trees and this makes it all the more difficult to eradicate them. Large sums have been spent in an effort to bring them under control. To facilitate the work of the Agriculture Department in attacking and overcoming these pests the 'Crop and Plant Protection Act' was passed in 1933 by which the treatment of trees harbouring these two pests was made obligatory. Efforts during the decade have been continuous but the pests remain. In spite of

these pests fruit growing is providing the means of subsistence for an increasing number of persons in the Kashmir Province. There would appear to be no reason why the growing of quality mangoes and citrus fruits should not be organised and developed in the lower altitudes of the Jammu Province and the growing of apples, pears, peaches and cherries expanded in the Bhadrawah, Kishtwar and Ramban Tehsils at altitudes of 5,000/6,000 ft.

The size of the average agricultural holding has already been mentioned. The Director of Agriculture has expressed the opinion that the fragmentation of holdings is one of the most important factors obstructing the introduction of improved methods. He estimates that if all mutations be registered the average size of holdings will be found to have decreased by 10 to 15 per cent. Increased cropping of the cultivated area is handicapped in the Kashmir Province and the Frontier Districts by the rigours of the winter and in the Jammu Province by the lack of facilities for increased irrigation; everywhere, except in limited areas near densely populated localities, the lack of manure operates against intensive cultivation. The only immediate practical means of increasing the volume of food crops for an increasing population is by the use of manures, selected seeds and improved methods.

21. **Animal Husbandry.**—An ample supply of good draught oxen as well as milch cows is essential for a well-balanced system of agriculture. The difficulty in the Jammu and Kashmir State is not a shortage of cattle but an excess so large as to constitute a serious problem which is very much aggravated by the fact that most of the cattle are of very poor quality. Figures taken from the Cattle Census conducted in 1940, and quoted by the Superintendent Civil Veterinary Department, show that there are 130 cattle to every 100 acres of cultivated land; it is believed this is nearly twice the proportion obtaining in British India. It is not surprising that the quality is so poor, both for ploughing and for milking, when the numbers are so large. The problems involved are now receiving continuous attention. In 1926 expert veterinary opinion was obtained but owing to financial stringency little could be done at the time to implement the advice given although some action was taken. In 1933 the Veterinary Department was reorganised and strengthened in every way and active steps were commenced to remedy the results of neglect over a long period. The treatment of ordinary diseases and the prompt control of epidemics, unless they assume serious proportions, is

routine work. Epidemics naturally receive special attention. The main problems to be solved are the reduction in the total head of cattle, many of which are useless for any purpose, the production of a good type of plough ox at a reasonable price and in adequate numbers and the provision of a good strain of milch cattle. The problems are more difficult to solve than might be supposed because on the one hand the killing of cattle in the State is strictly forbidden whilst on the other hand export is prohibited. Excessive numbers due to uncontrolled breeding must lead to underfeeding and ill-nourished animals susceptible to any and every outbreak of disease. In 1940 there were 30 veterinary dispensaries in the State against 18 in 1930. At the end of the decade the construction of a well-equipped modern veterinary hospital was commenced at Srinagar and at the time of writing is nearing completion. A similar hospital for Jammu is under consideration. The use of goat tissue vaccine and virus has been introduced for giving immunity to cattle against Rinderpest. This vaccine is being produced at the State Veterinary Laboratory. Legislation has been passed to license approved bulls for breeding purposes. Steps to implement this measure are being taken. Funds to implement a scheme for the improvement of the cattle of the country have been annually provided on a more generous scale since 1937. Two small Cattle Breeding Farms have since been established. The aim is the progressive reduction of scrub animals by castration and the importation of selected bulls of approved breeds. For some time to come all efforts are to be concentrated on the production of a better quality general utility animal and the improvement of indigenous stock. When cattle owners begin to appreciate the importance and advantage of having fewer cattle of better quality it may be possible to be more selective and produce two different types, one for draught purposes and the other for milk. In 1930 there were no cattle breeding centres; in 1940 there were 87—all supplied with selected bulls. Legislation was passed during the decade providing for the compulsory castration of undesirable bulls under the orders of an officer of the Veterinary Department and it is proposed to carry out castration on a large scale in those areas first where approved bulls are stationed. In course of time this policy should reduce the number of useless cattle and increase the number of good quality animals. Various measures, including the holding of cattle fairs, have been introduced to popularise the scheme for cattle improvement and in the course of another decade the results of the efforts now being made should become apparent. There

can be no question that an improvement in the quality of draught oxen means better ploughing and better crops, and better milch cows more milk, a better diet and a healthier population. In spite of the enormous number of cattle in the country the supply of milk and milk products is inadequate. The rural population consumes a comparatively small percentage of the milk produced. Most of the daily supply is made into ghee and either handed over to a money-lender in liquidation of debt or sent to the nearest town for sale. At present the cry 'drink more milk' cannot be indulged; all possible steps must first be taken to increase the production of milk. A reduction in the numbers of useless cattle and the improvement of the breed is the obvious remedy. The average daily yield of a cow is about 1 $\frac{3}{4}$ lbs. A poor quality animal requires at least half as much feed a day as a good milk producer but an ordinary specimen of a good milking strain will produce at least four times the yield of the existing average cow thus producing twice the amount of milk for approximately the same feed. The total daily milk production in the country from cows, buffaloes and goats has been estimated by the Superintendent, Veterinary Department to be a little under 12 lacs lbs. and the average daily consumption per head of the population of milk and milk products about 4 oz. These figures speak for themselves and compare unfavourably with the daily consumption figures for the rest of India which, at 7 oz. per head, are not high. As in the case of milk products so in the case of eggs and poultry. It has been calculated that the consumption of eggs per head of the population does not exceed five per year. It seems that the villager, other than those living near towns, has not yet realised the full scope of poultry keeping as a cottage industry and the value of eggs as an article of diet but steps are being taken to educate him in this respect and to distribute eggs of improved types.

Sheep-breeding and wool-growing in this country is essentially a cottage industry. In the decade 1921-30, His Highness' Government obtained the services of an expert to advise on the woollen industry; his report, amongst other things, outlined a breeding scheme designed to improve the type of sheep. Some of the recommendations were implemented during the past decade and a Sheep-breeding farm was started for research work. Merino, Wensley Dale, Cheviot and Border Leicester rams have been imported and cross breeding with selected local ewes commenced. Experiments in stall-feeding in winter, machine-shearing, are

being carried out and sheep diseases studied. Since sheep-breeding and wool-growing are questions of All-India importance the Imperial Council of Agricultural Research has contributed to the cost of the scheme. Any improvement in the type of sheep maintained in the country and any increase in the wool crop is of vast importance to the great mass of the population. According to the livestock Census taken in 1940 the number of sheep in the State is just over 20 lacs and the number of goats nearly 15 lacs. These figures indicate the value of even a small increase in the annual wool crop per sheep.

22. **Co-operative Societies.**—The Co-operative Societies Department has been established in the State for many years but its operations have not met with complete success. This in no way reflects on the efforts of those at present in control of the work. In 1940 there were 15 Central Financing Institutions and some 3,788 Primary Societies; of the latter 2,839 were agricultural and 949 non-agricultural. The total membership rose from 63,364 in 1931 to 94,371 in 1940 and the working capital from just under Rs. 89 $\frac{1}{2}$ lacs to over Rs. 95 $\frac{1}{2}$ lacs. The latter figure is made up of Paid-up Share Capital Rs. 2,218,774, Loans and Deposits Rs. 4,653,375 and Reserves and other funds Rs. 2,701,014. The capital owned by the Societies has increased in the same period from Rs. 3,576,180 to Rs. 4,919,788. The objects of the many societies vary but the majority are credit societies; others aim at better-farming, consolidation of holdings, purchase and sale, organisation of labour, removal of adult illiteracy, arbitration, better-living and education. The aim of the 'better-living' societies is to improve village sanitation, reduce expenses on ceremonial occasions and check harmful customs. A good deal of propaganda requires to be done to educate the masses as to the real meaning and purpose of the Co-operative movement. Many members do not appear to realise that the true aims are thrift, removal of debt and the co-operation of all the members to obtain advantages in many directions unattainable by them as individuals. It is suspected that many join the movement in order to get something for nothing and unlimited credit without payment of interest let alone re-payment of capital. This misconception has to be removed before the movement can become strong, healthy and self-supporting. The liquidation of a number of insolvent societies has taken place during the decade; this is all to the good. It is a form of pruning necessary for the health and strength

of the main plant. The department is doing good work for the masses. One of its most important aims at present is the consolidation of holdings. During the decade 83 societies were organised for this purpose and scattered holdings totalling 198,104 kanals, equivalent to 24,763 acres, consisting of 51,856 fields of an average size of 4.57 kanals, were consolidated into 6,211 blocks of an average size of 31.92 kanals. The benefits of such work to the cultivator are too obvious to require description.

23. **Rural Development.**—A Panchayat Act was passed in 1935 providing machinery for the creation of Panchayats in rural areas with limited judicial powers; the first were established in 1936. In 1937 the Panchayat Department was overhauled and reorganised; it is now known as The Rural Development and Panchayat Department. In the first year of its existence a grant of Rs. 40,000 was sanctioned for rural development; the next year the grant was increased to Rs. 1 lac and in 1940 the grant was Rs. 1,40,000. As the name of the department indicates it is concerned with the working of the newly created panchayats or village committees and the amelioration of conditions in rural areas; the two are very closely related. It does not at present operate in the Frontier Districts. In their short existence the panchayats have done useful work; the number functioning at the end of the decade was 255. One of the causes of trouble and debt in rural areas is litigation over petty cases. To take such cases to the regular courts involves the waste of time and money of all concerned. The panchayats can probably settle most of these cases with a greater measure of equity than the ordinary courts; intricate legal points seldom arise and disposal is quicker and the costs are negligible. The number of cases brought before the Panchayat Courts up to the time of the recent Census exceeds 25,000; the number for 1939-40 was 8,830. This may be taken to indicate that the decisions given find general acceptance. The amount of money saved in costs on those cases is estimated to have been about Rs. 1,50,000. In addition to their court case work the panchayats are actively engaged in improving the amenities of life and in working for the general communal welfare in their respective villages. In the process all concerned in the movement must develop a sense of responsibility and unity. It is the function of the department to encourage self help, to supplement with government funds the contributions of the village for this or that communal purpose and generally to

advise and guide the village communities in connection with improvements to drinking water supplies, sanitation, communications, control measures during epidemics, consolidation of holdings, etc., and to assist them to enjoy healthy and harmless recreation. Since the department was re-organised in 1937 government financial aid to an extent exceeding Rs. 2½ lacs has been given for a variety of purposes such as the provision or improvement of culverts, drains, pavement of village lanes and approaches, water supplies, bathing places, latrines, ghats, bunds etc. In addition, some 200 miles of fair weather roads have been constructed or improved. The principle adopted, and rightly so, is that the village must make an effort itself and collect what it can towards the cost of village improvement works. The department has carried out investigations through a staff of surveyors into economic, social and cultural conditions in over 1,300 villages. Besides providing data for study on many subjects these surveys enable the department to gauge with some degree of accuracy the comparative merits of the many requests for financial aid. An adult-education drive to reduce illiteracy, organised by the Education Department, had much practical help from the Rural Development Department and the co-operation of the panchayats. A number of village libraries has been established and radio sets have been installed in 24 villages. There is indebtedness in most villages throughout the State. The economic surveys carried out are very comprehensive and include investigations into the annual income and expenditure of the individual families constituting a village. The figures produced show that in over 50 per cent. of the cases investigated expenditure exceeds income and in the remaining cases that the margin of income over expenditure is very small. To say that the figures compiled in this respect cannot be accepted as accurate without being subjected to a searching test does not reflect on the department's work. A good beginning has been made and the development of these activities should produce valuable results. But a time comes in all such work when the information collected must be sifted, tested and evaluated. Meanwhile, it would seem advisable that further investigations should be held in abeyance until the information already collected has been digested so that future efforts may be well-directed and the maximum benefit obtained from the work and expenditure incurred. For these reasons it is not to be expected that the progress made in the next few years will be as apparent as that in the early stages of the work but by 1950 the activities of the department should have produced definite and

obvious results over a wide area. Unless information already collected and classified is studied and digested there is a likelihood that a stage will be reached when 'the wood cannot be seen for the trees' and the department will be buried under a mass of undigested statistics.

24. **Marketing.**—In 1934 a Marketing Board came into existence to collaborate with the Agricultural Marketing Adviser to the Government of India, an officer appointed to implement the recommendations of the Royal Commission on Agriculture in connection with the organised marketing of agricultural produce. Its work in the early stages consisted entirely of commodity surveys; the commodities subjected to such surveys were selected by the Agricultural Marketing Adviser to the Government of India and have reference to the production, consumption, import and export of the commodities selected for survey, and their derivatives, throughout India. The detailed information collected is to form the basis of development work to follow. By 1940 a number of commodities had been surveyed and preliminary steps had been taken to formulate measures to improve methods of marketing. The absence of central regulated markets is a serious disability to the best marketing of any commodity. Several schemes for the opening of such markets were under consideration at the end of the decade. The grading of produce according to accepted standards is aimed at; the necessity for this is obvious in any well-organised trade and is for the benefit of both the buyer and the seller in the long run. Little real progress has been made to date and the world war now raging has interrupted the work and put back the clock in this respect for some time to come. With everyone scrambling for commodities, irrespective of quality and price, a policy of careful grading has little chance of success. Grading comes into its own in normal times when trade is following recognised channels and quality and reliability count most. Weights and measures throughout India are confused and conditions in the State are no exception. The exact amount represented by any particular weight or measure seems to vary very considerably in places comparatively close to each other. The question of standardising weights and measures is receiving consideration. The various improvements in marketing facilities which have been mooted cannot be said to have received much local encouragement; there has been a certain amount of uninformed and misguided opposition to grading and it is unlikely that much real progress will be made in the absence of, at least, some local trade support.

25. **Roads and Communications.**—In these days of motor transport one of the most important problems in any country is the provision of good roads and communications. The expansion of the road system and the means of communication is obviously a much harder problem to tackle in a mountainous country like the Jammu and Kashmir State than it is in the plains; a hundred miles of good road may be built in the plains at a cost insufficient to cover a tenth of the distance in mountainous country. The fact must be stated that many districts in the State suffer serious disabilities owing to the absence of roads—not good roads but roads of any kind better than a rough pony track. It would not be fair to blame the administration for the existing defects in the road system. There is no railway in the State except a small branch line from Sialkot which crosses the State boundary at Suchetgarh and runs as far as Jammu City. The extension of the railway further into His Highness' territories would be a major engineering project. It is not a question His Highness' Government can alone decide; it requires the collaboration of government and railway authorities in British India. No scheme worth the name can be carried out in connection with the exploitation of the mineral deposits known to exist in the Jammu Province without an extension of the railway to the heart of the area. The State possesses two excellent motor roads, running through mountainous country, connecting Srinagar with the rest of India *via* Rawalpindi and Abbottabad to the east and Jammu and Sialkot to the south. These two roads known respectively as the Jhelum Valley Road and the Banihal Road join at Srinagar to make one continuous road which is the main artery of communications throughout the Jammu and Kashmir Provinces. The whole import and export trade of the State with India and beyond, as well as such trade as there may be between India and beyond with the Frontier Districts and Central Asia, passes through Jammu or Srinagar over one or the other of these two roads. Since this question of roads and communications is of such great importance to the whole economy of the country it will be worthwhile to see what has happened in the past decade and to discuss the possible developments in the near future. It may be said at once that the main artery Sialkot-Jammu-Srinagar-Rawalpindi-Abbottabad has not only been maintained but vastly improved. Many dangerous corners have been reduced and many miles of road surfaced with tar or bitumen preparations. Other roads existing in 1930 have been maintained in a fair state of repair. But it is with new roads we are chiefly concerned, roads to open up the large

areas previously denied the facilities and advantages of motor transport. Taking the Jammu Province first we find that a fair-weather road has been constructed from Mirpur through Kotli to Rambari giving direct communication by motor in fair weather between the Mirpur District and the Poonch Jagir. The length of this road is 79 miles. It was previously unfit for motor traffic at all. Three new roads in the Mirpur and Jammu Districts are designed to connect Dharamsal Jhangar with Nowshera, Nowshera with Sadhoti and the latter place with Akhnur. This scheme had been completed at the end of the decade with the exception of a bridge over the Nowshera Tawi river at Beri Pattan to link up the Akhnur-Sadhoti and Sadhoti-Nowshera roads. With the completion of this bridge, through wheeled traffic will become possible between Jammu City and Poonch *via* Dharamsal-Jhangar. Another road has been constructed between Udhampur and Ramnagar but this still lacked a bridge over the Jammu Tawi at the end of the decade and traffic had to be ferried across; the construction of a bridge is under consideration. A fair weather motor road from Batote on the main Banihal Road to Bhadrawah was commenced in 1935. It will be 55 miles long and was estimated to cost over Rs. 7 lacs. Unexpected difficulties and set-backs were experienced and the road was not completed in 1940. When ready this road will open up a large area and should give a distinct impetus to trade between the Bhadrawah and Kishtwar Tehsils and the Udhampur and Jammu Districts. The road connecting the Reasi and Jammu Districts has been metalled from the take-off on the Banihal Road as far as Katra and greatly improved but beyond Katra it is a very poor fair-weather road and is scarcely motorable at any time except after a good spell of fine weather. The Jammu-Kathua road has been metalled as far as Samba; beyond that town it is only fit for use in fair weather. It is cut at right angles by the Ujh river and other smaller streams and is impassable in the rains. His Highness the Maharaja Bahadur has recently ordered the Ujh to be bridged. This is a most important road connecting the Kathua and Jammu Districts. In the past a traveller from Jammu to Kathua had to go by train to Pathankote and then back to Kathua by tonga or foot. The same difficulty exists at present in the rains. An all-weather motor road from Jammu to Kathua will be a tremendous gain to the whole area served by the road. A number of bridle paths have been widened and improved and the road construction programme in the Jammu Province may be said to have shown steady progress during the decade though an alarming amount of work has to be

done before all districts will get an all-weather motor service to the chief centres. In the Kashmir Province also a number of roads have been improved; some fair weather roads have been metalled and become all-weather motor roads whilst others have advanced from being unmotorable to the fair-weather class. The more important may be mentioned. The road from Srinagar to Charar-i-Sharif has been converted into an all-weather road up to Nagam and a fair weather road up to the Muslim shrine at Charar-i-Sharif. The Anantnag-Pahalgam road leading to Sri Amar Nath Ji has been widened and the surface improved. It is now a good road in all weathers unless damaged by heavy rain. The Pampur-Shopian road has been metalled as far as Pulwama and this section is now a good all-weather motor road; the metalling is to be continued. The Shalamar-Naseem-Gandarbal road and the Gandarbal-Safapur road have been widened and converted into good fair weather motor roads. Other roads throughout the province have been improved and it may be said that the importance of good roads and communications has at last been recognised. Several projects are under execution or receiving consideration and if the present policy is continued great improvements will have been effected before the next Census arrives. The roads to the Frontier Districts must remain pack-transport roads for the most part but the Treaty Road to Leh has received attention and is now motorable as far as Gagangir in fair weather. In a year or so it is hoped to make the road motorable as far as Sonamarg. This should convert Sonamarg into a centre not only for tourists but for the Central Asian trade, if the latter is ever revived. Another important work which has been commenced is the construction of a motor road over the Haji Pir Pass linking up the Poonch Jagir with the Kashmir Province.

26. **Irrigation.**—Next to roads, irrigation is a matter of prime importance if the means of feeding a rapidly increasing population are to be maintained. In the absence of a railway with fixed rates for freight an assured food supply for the Kashmir Province is a vital matter. Motor transport cannot be relied upon because in times of short supply it usually happens that freight rates for motor lorries begin to soar and the expense of importing supplies to give relief becomes almost prohibitive. Ample water for irrigation is available almost everywhere in the Kashmir Province but in many areas use cannot be made of it owing to the difference in levels. During the decade 1931-40 the Zainagir Canal was completed, the Lal Khul and Martand Canals were extended and

two new canals, known as the Nandi and Dadi Canals respectively, were constructed. In 1940 the Martand Canal irrigated 7,578 acres against 6,454 in 1930; it also supplies good drinking water to the area it irrigates. The area irrigated by the Lal Khul increased from 3,879 acres in 1930 to 4,621 in 1940. The Zainagir Canal was commenced in 1923 and completed in 1931. It cost just over Rs. 10 lacs and irrigated 7,538 acres in 1940. The Nandi Canal irrigates land between the Jhelum and its tributary the Vishav. Actually it is an extension and reconstruction of a canal built by the local cultivators the take-off of which was defective and the distribution inadequate and irregular. It was commenced in 1936 and completed at a cost of Rs. 77,640. It irrigated 4,388 acres in 1940 against 700 previously. The Dadi Canal replaces a small water channel constructed by cultivators; it takes off from the Liddar River. The revised estimates for reconstruction and extension amount to Rs. 425,000. Work was commenced in 1937 and nearly completed at the end of the decade. In 1940 it irrigated 1,620 acres. Canal construction has received reasonable attention in the past decade but there are still many areas in which crops could be increased considerably with better facilities for irrigation. It is necessary that the ample water available be used to the greatest extent possible and the existing canal systems improved and extended in all directions. This is the only certain means of increasing food production; the nature of the country is such that the bugbear of most canalised areas—waterlogging—need not be given any thought. The low lying marshy areas have always been more or less waterlogged; most of the rest of the land is on a slope and surplus water drains off quickly.

The need for good canals is greater in the Jammu Province than in Kashmir. The Ranbir Canal was started in 1903 on an estimate of Rs. 17 lacs and was opened in 1905. In 1940 its length, including distributaries, was 236 miles and it irrigated 122,032 acres against 70,738 in 1930. During the decade just over Rs. 1 lac was spent on improvements. It takes off from the left bank of the Chenab near Akhnur.

The Pratap Canal takes off from the right bank of the Chenab about six miles below Akhnur. It is an old canal first constructed in 1873; it was breached and fell into disuse until 1901 when it was remodelled and extended. In 1940 it irrigated 2,798 acres against 1,986 in 1930. The canal also supplies drinking water to the inhabitants of the Kandi tract through which

it passes. The Basantpur Canal takes off from the right bank of the Ravi about three miles above the Madhopur Head works. It was opened in 1918 and was expected to irrigate 7,427 acres. These hopes have not been realised; it irrigated 2,206 acres in 1930 and 2,245 in 1940.

The Ujh Canal was originally designed to mitigate the hardships of the people living in a tract of about 2,000 acres in the Jasmergarh Tehsil which was entirely dependent on rainfall both for irrigation and domestic use. It was first constructed in 1923; extensions were started in 1924 and completed in 1933. In 1940 it irrigated 3,268 acres against 2,167 in 1930. It supplies drinking water to the area as well as irrigating it. The Upper Jhelum Canal which irrigates large areas in the Punjab is of little use to land in the State but distributaries from it irrigate the small State areas through which it passes. The area irrigated in 1940 was 1,149 acres against 856 in 1930. The difficulties in the way of irrigation engineers in the Jammu Province are great on account of the broken character of the country. But in view of the fact that the supply of adequate drinking water is an acute problem in many areas, additional efforts should be made to extend the existing canal systems and to open new canals, even if only small ones, wherever it is possible to do so. Several projects for new canals are known to have been under consideration at the end of the decade for both provinces; the sooner construction is started the better. More food grains are wanted in Kashmir and more drinking water in Jammu.

The Frontier Districts are so mountainous that irrigation is very difficult except in the case of small khuls or water channels taken along the contour of the hillside. But in most areas rainfall is very small and cultivation depends 100 per cent. on irrigation. The construction of canals at Kharthong and Saliskote in the Kargil Tehsil is under consideration. They are estimated to irrigate 2,900 and 1,600 acres respectively and would add considerably to the present very limited means of subsistence. A new canal to irrigate land in the vicinity of Leh is believed to be a practical scheme. It is reported that the Doyan Kuhl (canal) in the Astore District was being improved at the end of the decade. Since 1931 the total mileage of canals including distributaries has increased from 393 to 488 and the area irrigated from 89,372 acres to 156,495. The increase in the area irrigated is greater in proportion than the increase in the mileage of the canals; this must

be attributed to improved distribution. The canals discussed are those only which have been constructed by the Government. There are hundreds of small canals and distributaries which have been constructed by the villagers themselves wherever local conditions make it possible for them to use the water of the many rivers and small streams: these they repair each year and, if possible, extend.

27. **Public Health.**—It is only necessary to refer to vital statistics and public health conditions briefly. Colonel Sir Ram Nath Chopra, I. M. S., (retired) has kindly written a note and supplied figures to show the general conditions obtaining during the past decade which appears as an appendix at the end of this essay. He has expressed the opinion that the vital statistics are not as unreliable as might be thought. It is unfortunately a fact that the procedure for the notification and recording of births and deaths is defective. The position in the Jammu and Kashmir State is not exceptional; the difficulties and defects obtain throughout India except in well-organised cities and municipalities. The present procedure requires overhauling if the figures recorded are to be deemed reliable for statistical purposes. With the expansion and development of village Panchayats and revision of existing methods it might be possible to obtain a more accurate record; at least in those areas where a panchayat is functioning. As it is we must not place too much reliance on the figures given.

28. **Industries.**—Agriculture is by far the most important industry in the State. Usually the word 'Industries' implies non-agricultural occupations and it is used in that sense here. If good roads, communications and water supplies are prerequisites for successful agriculture, they are essential for the success of industrial enterprises. Imperial Table VIII was designed to show the distribution of the population by occupations and Table IX the distribution of the population in the various categories of industrial workers from managers down to operatives. But, as the notes to these two tables indicate, the defects of enumeration, sorting and compilation together produced such poor results that these tables are worthless for statistical purposes. Excluding Agriculture, our most important industries are forest exploitation, sericulture, weaving of textiles of all kinds, wood-working trades, flour-milling, oil-milling, bee-keeping, working in non-precious metals, rope-making, basket-ware, dairy-farming, tanning, the manufacture of hosiery, papier-mache, perfumes, silverware, carpets, gubbas, soap,

rush-mats and chicks, matches, pharmaceutical preparations, ceramics, embroidery, printing, tailoring, building and the exploitation of mineral deposits. Of the minor products taken from the forests and hillsides perhaps kuth, artemisia and resin are the most important at present. The first named is an insecticide; it is also used largely in the preparation of incense, particularly in China; for some years past the market price for this product has been depressed owing to the Sino-Japanese 'Incident'. Artemisia is a species of wormwood from which santonin is extracted whilst resin is tapped from the chir pine and converted into turpentine and certain by-products. To the industries mentioned must be added the manufacture of Indianite, a building material made by a special process from wood. Most of our industries are located in and around the two cities of Jammu and Srinagar and the two towns Anantnag and Baramulla.

The large numbers of visitors to the State each year, a few under 30,000 in 1941, most of whom come to the Kashmir Province, constitute what may be termed the Tourist Trade which provides the means of subsistence for many thousands of the population. These tourists support many of the smaller industries, particularly those which may be called luxury trades, such as wood-carving and cabinet-making, papier-mache, silverware, embroidery, carpets, gubbas, catering, repairs to motors and the provision of accommodation in houseboats, hotels and camps. A Drug Research Laboratory has been opened recently in Jammu and in the course of time the manufacture of drugs from herbs and plants now growing wild in the forests or to be cultivated should become an important local industry.

Some of the cottage industries are being subjected to special investigations by staff working under the control of the Industries Department; these include handloom-weaving, furniture-making, wood-turning, bee-keeping, rope-making, basket-making, poultry-farming, dairy-farming, tanning, flour-milling, oil-milling, and calico-printing. Reports on gubba-making, carpet-making, silverware and wood carving have already been published. There are few large industrial establishments; there are no large mills such as the jute mills of Bengal and the cotton mills of Bombay.

29. **Industrial Organisation.**—Of all the industries referred to only forest exploitation, sericulture, the manufacture of matches, the extraction of santonin, the manufacture of

Indianite and one or two of the carpet factories are independently financed. There may be, and probably are, others but they are few and do not come readily to mind. Of those mentioned forest industries, and sericulture are owned, controlled and financed by the State; the match and santolin industries are privately financed and controlled. The carpet factories, the larger of which are privately owned and financed, obtain subsidies from the State during years of trade depression. The great bulk of the small industries, not all, but especially the luxury trades, are worked on a system somewhat similar to that prevailing in England before the Industrial Revolution, say 150 years ago. The artisans work together in groups under a master craftsman who usually gets his supply of raw materials from a dealer; the latter finances the work, determines the quality of workmanship required, and decides the design of the goods to be made in consultation with the master craftsman. The dealer-financier controls the sale of the finished article and usually has his own selling agency. He is to these small industries what the money-lender is in the rural economy of India. He makes provision for a good return on his capital for any advances he may make to the workers. Some of the small privately owned industrial concerns are financed by the local banks but these must be a small percentage of the total number. In the absence of better organisation and credit facilities the part played by the dealer-financier is essential to most of the small scale industries. Co-operative sale and purchase are not yet developed and it is impossible to dispense with him. It is feared there is a good deal of sweated labour employed in most of the smaller industries.

30. **Forests.**—Next to Agriculture the exploitation of the extensive and valuable forests of the State constitutes the largest industry. The extraction of timber, collection of minor forest products and other activities play a very important part in the life of the rural population; they not only give employment directly or indirectly to many thousands of the inhabitants but are a source of supply, free or at concession rates, of timber for building or repairing houses, fuel, fodder and minor edible forest products. All the forests have been brought under regular working plans and during the decade 1931-40 most of these plans were revised and brought up-to-date. On an average 212 lacs cubic feet of timber and 225 lacs cubic feet of fuel are removed from the forests annually; the actual amount in any year naturally varies according to trade demand and market

conditions. In recent years exploitation of the forests has been developed for the greater benefit of the local inhabitants. Formerly, most of the forests were worked under long leases by a few big firms with head offices outside the State. They were powerful enough to enforce their own wage rates for labour and reaped most of the profits. This system has been gradually replaced by short term lump sum leases for comparatively small compartments or groups of compartments. These smaller leases have encouraged local enterprise; many local firms have come into existence and are working successfully. As a result of the existence of a number of small firms labour rates are on a more competitive basis.

The Resin-Tapping industry in the Udhampur District has been reorganised and developed. During the past decade the amount of resin extracted annually averaged 38,000 maunds. Tapping was commenced in the Kathua and Mirpur Districts in 1938; the average annual crop from these two forest divisions is 22,000 maunds. This industry is essentially a subsidiary occupation for the local rural population and the increased means of subsistence in the form of wages is of considerable importance to them.

In the past fir has been worked to a limited degree only. With the advances made in the industrialisation of India this timber has come more and more into prominence. Consequently, in anticipation of the increased demand a new Fir Working Plan Division was started to bring these forests under regular working plans.

Previously, half-wroughts for service rifle butts were manufactured entirely from walnut. In recent years various broad-leaved species such as birdcherry and maple have been used. The factory is located at Baramulla in the Kashmir Province. The following industries in active operation during the past decade depend on the forests of the State for their raw materials:—

- (i) The Rosin and Turpentine factory at Miran Sahib on the Jammu-Sialkot branch line of the North Western Railway.
- (ii) The Indianite factory at Miran Sahib.
- (iii) The Kashmir Willows Factory at Miran Sahib for the manufacture of sports goods with a branch at Srinagar.

(iv) The Half-wrought factory at Baramulla.

(v) The Santonin factory at Baramulla.

(vi) The Match factory at Baramulla.

The possibilities of further development of forest resources are believed to be good. Timber such as fir and broad-leaved species previously in little use are coming into prominence. The prices of some minor forest products were rising at the end of the decade and owing to the war the demand may be expected to expand. Increased demand must result in greater activity and the employment of more labour. Projects under contemplation which should provide employment for considerable numbers, both educated and uneducated, are:—

- (i) A factory for the manufacture of drugs based on the results of the work of the Drug Research Laboratory opened at Jammu in 1941.
- (ii) The cultivation of Pyrethrum has passed the experimental stage in the Kashmir Province and is now being grown on a field scale. A considerable industry should develop for the exploitation of this plant and provide new employment on a large scale.
- (iii) Negotiations have been commenced with big Indian industrialists with a view to starting the manufacture of newsprint. Such a factory will involve a larger capital than can be provided from State resources if the development of beneficent activities is to continue.

The trout streams continue to attract a large number of visitors to the State and their development and maintenance is receiving continuous attention. It is estimated that over 20,000 persons depend directly or indirectly on incomes derived from this source and from other fisheries. The tourist traffic has increased considerably during the past decade. Many camping centres are in or on the borders of demarcated forest areas. The construction of roads, camping grounds and tourists' huts is continuous.

It is estimated that at the end of the decade some 50,000 persons were directly employed in connection with forest exploitation; to these must be added the numbers indirectly

affected. The Kashmir Muslim element of the population provides the bulk of the labour working in the forests; they are hard working and have benefited considerably from the expansion and development which have taken place. The Gujjars for the most part continue to follow their hereditary occupation of cattle breeding. The Hindu elements of the population do not readily take to manual labour. It is, of course, their loss; efforts are being made by the Forest Department to induce this important section of the population to look upon manual labour in the forests with less aversion. The chief areas affected by a disinclination of the local people to work in the forests for various reasons are the Muzaffarabad and Pir Panjal Divisions in the Kashmir Circle and the Batote, Lander, Udhampur and Ramnagar Ranges in the Jammu Circle. It should perhaps be stressed that, apart from the large permanent establishment employed by the Forest Department in many administrative and executive capacities, for the great majority working in the forests is a subsidiary means of livelihood. Some few skilled workers, such as fellers and sawyers, move from one district to another according to the seasons but the majority of the labour is recruited from the villages in the vicinity of the work in progress; these men return to their principal means of livelihood—agriculture—at the more important seasons of ploughing, sowing and harvesting.

31. Sericulture.—The next important industry is sericulture; the chief stages are rearing the silk-worm, collecting and delivering the cocoons, reeling off the silk from the cocoons and weaving the silk yarn; we must not forget the provision of food for the silk-worm—the leaf of the mulberry tree. As already stated the silk industry is controlled and financed by the State. It provides permanent employment for hundreds and subsidiary occupation for many thousands of agriculturists throughout the State. There are two factories for receiving the cocoons and putting them through the various processes, one at Srinagar and the other at Jammu. The former is easily the larger; in addition to a permanent establishment of nearly 400 persons the average number of daily workers employed in the year 1940 was 2,231. The average for 1931 was 1,707 and it remained just above that figure until 1938 when it jumped to 1,995; the figure for 1939 was 2,040. These daily silk-factory workers may be considered permanently employed; the majority live in Srinagar. The number of rearers of silk-worms employed by the Srinagar factory in 1940 was 51,000; these are all agriculturists and they are spread through

all tehsils of the Kashmir Province; the average earnings per rearer's household in 1940 was Rs. 8. This is a purely subsidiary means of livelihood and from the figures it will be seen that these rearers between them receive over Rs. 4 lacs in wages annually. To ensure an adequate food supply for the silk-worms the mulberry is a protected tree; its destruction is prohibited except under proper authority. The maintenance of mulberry tree nurseries and continual transplanting and development of new areas is essential for expansion and to replace old and damaged trees. In the year 1921 the number of plants raised and transplanted was just over 20,000, in 1930 just over 41,000, in 1935 70,000 and in 1940 well over 84,000. It will thus be seen that food supplies have been continuously and considerably expanded to meet an ever increasing demand.

The Jammu factory employed on an average 244 daily workers in the year 1940. The number of rearers employed was just over 7,000 at the beginning of the decade 1931-40 and just over 10,000 in the year 1940; these figures indicate steady progress. The annual amount earned per rearer's household worked out at about Rs. 12 representing a total cash distribution in wages for the year of Rs. 120,000, making a total of Rs. 520,000 for both provinces.

A government silk weaving factory has been established at Srinagar recently with up-to-date machinery capable of handling 30,000 lbs. of raw silk annually. At present this factory gives employment to about 100 persons daily. Action has been taken to provide for the continued expansion and development of the silk industry at all stages of production and in the decade 1941-50 the means of subsistence provided by it should be increased.

32. Tourism.—Kashmir has been famous for its salubrious climate, beautiful valleys and magnificent scenery not for generations but for centuries. A hundred years ago a few undertook an arduous journey to visit the country; the numbers gradually increased until in the decade 1890-1900, with the completion of the Jhelum Valley Road, they became considerable. The visitor then usually came by tonga; some rode and a few walked. It was not until the motor car reached Northern India that the influx assumed important proportions. Where visitors to the country were previously to be numbered in tens they began to come in hundreds; they are now to be counted in thousands. The tremendous development that has occurred is due entirely to the provision of good motor roads

and the reduced costs of travelling. The number of visitors in 1941 as already remarked, was nearly 30,000. The amount of wealth these thousands bring to the country cannot be assessed with any accuracy without the collection of a mass of detailed information but it has been calculated roughly as in the region of Rs. 80 lacs. The money put into circulation by the visitor is now of enormous importance to the economy of the whole country. Many small industries are supported by the visitor and thousands of local inhabitants are entirely dependent for a livelihood and the means of subsistence on a good visitors' season. During the decade 1931-40 the annual number of visitors recorded at the customs barriers into the State has risen from 8,404 in 1931 to 29,292 in 1940. During the same period customs receipts have risen from Rs. 69 lacs to Rs. 78 lacs. It is not suggested that there is any exact relation between the number of visitors in any year and Customs receipts but the former indubitably has a bearing on the latter, both direct and indirect. As long as good roads and cheap transport are available the traffic may be expected to develop further provided the present policy of improving and expanding internal communications continues. It is essential to make more beauty spots and camping sites accessible at a reasonable cost as those more easily reached become overcrowded. His Highness' Government are alive to the value of the Tourist industry and thanks to the facilities provided it is possible for the visitor to enjoy a healthy holiday in beautiful surroundings at a cost proportionate to his mode of life. Every extra visitor means an increase in the means of subsistence. Any heavy falling off in numbers, whatever the reasons, must re-act adversely on the population of the State as a whole and of the Kashmir Province in particular. The complete failure of the tourist traffic for any reason in any year would mean ruin to many small industries, shopkeepers and house boat owners and semi-starvation to many thousands who are dependent on the visitor.

33. Customs and Trade.—The progress made in the development of industries, commerce and trade of any country is reflected in the fluctuations of the figures contained in the Customs reports. Fluctuations from month to month or even from year to year may be deceptive but if we examine the figures from one decade to another we can ignore minor and short term fluctuations. By its treaties the Jammu and Kashmir State is entitled to levy import and export duties and to receive goods from foreign countries through British Indian customs posts in Kashmir bond. There is an exception. Goods passing

along the Treaty Road between India and Central Asia *via* Srinagar and Leh in both directions are exempt from State customs duty if the seals are not broken in transit or the goods taken beyond the defined limits of the Treaty Road into the State customs area. During the last two decades the trade of the State has increased considerably in volume but to a less degree in value. For the year 1977 corresponding to 1920-21, the volume of trade, import and export, amounted to 42½ lacs maunds with a value of Rs. 520 lacs. The figures for volume in 1996-97, corresponding to 1939-40, were 57¼ lacs maunds and for value Rs. 575½ lacs. The figures for value do not always vary in direct proportion to the figures for volume. Prices for the same commodity vary considerably from month to month and year to year; in some years the figures for heavy but cheap goods such as grain increase. The decade 1931-40 started with the whole world in the throes of a trade depression unprecedented in its character and intensity. The value of trade in the State as reflected in the Customs returns in round figures fell from Rs. 520 lacs in 1920-21 to Rs. 455 lacs in 1930-31 and still further to Rs. 367 lacs in 1931-32. From the latter year onwards the recovery was slow and it was not until the year 1936-37 that a definite improvement was noticeable. For the next two years there was a small increase but with the outbreak of war the price of food grains in Kashmir rose swiftly and the export of grain was stopped. This had more effect on volume than on value but in other ways too trade has been upset and diverted from normal channels; imports and exports of some commodities have almost ceased whilst in the case of others there has been a large increase. It is too early to discuss in detail the effects of the war on the State. In some respects the country has benefited; in others it has suffered. The volume of import trade in 1920-21, 1930-31 and 1939-40 in round figures was 16½ lacs, 24½ lacs and 26½ lacs maunds respectively and in round figures the value for the same years was Rs. 273 lacs, Rs. 257 lacs and Rs. 288 lacs respectively. The volume and value of the export trade for the same years in round figures was:—

Volume—26 lacs, 37 lacs and 31 lacs maunds.

Value—Rs. 178 lacs, Rs. 133 lacs and Rs. 207 lacs.

These figures show how widely the relation between volume and value varies. This is not the occasion for a detailed examination of import

and export trade figures but some reference seemed necessary because, taken as a whole, they have some bearing on the question whether the increase in the means of subsistence is as great as the increase in the population and likely to continue to be so. Those in the State whose duty it is to study the trend of trade are of the opinion that during the past decade trade in general showed improvement up to the eve of the war. It would serve no useful purpose to attempt to prophesy the trend of trade for the rest of the present decade. Timber and silk are in heavy demand for war purposes and export of these two commodities should continue at a high figure for the duration of the war and for some time afterwards at good prices. In view of the geographical position of Kashmir there should be little, if any, falling off in the tourist traffic. It may be that purchasing power, especially for luxury goods, will be less owing to higher taxation but it is reasonable to assume that the State's main industries will continue to support those dependent on them. What the post-war position will be it would be folly to predict.

34. **Central Asian Trade.**—At the end of the decade 1911-20 the trade between India and Central Asia was flourishing. For the year 1919-20 the trade to Central Asia was valued at over Rs. 48 lacs and from Central Asia at nearly Rs. 42 lacs, giving a total value of Rs. 8,985,510. Next year, 1920-21, the figures rose to over Rs. 47 lacs for exports and nearly Rs. 46 lacs for imports giving a total of over Rs. 93 lacs. This was the peak year of the trade. From that time onwards, that is to say for the last twenty years, the trade has been dwindling steadily in both directions. In some years there was a recovery in trade but such bursts were always short-lived. For the year 1939-40 the figures for exports to Central Asia were Rs. 151,024 and for imports Rs. 230,198, giving a total of Rs. 381,222. Trade between Central Asia and the State has suffered a similar decline. Imports to Kashmir from Central Asia in 1920-21 were valued at Rs. 425,410. The trade declined until 1927-28 when there was a recovery to Rs. 414,910; the figures for 1928-29 were Rs. 442,156—the highest since 1913-14. Political refugees were probably responsible for this short lived revival. From 1928-29 onwards the value of the trade steadily declined; in 1939-40 it was worth only Rs. 78,246—mostly namdas. Since then it has dwindled to practically nothing. Whether the trade will be revived or not remains to be seen. Its decay may be attributed to the lack of stable government and to the hostile attitude to the trade on the part of certain elements in the Sin-Kiang Province and other areas of Central Asia from and to which the trade used

to flow through Yarkand and Leh. The present world war has brought Russia, China and the British Empire into close friendship as a result of mutual interests. It is not, perhaps, too much to hope that at the end of the war the governments of these three empires will be able to take such measures as will not only revive but stimulate the trade on this route. The chief articles imported from Central Asia were cotton manufactures; horses, hides, skins, furs, silks, woollens, namdas (pieces of felt), carpets, gold and charas—an intoxicating preparation made from a species of hemp. The chief articles of export from India were cotton manufactures, hides and skins, silks, tea, leather, paints and colours, drugs, medicines and spices. The imports to Kashmir consisted almost entirely of namdas. The cessation of this trade must have had a very serious effect on the ability of all those living on or near the trade route to earn a livelihood especially the people of the Ladakh and Kargil Tehsils. The market at Leh, through which all the trade used to pass, is now but a pitiful reminder of happier and more prosperous times.

35. **Unemployment.**—The extent of unemployment as recorded at the Census is shown in Imperial Table X but as the notes to the table indicate, the figures given are believed not to tell the whole story. Many educated persons, particularly members of joint families, are believed not to have declared themselves to be unemployed although not occupying a paid post. Most of the uneducated masses don't know what is meant by the term; they have never enjoyed continuous employment from one year to another and to be out of employment temporarily does not in their estimation constitute what is usually understood by unemployment. The figures produced by the Census record are 5,640 for all classes and 3,837 for those educated. It would probably be more in accordance with the facts of the case if we put educated unemployment at 5,000 and the figures for all classes at 10,000. Many youths continue to study at schools and colleges not with any definite aim or to acquire a higher standard of education and learning but because they cannot get a post in government service. It is better that they should do so than sit at home or walk about the streets with nothing to do. On the other hand, this factor results in the over-crowding of college classes at a time in a student's life when small classes and more individual attention are essential to those prosecuting their studies beyond the matriculation standard. Many men of the artizan classes and those working as domestic servants in one capacity or another are not employed for the whole year and it is thought that such persons

do not consider themselves as unemployed. Thousands of casual labourers are not fully employed; few of them have regular work throughout the year. The whole problem of Unemployment received the close and continuous attention of His Highness' Government throughout the past decade. In 1936 a Commission was appointed to inquire into the causes of unemployment amongst the educated classes in particular and amongst all classes in general and to make suggestions for a solution of the problem. The Commission's Report was published in 1937. The history of the problem, here and elsewhere in India, was studied, a mass of information collected, evidence taken and the possibilities of effecting improvements thoroughly surveyed. The Commission pointed out that there were no statistics of any kind available to show how much unemployment there was amongst the masses but expressed the opinion that, if the term 'Unemployment' was applicable to a condition of 'Under-employment', there was unemployment to a considerable degree. Some of those answering the Commission's questionnaire were of opinion that there was practically no unemployment amongst the so-called 'Depressed Classes' designated in the Census Report 'Scheduled Castes'. The Commission hesitated to accept this sweeping statement and pointed out that the classes referred to would not always remain uneducated nor continue to follow their hereditary occupations only and that the extent of unemployment in those occupations in which they succeeded in getting a place would be aggravated according to the extent of their success. The Commission recognised the existence of a good deal of 'Under-employment' amongst artisans and craft workers, more especially amongst those normally employed in what are usually known as luxury trades, and stated that this condition was more apparent in Kashmir than in the Jammu Province. Unskilled labour and agriculturists were held to be under-employed rather than unemployed. The causes of unemployment were deemed to be trade depression during the first half of the decade 1931-40, faults in the educational system, mechanisation and mass production of goods in other countries reacting on small scale industries in the State, aversion of some classes to manual labour, steady increase in population, lack of industrial development, inadequacy of financial facilities, failure of social customs to adjust themselves to rapidly changing conditions and pressure on the land resulting from fragmentation of holdings.

Having discussed in detail the different spheres of work and activity throughout the State the Commission formulated its suggestions.

and since these have a direct bearing on the problem today they may be recounted briefly. Under the head 'Services' they advocated, amongst others, the steady expansion of free primary education, strengthening the staff of the Industries, Agriculture, Veterinary and Co-operative Societies Departments and the provision of extra staff in the Forest Department to facilitate the splitting up of large forest contracts into smaller ones. Under the head 'Professions' the Commission recommended the registration of medical practitioners, the subsidising of qualified medical men, vaides and unani hakims working in rural areas, and enforcing the employment of qualified engineers, overseers and sub-overseers as employees or partners in certain classes of contracts under the Public Works Department. Under Agriculture the extension of cultivation in demarcated forest areas was advised where this was possible without harmful results, the setting up of Co-operative Sale Societies, the development of Co-operative Marketing, the extended planting of mulberry trees and the expansion of sericulture, the improvement of cattle breeding, the expansion and better organisation of the fruit-growing industry, the accelerated development of good roads and irrigation schemes, the improvement of communications between villages and the consolidation of holdings. Constructive suggestions were also made with regard to the provision of increased facilities for tourists and the development of industries. In recording its view with regard to the requirements of Education, the Commission recognised the technical nature of the question and advocated the appointment of a committee of educationists to consider its proposals and to report what modifications and changes were necessary. In conclusion the opinion was expressed that there was no facile remedy for educated unemployment and no panacea for all the ills from which the existing educational system suffered nor for the difficulties under which industrial development was struggling. Remedial measures, it was added, involved hard work, courage and expenditure.

There seems to be no reason to find fault with the causes of unemployment listed in the report of the Unemployment Commission. Except the trade depression, which caused such distress in the first half of the decade, all of them are operating today with more or less force but anyone with local knowledge must know that since the report was submitted His Highness' Government have made great efforts to implement the Commission's more important recommendations. Primary education has been expanded. An Educational Re-organisation Committee was

appointed in June 1938 and submitted its report and recommendations in March 1939. The staffs of the Industries, Agriculture, Veterinary, Co-operative and Forest Departments have all been strengthened and action taken in many directions to which the Commission called attention. Qualified medical practitioners have been registered and medical men, vaides and unani hakims practising in rural areas subsidised; the whole Medical Department has been re-organised recently and provision made to meet the more urgent requirements of rural areas. The Sericulture Department has been expanded, road construction work accelerated, communications greatly improved, increased facilities provided for tourists and the development of industries given special attention. New industries have been started with capital provided by the State and increased credit and financial facilities provided for private enterprise. The strenuous efforts made during the comparatively short life of the present administration to reduce unemployment and to stimulate trade and industry in every way must be recognised but Unemployment remains a serious problem. With the numbers of educated young men leaving the schools and colleges increasing every year there is no sign of reduction in the numbers of educated unemployed in spite of all the efforts of His Highness' Government in this behalf. No improvement is likely unless and until educated young men turn to trade and industry for occupation rather than continue to seek to obtain some post in government service. The dictum of the Unemployment Commission that there is no facile remedy for educated unemployment and that remedial measures involve hard work, courage and expenditure stands. Since 1937 His Highness' Government have worked hard, shown courage and incurred heavy expenditure. The problem remains unsolved but much has been done to lay the foundations for improvement in the future and it is but fair to say that real industrial development in the State is nearer now than it has even been before. Much depends on post-war conditions throughout the world. India is but a wheel in the world trade machine and the Jammu and Kashmir State but a cog in that wheel.

36. **Possibilities of Development.** — In spite of the somewhat gloomy view taken of the unemployment problem there are grounds for hoping that the work done since 1937 will soon commence to show results. Good roads are under construction in many districts and irrigation schemes are receiving consideration. Apart from the money put into circulation in the form of wages, agriculture and trade must benefit from

the improved facilities for transport and distribution of commodities. To give one instance, the new road from Batote to Bhadrawah should open up the whole of that country and stimulate the fruit growing industry there. An extension from Doda on the road mentioned to Kishtwar will open up a large land-locked area, facilitate the relief of food shortage in years of poor harvests and encourage the increased growing of fruit and walnut trees.

Improvements in the road connections between Mirpur District and the Punjab are urgently required. Easy access to Mangla on the Jhelum would hasten realisation of the project to erect a paper-mill there. There is no motor bridge over the Jhelum river between Kohala and Jhelum, a distance of over eighty miles; such a bridge and connecting motor roads are urgently required to improve communications and facilitate trade.

At the end of the last decade a survey was completed for the extension of a broad gauge railway line from Jammu (Tawi) to Akhnur on the Chenab River. Construction in the near future is probably out of the question but with the end of the world war and a fall in the price of materials to normal levels the project should be taken up. But to exploit the possibilities to the utmost the line should go beyond Akhnur and be extended further up the Chenab Valley. The Reasi District is rich in minerals and the working of these deposits depends on rail-head facilities. The position is that the extension of the railway from Jammu to Reasi, or even to Akhnur, will not be justified unless some definite and practical scheme is evolved to work the mineral deposits of Reasi on a large scale; these cannot be profitably exploited without the facilities provided by rail connection. It seems obvious that the two schemes should be worked out together for the benefit not only of the State and its people but for the railway system in Northern India too. If coal and iron can be worked successfully, and large deposits of both are said to be accessible for comparatively easy working, the advantage to all concerned, and not least to the railways, of an assured supply of coal does not need to be emphasised.

The State possesses immense possibilities for the development of hydro-electric power schemes. No new schemes have been undertaken in recent years but a large and important Indian engineering company has recently studied the existing undertakings in Jammu and Kashmir and made suggestions regarding improvements and new schemes. The war and

the present high prices for all materials preclude the commencement of such enterprises now but as soon as better conditions prevail the development of comprehensive schemes should come under consideration. The possibilities include increased supply of power to Srinagar, provision of electric power to run the proposed paper-mill at Mangla, increase the supply to Jammu and meet the increasing requirements at Miran Sahib and Ranbirsinghpura. In order to take full advantage of the period which must intervene before any large scale project can be taken up, it is understood it is intended to survey thoroughly the transmission lines to Mangla and Jammu and to estimate accurately the material required so that when the opportunity presents itself prompt action can be taken to place definite orders. Meanwhile, it is proposed to instal a small thermal plant at Miran Sahib for industrial requirements there and to give an additional supply to Jammu and for the proposed sugar mill at Ranbirsinghpura. Communications, water and adequate power are the essentials for the development of our industries. Assuming these prerequisites the possibilities may be summarised:—

- (i) The expansion of fruit and vegetable growing and the development of a drying, preserving and canning industry.
- (ii) The installation of mills for the production of paper pulp and newsprint.
- (iii) An up-to-date Research Laboratory has been opened at Jammu to carry out a survey of all the drug producing plants in the State. When preliminary investigations have been completed and the strength of the drugs that can be produced has been standardised, the way will be clear for the manufacture of pharmaceutical preparations on a semi-commercial scale to prove which products can be manufactured satisfactorily on a large scale.
- (iv) The production of essential oils is contemplated as a part of the scheme covering the preparation of drugs.
- (v) A glass making plant and a tin-making plant are possibilities in conjunction with drug making and other projects.

- (vi) Anti-erosion operations on a large scale are contemplated under the direction of the Revenue and Forest Departments and should provide scope for employment on a large scale.
- (vii) In the past Japan supplied a large proportion of the world's real silk demand and sold at a price which other countries found unprofitable. The supply from this source is now cut off giving an excellent opportunity to other producing countries to expand and improve the industry. Silk-weaving has recently received a stimulus owing to the demand for parachute cloth; a second weaving plant has recently been opened in Srinagar.
- (viii) Surface working of the Reasi coal deposits has been commenced recently; the possibilities of the future are considerable. Other minerals that may in the future be worked are sulphur, borax, graphite, gypsum and iron. The production of sulphuric acid is contemplated as well as a thorough search for petroleum.
- (ix) The woollen industry has distinct possibilities but the goods produced must be standardised. The Sheep Breeding and Research Farm at Banihal is in its infancy. In the course of time it might well produce valuable results by improving the quality of the wool grown in the country.
- (x) A cotton-weaving industry has been started at Mirpur recently; it is too early to say if it can be maintained on a competitive basis when the abnormal demand created by the war disappears.
- (xi) A sugar mill is to be constructed at Ranbirsinghpura and is expected to be working by 1943. An Alcohol distillery is to be installed to work in conjunction with the sugar mill.
- (xii) A small industry was started recently for the preparation of oat-meal and pearl barley. The establishment of a factory for large scale production is contemplated. The products

have met with immediate success and it is possible they will be able to stand competition from imported preparations even after the end of the world war.

37. **Wages and Indebtedness.**—So far as wages are concerned industrial development should not operate at a disadvantage. The average agricultural labourer's wage is between five and six annas a day; in urban areas the daily wage for a casual labourer is from six to eight annas. Skilled workers and artisans earn from about ten annas to Rs. 2 per day according to their skill and the demand for their services; very few earn as much as Rs. 2 and the average is probably about Rs. 1-4-0. Clerical workers are available in almost unlimited numbers at a monthly wage of Rs. 20; there are many graduates willing to accept any post with prospects at Rs. 30 p. m. to start with. Labour, either manual or clerical, is not organised; there are no labour bureaux for the registration of workers requiring employment. If there were, perhaps rates for all categories would be more even.

No thorough economic survey has ever been carried out in the State and it is quite impossible to state the position with regard to indebtedness with any claim to accuracy. It is, however, safe to say that there is a great deal of indebtedness. The actual amount per head of the population may be small but nevertheless it is sufficient to act as a millstone round the necks of the majority. The peasant's crop of rice, maize, wheat or any other crop is usually mortgaged before it is ready to cut and he is fortunate if sufficient is left to him and his family until the next harvest is due. The ghee (clarified butter) made from the milk produced by the Gujjar's cows and buffaloes is not his to dispose of as he likes; it is due to the village bania or money-lender in liquidation of debt. The embroiderer, wood-carver, carpet-weaver, papier-mache maker, worker in silver and other metals, and others all have to work for wages lower than they could otherwise obtain because having received advances they must carry on with their employer or become involved in more serious difficulties. Many of the house-boats rented to visitors to Kashmir are not the property of the nominal owner but are mortgaged to the hilt to the agencies and others who control the letting of the boat. These instances are not given in an attempt to ridicule the peculiar system of 'credit' which oils the wheels of agriculture, trade and industry in the State but to emphasise that

borrowers and those in debt constitute an important proportion of the population and that incentive is weakened by the hopeless condition of indebtedness in which many are placed. The results of hard work so sweet to the free worker are not enjoyed by the man in debt; he has to pay any extra earnings with most of the rest to his creditor. In many cases heavy debts are inherited and are passed on from father to son. The most usual causes of debt are ceremonies and litigation; the cost of marriage ceremonies is out of all proportion to earning capacity. The father of a large family of girls is condemned to a life of indebtedness, particularly if he belongs to the Hindu community and lacks ample means.

38. **Transport.**—The absence of railways, except for the short branch line of the North Western Railway which runs from Sialkot to Jammu City and serves a very small area of the State, makes other methods of transport all the more important, particularly motor transport. Previous to the development of motor transport in Northern India, which commenced about 1910, tongas, ekkas and bullock carts carried all imports and exports from and to railhead. The motor lorry revolutionised transport to and from the State. Up to 1939 motor traffic was increasing annually but the requirements of the war have naturally checked this for the present. In 1931 there were 545 cars and 767 lorries registered in the State. In the decade 1931-40 431 cars and 898 lorries were registered. In the spring of 1941 the number of locally registered vehicles operating in the State was 254 cars and 636 lorries. What happens to old and broken cars and lorries? This is almost as much a mystery as what happens to dead donkeys. To continue, there were 850 lorries, registered within and without the country, in service in the spring of 1941 on State roads. During the decade lorry traffic has increased by about 40 per cent. on the Jhelum Valley route and by about 20 per cent. on the Banihal route; the increase in car traffic, as distinct from lorries, was about 35 per cent. for the former and 20 per cent. for the latter. On those roads unfit for motor transport commodities are carried by tonga or pack-transport and on the bridle paths and foot paths in the hills by pack-transport and coolies. On the mountain roads to Gilgit and Ladakh wheeled vehicles cannot go; transport consists of pack animals and coolies, mostly the former.

39. **Telegraph and Telephone.**—Considerable expansion and development has taken place during the decade in the telegraph and

telephone services. Telegraph offices have been opened at many distant places not previously connected. Wireless stations have been opened at Jammu and Nowshera cantonments in the Jammu Province. The telephone service has been greatly improved by the construction of a trunk line between Srinagar and Jammu which is linked up with the British Indian system. The capacity of the exchanges at Srinagar and Jammu has been increased and the old magneto system replaced in part by a modern Automatic Exchange. The service has been extended to a number of important centres thus increasing the facilities for visitors to get into telephonic communication with places throughout India.

✓ 40. **Municipalities and Town Areas.**—There are two important municipalities—Jammu and Srinagar; both have advanced during the decade but much still has to be done in both before those responsible for municipal affairs can feel that the more urgent requirements have been satisfied. In Jammu anti-plague measures have been effective during the decade and conservancy arrangements improved. The watering of the streets is now done by water carts instead of by mashkies. A market with well constructed stalls has been opened for the sale of fruit and vegetables. Four public gardens have been provided and the roads have been tarred. Street lighting and the drinking water supply have been extended and improved. Built on the side of a hill, Jammu City enjoys a good natural drainage system and the filling up of unwholesome pits and tanks has added considerably to its health. The scheme of training selected women for midwifery work carried on by the Womens' Welfare Association is claimed to have done much to reduce infantile and maternal mortality. The birth rate shows a good increase during the decade and the death rate an appreciable fall. In Srinagar, similar progress has been made with regard to the watering of the streets and improved conservancy arrangements. A generous contribution was made to assist the work of the Womens' Welfare Association and good results are claimed. Roads have been improved and new landing places constructed on the river banks but much still remains to be done in both respects. Street lighting and the drinking water supply have been extended and improved; lorry and tonga stands have been provided in various parts of the city in the interests of better traffic control. An effort has been made to relieve congestion by opening up new areas for residential purposes. Srinagar is not so fortunate as Jammu in the matter of drainage. For

several decades the bed of the Jhelum, which passes through the heart of the city, has been rising. After every threat of floods the bunds are raised and now much of the municipal area is below the level of the river for several months of the year. Drainage and sanitation are big questions which will have to be tackled in a big way very soon if health conditions in Srinagar are to be maintained, let alone improved.

Up to 1933 there was little in the nature of local administration in the towns. Baramulla and Sopore in the Kashmir Province and Udhampur and Mirpur in the Jammu Province were Notified Areas under the control of local committees but they did not function well for lack of funds. In 1933 Town Area Act No. IV was enacted and those places declared Town Areas by government were required to conduct their local affairs in conformity with its provisions. The Act was found to be defective in certain respects and was replaced by a new Act in 1940 which enlarged the powers and functions of the Town Area Committees and gave scope for the development of local administration by elected representatives of the public. At the end of 1940 there were 25 Town Areas—10 in the Kashmir Province and 15 in the Jammu Province. Powers were given to Town Area Committees to raise funds by levying octroi, ground-rent, registration fees on the sale of cattle and a number of other minor sources of revenue. Whilst the resources of all are strictly limited most of them are self-supporting with the grants given to them from time to time from the general revenues of the State. The Town Area Committees consist of nominated and elected members; the chairman is usually an official but not always. For some time to come the nomination of officials as members of these committees is likely to continue to assist and guide the elected representatives of the public. The creation of these committees has had a good effect in introducing a sense of civic responsibility. Town roads and lanes have been paved and drained, latrines provided, lorry and tonga stands established, slaughter-houses built, lighting plants installed and arrangements made to combat outbreaks of fire. The funds of Town Areas are supplemented by subventions out of the Sanitation Cess collected at the rate of one pice in the rupee on Land Revenue assessments. In several towns drinking water supplies have been greatly improved and there has been marked improvement in other respects too. These local institutions are in their infancy; with proper guidance by official members and a desire to effect improvements on the part of the elected

representatives real progress should have been achieved before the next Census in 1951.

41. Judicial and Police.—Any picture of the social and economic conditions obtaining would be incomplete without a brief outline of the machinery for the administration of justice and the work of the police. 1928 is an important date in the judicial history of the State. In that year a High Court was created, comprising a Chief Justice and two Puisne Judges, independent of the Executive. From 1931 to 1933 there was a considerable degree of lawlessness connected with the disturbances already referred to; the magistracy performed their difficult duties with credit. In 1936 a committee was appointed, under the presidency of a judge of the High Court, to inquire into the prevalence of corrupt practices in the public services and to formulate proposals to eradicate them. Order No. 1 of 1928 which governed the constitution of the High Court was repealed by Act XIV of 1936, corresponding to 1939. The new Act provided for the creation of a Board of Judicial Advisers to assist His Highness the Maharaja Bahadur in the disposal of appeals from the High Court. An Appeal Act specified the class of cases in which appeals from the orders of the High Court might be taken to His Highness. The Act of 1939 also provided for the appointment of an Advocate General. The Board of Judicial Advisers performs in the State functions similar to those of the Privy Council in the case of British India.

During the decade the jurisdiction of the High Court was extended to the Poonch and Chenani Jagirs thus giving the inhabitants of the two Jagirs the benefits of an organised judiciary. The number of courts exercising jurisdiction has increased for all classes of cases; the number of practising advocates on the rolls of the High Court has increased from 184 to 287.

The disturbances which occurred in the first three years of the decade imposed a great strain on the police force; large numbers of additional police were enlisted to supplement the permanent force, the strength of which was inadequate to cope with the conditions that arose. Many of these additional police were retained but they lacked the training of the regular force. As soon as circumstances permitted the organisation of the force was overhauled and instructional courses were opened for drill and to impart knowledge of the law and police rules. The practice of sending sub-inspectors for training to the Police Training School at Phillaur was resumed and a new Police Training School was opened in the State in 1938, with a curriculum

based on the Phillaur Training School, for the training of head-constables and constables. These measures have indubitably raised the standard of efficiency of the whole police force. The degree of literacy in the lower ranks of the force has been raised; in 1940 there were 1,133 literate constables representing a percentage of 45.6 against 643 in 1931. The number of police-stations in charge of sub-inspectors has increased from 55 to 71 and of police-posts in charge of head-constables from 39 to 50. A prosecution staff has been created consisting of inspectors and sub-inspectors, the former being specially enlisted graduates in law, to strengthen the agency entrusted with this part of the department's work. The total strength of the force has been slightly reduced but the terms of service have been improved. Expenditure has increased from Rs. 1,258,000 to Rs. 1,289,000. Crime has increased slightly under most classes but there has been a welcome fall in cases of dacoity from 385 in 1932 to 19 in 1940; the figures for 1932 were abnormal owing to the disturbed conditions throughout the country.

42. **Age Distribution.**—Having discussed the various aspects of life and conditions in the State it will be profitable to see how the population is distributed by age groups. These are given in considerable detail in Imperial Table VII and its subsidiaries. As the notes to the tables make clear, the tendency for the numbers in the various age-groups to decrease after a certain stage is more regular on this occasion than at the previous Census. In 1931 the decrease commenced after the group 0-5; at this Census the decrease commences after the age group 5-10. The percentage of older people to the total population is a little higher in 1941 than it was in 1931. The increase in the age groups from 35-40 upwards is 13.7 per cent. against an increase of 10.3 per cent. for the whole population. This shows a tendency towards a prolongation of life in the older groups. The notes to Table VII, with special reference to Subsidiary V, mention the preference shown by those being censused, and by enumerators when they have to make a guess, for certain numbers, particularly those ending with 0 or 5. The Assam Census Report for 1931 in discussing this feature quotes from the report of Mr. H. G. W. Meikle, Actuary to the Government of India, entitled "Report on the Age Distribution and Rates of Mortality deduced from the Indian Census returns of 1921 and previous enumerations" and published in 1926 by the Government of India Press, Calcutta. The passage referred to reads as follows:—

"If an enumerator had to guess the ages

of a lot of old men of about age 80 he would enter most as aged 60, 70, 75, 80, 85, 90, 100 or possibly even 120. It would be absurd if he were to guess many as aged either 77, 79, 81, 83 etc. At the youngest ages, say under 8, there is little preference shown for any particular age other than 5. At ages between 8 and 24 the preference is for even numbers and for age 15. Any one guessing the age of children aged about 10 would unconsciously enter more at 8, 10, 12 etc., than at 7, 9, 11, 13 etc. At ages 20 and over the largest numbers are found at each of the decennial ages. In this way 0 is much the most popular digit. The next most popular digit is 5".

The preference for round numbers in India is obviously due to the fact that a large proportion of the population does not know its own age. In addition, we get errors as a result of deliberate understatement or overstatement for various reasons. In dividing the population into age groups provision is made by a method known as 'smoothing' to overcome this feature of the age returns, as far as possible, but it must be recognised that our age returns are not accurate. However, since the idiosyncrasy referred to has been a feature common to every Census previously taken too, and as it is well known to all actuaries and those studying our age tables, the error they contain does not destroy their value.

Experts in demography place great importance on the distribution of the population in certain main age groups; these are 0-15, 15-45 and all over 45. It is obvious that these three groups represent respectively the parents of the future, the present re-productive elements, and those who have passed the reproductive ages. The question has, of course, special reference to the females in these particular groups. The female is obviously much more important in questions relating to race reproduction than the male and the reproductive capacities of the latter are spread over a much longer age period. To be progressive, in a demographic sense, 40 per cent. of a country's population should be in the age group 0-15; less than 33 per cent. is considered to indicate a stationary position and a country is said to be regressive with less than 20 per cent. in this group. The relative figures for the Jammu and Kashmir State at this Census show 39.5 per cent. of the males in this group, 40.7 per cent. of the females, and 40.1 per cent. of the whole population. The figures for the

main communities are Sikhs 44.7 per cent., Muslims 40 per cent., Hindus 37 per cent. and Buddhists 30.5 per cent. On the basis of these figures the Sikhs and Muslims are progressive, the Hindus hovering half way between a state of being progressive and stationary and the Buddhists a little less than stationary. At the 1931 Census the percentages for this group were slightly higher for males, females and the whole population. The re-productive groups 15-30 and 30-45 also have an important bearing on the increase to be expected in 1951. If we compare the figures in these groups with those for 1931 we find that the percentages in the group 15-30 at this Census are slightly below those for 1931 in all three cases—males, females and total population. In the age group 30-45 the position is slightly different; the figures for males, females and total are respectively 18.7 per cent., 18.1 per cent. and 18.5 per cent. in 1941 against 19 per cent., 17.5 per cent. and 18.3 per cent. in 1931. Our group 5-10 at this Census contains a larger number of the population than any other five year group; the largest group in 1931 was the 0-5 group. The 5-10 group at this Census also shows a bigger percentage of females to males than in 1931; all the females of the 1941 age group 5-10 will have entered the re-productive group 15-45 before the 1951 Census. It is not intended to make any predictions but the view may be hazarded that with other factors equal the percentage increase in the population at the 1951 Census will exceed that for 1941. An increase in excess of 10.3 per cent. is no light matter and is bound to strain our resources to the utmost. If the means of subsistence do not increase to a similar extent then the various checks to population will operate with increased force to correct the position. We need not examine the age groups for 45 and over closely. It will suffice to record that the percentages for the groups 45-60 and 60 and over in every case exceed those for 1931; longevity has increased.

43. **Sex.**—In demography at any rate the females of the species are more important than the males. The number of females per thousand males of the total population at this Census was 888 against 881 in 1931, 890 in 1921 and 887 in 1911. It is not proposed to go into further details here. These and other sex ratios are given in the subsidiary tables following Imperial Table VII. The predominance of males throughout India has been the subject of much discussion in the past. In the countries of Western Europe females are usually in excess and from time to time the accuracy of Indian sex statistics has been impugned on this account. It must be assumed that such critics are not conversant with

social conditions in India. In the Indian Census Report for 1911 Sir Edward Gait in refuting criticisms of the kind referred to pointed out that social conditions in India were entirely different from those obtaining in Europe, that in Europe boys and girls have an equal chance whereas in India boys frequently receive greater attention during the earlier years of their lives. In India girls are usually given in marriage at an early age and on this account are exposed to greater dangers at the time of child birth than those normal in the case of mothers of more mature age. These conditions still obtain today in spite of the great advances made. Any one with any knowledge of India knows that the female, up to the age of 20 at any rate, is exposed to far greater risks than the male. What is true of India is true of the Jammu and Kashmir State in this respect. During the last fifteen years, in particular, reformers have been working to get the age of marriage postponed, both for boys and girls, until they have reached a more mature age. Infant Marriage Acts have been passed throughout India and the government of the Jammu and Kashmir State was one of the earliest to pass such legislation. The minimum legal marriage age for girls is now 14 and for boys 18. But the education and enlightenment of the mass of the people on this subject is likely to have far more practical effect than legislation. The tendency amongst educated classes today is to postpone the marriage of both their boys and girls to a more mature age. The standard of midwifery and the treatment of maternity cases have improved much in the last two decades. The full effect of these changes will not be apparent at once but it is probable that the ratio of females per thousand males from now on will show a steady improvement in the State until the ratio approaches that for the whole of India which, in 1931, was 940. The subject is one not likely to be neglected by the demologist and it is perhaps better left to him.

44. **Civil Condition.**—Imperial Table VII and its subsidiaries, especially subsidiaries viii, ix and x, give details on the subject of civil condition, that is to say the unmarried, married or widowed state of all elements of the population at all ages. Those not conversant with conditions in India must realise that the word 'married' does not mean the same in India as it does in western countries. In the latter it is synonymous with cohabitation; in India, and the same applies to the Jammu and Kashmir State, the so-called infant marriages mean nothing of the sort. These infant marriages are more in the nature of irrevocable betrothals. Normally, the girl wife

remains in the home of her husband's parents except for short intervals when she returns to her old home to see her parents. It is not until after the age of puberty that cohabitation between the young bride and bridegroom usually occurs. The Infant Marriage Act passed in 1929 prohibits the marriage of girls below the age of 14 but the tables show that at the time of the Census there were over 4,000 married girls and over 600 widowed girls in the age groups 0-15 and over 1,000 married girls in the age group 0-10. Many of these girls may be in the last year of the group but it would seem that infant marriage continues in spite of the Act. There were 99 married girls in the 0-5 group in 1931 so there have been many marriages of girls under 14 since the Act was passed. However, the number of married girls in the age group 0-15 is well below the figure for 1931. The proportion of unmarried, married and widowed may be accepted as correct but the statistics relating to civil condition by age are, of course, subject to the same defects as the age tables. The attitude to marriage in India is entirely different to that obtaining in western countries and this fact must be appreciated before any attempt is made to study the figures relating to civil condition in India, much less to discuss them or compare them with western countries. In India, and in the Jammu and Kashmir State, it is the aim of all parents belonging to the main communities to get their children married as early as possible and it is the aim of all to beget children as soon as the parties to a marriage have reached the age of puberty. In particular, the Hindu male must marry and obtain a son as early as possible to perform his funeral rites; a Hindu maiden, unmarried at an age considered suitable by local Hindu Society, is a creature pitied or derided by others of her community but seldom approved. It must however be recognised that many of the less conservative and more progressive elements appreciate the advantage of postponing the marriage of their daughters until an age when they are physically and mentally fit to endure the strain of pregnancy and childbirth. Amongst Muslims too early marriage is usual. Sikhs usually do not marry until the age of puberty; Buddhists usually postpone marriage later than any other of the main communities. Although the tendency is growing amongst the educated classes to postpone marriage to a later age, the immediate effect of the passing of the Infant Marriage Act was to cause a rush of infant marriages before the Act came into force. A later effect has probably been to over-state the ages of brides under the legal age for marriage. With

or without the Act the tendency is towards later marriage, especially in the case of the boy, but it is too soon yet to gauge the effect of legislation or public opinion on this subject. By the next Census some changes in civil condition amongst the early age groups should become apparent. There should be no married females under the age of 14 and it would be well worth-while to produce a table showing the number of married boys and girls for each year up to the age of 18. India will always be a country of early marriages and for many obvious reasons it is well that this should be so; the reduction in the number of infant marriages, as distinct from marriage between young people, will probably be more influenced by the spread of education and a change in outlook rather than by legislation.

45. **Education.**—Reference has already been made to the recommendations of the Unemployment Commission for the appointment of a committee of educationists to consider and report on the educational system. The Committee appointed went into the subject very thoroughly and as previously mentioned submitted their report in 1939. They advocated many changes; the most important was the recommendation to introduce what is termed Basic Education, that is to say, the essential minimum of education—which is to centre round appropriate forms of craft work—required to equip any person for intelligent citizenship. It was considered that the full course of basic education should extend over a period of seven years and gradually replace the old system of Primary Education which extends over a period of five years. The Committee gave the opinion that a period of five years primary education was insufficient for the attainment of literacy and that most boys whose education was discontinued after completion of the primary course of education relapsed into illiteracy.

Considerable educational progress has been made during the decade. The physical features of the country do not facilitate the spread of education. Many of those living some distance from the towns are ignorant of and indifferent towards the benefits of education. In 1929 the educational machinery of the State was reorganised. The posts of Director of Education and Chief Inspectress of Girls Schools were created to coordinate and control all educational activities. The former post was reduced in 1931 as an act of retrenchment but was restored in 1932. At the same time the post of Special Inspector for Muslim Education was created to stimulate greater interest in education amongst Muslims.

The aim of His Highness' Government is the provision, in due course, of a primary school for boys in every village with a population of over 500, the steady expansion of primary schools for girls and the opening of an increasing number of Middle and High Schools for both sexes. The number of institutions for both boys and girls has increased considerably and the number of scholars in proportion. Expenditure has increased on boys schools from nearly Rs. 14 lacs to a little under Rs. 18 lacs and on girls schools from just over Rs. 2½ lacs to over Rs. 3½ lacs. The systematic training of school teachers has been taken in hand and, on an average, ten graduate teachers have been deputed at Government expense annually for training in the B. T. class in the Training Colleges of British India. Scholarship grants have been increased and special scholarships granted for communities which are educationally backward; under this scheme Muslims, Rajputs, Harijans Sikhs and students from the Frontier Districts have benefited chiefly. In 1930 compulsory education was introduced in the cities of Jammu and Srinagar and in the towns of Mirpur, Udhampur, Baramulla and Sopore. To improve supervision the number of educational divisions each under an Assistant Inspector was increased. Special attention has been given to education in the backward Frontier Districts. To implement some of the recommendations contained in the interim report of the Educational Re-organisation Committee (1938), His Highness' Government sanctioned an extra grant of Rs. 130,000. The particular items provided for by this grant were a Teachers' Training School at Srinagar, the opening of Basic Schools at Jammu and Srinagar, Adult Education, Refresher courses for teachers, increased staff in educational offices, the provision of adult libraries, in cities, towns and villages the publication of adult readers and the construction of school buildings. The Adult Education movement was still in its infancy at the time of the Census and it is too early to estimate the extent of its success. It is reported that at the end of the decade 3,457 adult literacy centres had been opened throughout the State and that over 60,000 male adults were under instruction. To see what effect the campaign to remove adult illiteracy has on the percentage of literacy in the State we must wait until the Census in 1951. Girls education and the Technical Schools have been placed under the Director of Education to bring all educational activities under one control. Progress during the decade in various directions has been steady; the importance of an efficient educational organisation has been realised and the ever increasing provision of funds indicates the determination of His Highness'

Government to maintain a progressive and liberal educational policy.

46. **Literacy.**—The total number of persons recorded as literate at the 1931 Census was 123,386 excluding Gilgit Agency; of these 114,321 were males and 9,065 females. The percentage of literacy in 1931 works out at 5.9 for males and .5 for females. It was the realisation of this educational backwardness that gave birth to the movement to accelerate educational expansion. The interest of the masses has been quickened and the value of education realised to a greater extent than previously. The standard of literacy for Census purposes is as low as it can be if the word is to have any real meaning. Any person who can read a simple letter in any language and write a simple reply is deemed to be literate. We have to depend a good deal on the enumerator's interpretation of our definition and, simple as the test is, it is probable that the Census figures exaggerate the extent of literacy rather than the reverse. However, the standard of education of our average enumerator is not deteriorating from one Census to another and we may assume that the enumerator's standard for showing a person as literate in 1941 was higher than in 1931. As in 1931, no one below the age of 5 is shown as literate in the tables whatever may have been recorded in the case of infant prodigies in the Census record. The 1941 figures for literates show a big advance for both males and females. Special reference is necessary to the literacy figures for Buddhists as a community and for Ladakh as a district. The figures for 1941 show an improvement on those for 1931 but it is thought that for neither Census do they reflect the true position. A high percentage of Buddhists over five years of age is reported to be literate in their own language, Bodhi or Bhotia; some local officials and travellers have put the figure as high as 90 per cent. amongst adults. It would seem that the Census agency in Ladakh—there are few Buddhists in the State outside Ladakh—at this and previous Censuses has not recognised literacy in Bodhi as literacy at all for the purposes of the Census. This, of course, is entirely wrong and is a matter for special attention at the Census in 1951. There is no need to go into all the details of literacy here; the figures are given in Imperial Table XI and its subsidiaries.

47. **Sabhas, Societies and the Press.**—There appears to be no previous record of the Sabhas or Societies in the State. Many of them are active for a short time and then fade out of existence through lack of interest or support. In all they numbered 435 in the spring of 1941. Since then

some of those listed will probably have become defunct whilst others will have come into existence. Of the total, 125 may be classed as social, 258 religious and 52 political.

The local Press has made a big advance during the decade. The first newspaper was registered in 1924 figures are not available of the number in circulation in 1931 but in the spring of 1941 there were 44. Some last for a short time only; others are published at long and uncertain intervals but a fair number are issued punctually and regularly. Most of them are published in Hindustani, in both Persian and Devanagri script, chiefly the former; a few are published in English. The standard of journalism is improving. Circulation figures are not available but the copies of papers purchased are to be counted in hundreds not thousands. The free expression of a variety of opinions is all to the good but there are so many newspapers for the comparatively small newspaper-reading public that most of them hover between life and death.

48. **Archæology.**—The State is rich in places of archæological interest; these consist chiefly of the ruins of ancient mosques and temples. Excavations were restricted in the early years of the decade owing to lack of funds due to the re-actions of the world trade depression of 1929 onwards but during the latter half work was resumed and discoveries of interest to the student of archæology were made at Martand and Gilgit.

49. **Languages and Scripts.**—The chief languages in use in the State are Kashmiri, Dogri and Punjabi; Hindustani is the language most commonly used as a subsidiary for conversation between the different elements of the population having a different mothertongue. English is spoken well by a large proportion of the educated classes. The area in which each language is used and the extent to which it is used are given in great detail in Imperial Table XII and its subsidiaries. It is only necessary here to say that the figures for Hindustani are inflated as the result of the Urdu-Hindi controversy. Propaganda was carried on during the Census by the adherents of both parties to the dispute with the result that many Hindus gave Hindi as their mother tongue and many Muslims gave Urdu quite contrary to the facts in the great majority of cases. The dispute is largely political and so to keep politics out of the Census it was decided to lump Hindi and Urdu together as Hindustani. There are few people in the State who can rightly claim Hindi or Urdu as their mothertongue. The real dispute is in the use of script. The old indigenous script of Kashmir is called Sharada. As a popular script

it enjoyed reputation far and wide for over a thousand years. Almost all the inscriptions in Sanskrit incised on stones whether at Martanda or other monumental places are written in the same. The birch bark manuscripts, nay even the paper ones used to be copied in the same script before the advent of the Devanagri. That in most common use now and in the near past is the Persian script; the Devanagri script is that in which Hindi as opposed to Urdu is usually written and it is the script in which Sanskrit is written. The Hindu element of the population is naturally anxious that the script should not be allowed to go into disuse or a knowledge of it denied to their children. To meet the demands of the two main communities in the State His Highness' Government issued orders towards the end of 1940 that the common medium of instruction in schools in future would be simple Urdu and that the Persian and Devanagri scripts would both be taught and used. Students have been given the option of choosing either of the two scripts for reading and writing. Thus in future Students in Schools will be taught either the Persian or the Devanagri script at the option instead of only one script is Persian being taught to all.

50. **The Population Problem.**—The population problem in India has been discussed by students of demography from one Census to another and it may be presumed that this occasion will be no exception. In his book entitled 'The population problem in India', the revised edition of which was published in 1934, P. K. Wattal quotes the following from page 145 of the official report 'India in 1930-31':—

"An advance of 10.6 per cent. in ten years is in itself startling enough, but it becomes vastly more so when it represents an addition of 34,000,000 persons to the country's population".

He gives the following from Dr. Hutton's All India report on the 1931 Census:—

"this increase is from most points of view a cause for alarm rather than satisfaction".

Wattal also quotes Major General A. J. H. Russell as saying in 1927:—

"the population of India is very near its saturation point, and for all practical purposes, it may be taken as proved that India as a whole is already over populated".

That was with reference to the 1921 Census when the population was 319,000,000 including

Burma which is not included in the figures for 1941. What then is to be said about the All-India increase of 15 per cent. in the decade 1931-41 and an actual increase of over 50,000,000 persons bringing the total to 388,800,000 (excluding Burma). The percentage increase of population is getting higher each decade and at each Census this naturally involves a higher actual increase of persons. The All-India population has increased by about 70,000,000 (excluding Burma) in two decades or say, in one generation. It is clear that the dangers to which Wattal referred have increased and the necessity for applying the remedies which he advocated becomes more urgent. The increase in the Jammu and Kashmir State was 9.8 per cent. in 1931 and 10.3 per cent. for 1941, against 10.6 per cent. and 15 per cent. respectively for All India, that is to say, an increase of 701,098 actual persons in one generation or just over 21 per cent. The position at first sight is not so serious for the Jammu and Kashmir State as for India as a whole but it must be remembered that the Jammu and Kashmir State is still almost entirely agricultural whereas India, although still mainly agricultural, is being rapidly industrialised in many areas. If an increase of 10.6 per cent. for All-India in 1931 gave the experts cause for alarm then an increase of 10.3 per cent. for Jammu and Kashmir in 1941 is equally, if not more, alarming. Wattal, discussing the 1931 figures, says:—

“India today is the most populous country in the world, China not excepted. It is well known that agriculture can not support so dense a population as industry, per unit of space. Notwithstanding this, India, a predominantly agricultural country, with a density of 195 persons per square mile, is supporting a larger population per square mile than the highly industrialised continent of Europe with a mean density of 127, or the United States of America with a density of 41”.

This statement has more force in 1941 than it had previously. The density in the Jammu and Kashmir State rose from 43 in 1931 to 48 in 1941 but if we leave out the enormous areas of the Jammu and Kashmir State which are uncultivable and uninhabitable and take areas such as the Jammu and Anantnag Districts we get a density exceeding the figure for All-India in 1931 and if we base the density figures on cultivated areas only we get figures exceeding 1,600 persons per square mile in several purely agricultural

areas. Put this way the seriousness of the problem is more easily realised.

51. The Malthus Theory.—Population, according to Malthus, has an inherent tendency to multiply beyond the means of subsistence. From time to time economists of western countries suggest that the Malthusian theory no longer applies to the conditions of today. Comparisons are made between the low birth rate and the low increase of population in recent decades in countries of Europe and America and the high rate of increase in the production of food. It seems possible that in rejecting Malthus's dicta as out of date sufficient weight is not given to the extensive use of modern contraceptives as a check to population in western countries on the one hand and the defective distribution of the world's food stuffs on the other. It is all very well to say that world food production is in excess of world demand and that large quantities are surplus but the fact remains that whilst surpluses are rotting in some areas there are millions of persons suffering from want, under-nourishment and semi-starvation in others. Mal-distribution of food stuffs and mal-distribution of purchasing power are the real problems and it is to these that attention should be given rather than to attempts to prove that the Malthus theory of population no longer stands. In any case, we are concerned with the population of India in general and of the Jammu and Kashmir State in particular, not with that of Europe and America. Let us examine the Malthus theory. It has been stated hundreds of times but bears repetition. It is lucidly discussed in the book “Population—Today's question” by McCleary from which these details have been taken. Malthus formulated his principle of population in three propositions:—

- (i) Population is necessarily limited by the means of subsistence.
- (ii) Population invariably increases where the means of subsistence increase unless prevented by some very powerful and obvious checks.
- (iii) These checks, and the checks which repress the superior power of population, and keep its effects on a level with the means of subsistence, are all resolvable into moral restraint, misery and vice.

Malthus affirmed that the power of population to increase is infinitely greater than the power in the earth to produce subsistence for men and

that population, when unchecked, increases in geometrical ratio whilst subsistence only increases in an arithmetrical ratio. He held that the effects of these two unequal powers must be kept equal and that the checks on population constantly operating could all be fairly resolved into moral restraint, misery and vice. Misery, he thought, was an absolutely necessary consequence; vice he was not so sure about. He classed the checks to population under two heads—positive and preventive. He declared the positive checks to be extremely various and pointed out that they included every cause, whether arising from misery or vice, which in any degree contributes to reduce the length of human life. The positive checks therefore include unwholesome occupations, severe labour, exposure to inclement weather, poverty, bad nursing, life in large towns, excesses of all kinds, epidemics, diseases, wars and famines. Amongst the preventive checks he specified “promiscuous intercourse, unnatural passions, violations of the marriage bed and improper arts to conceal the consequences of irregular connections”; these he classed as vice. The one preventive check he did not class as ‘vice’ he termed ‘moral restraint’.

The geometrical ratio he had in mind was not any ratio but a particular ratio, *i. e.*, doubling every twenty-five years, and it was the ratio that would operate, not in any population, but in an unchecked population. His arithmetrical ratio was also a particular ratio and he regarded it as a maximum. He did not himself think it would be possible to increase the means of subsistence every twenty-five years by a quantity equal to that produced at the time he was writing, but he assumed that it would be possible in order not to overstate his case.

The popular idea of Malthus is that he prophesied that, if population went on increasing, dreadful things would happen at some future time. But the essence of his teaching is that the tendency of population to outpace the means of subsistence is, and always has been, constantly operating and is causing dreadful things, misery and vice, here and now, and has always done so. Some critics say that Malthus did not allow for variations in what he called “the passion between the sexes”. It has been contended that intellectual development and the increasing diversity of interests in modern civilised communities tend to diminish sexual feeling to such an extent as to constitute an effective check on population. But even if we recognise this tendency it is to be doubted whether it will even attain such proportions as to upset the Malthus theory.

Malthus regarded birth control as a form of vice and he would probably contend, if he could revisit the earth, that the success of modern methods of birth control in bringing down the birth rate in western countries supports his principle of population. He was of opinion that if it were possible for each married couple to limit by a wish the number of their children, there would be reason to fear that the indolence of the human race would be very greatly increased and that the population of individual countries would never reach its natural and proper extent. Malthus’s view that control of births is ‘vice’ makes his position secure. It must, however, be remembered that modern methods of contraception bear no comparison with methods of birth control used in the days of Malthus when to bring about an abortion was probably the most common method. Modern contraceptive methods are so effective when correctly applied that they may well produce the results forecasted by Malthus in his hypothetical case of the married couple’s wish. But we are concerned with India, not Europe. The methods of contraception now practised in western countries are practically unknown in India except in the cities; even where these methods are known the facilities for using them are limited and the cost beyond the means of the masses.

The conditions in India today in general, and in the Jammu and Kashmir State in particular, except amongst the more sophisticated elements of the population, more closely resemble the conditions in Europe in the time of Malthus than present day conditions in Europe and the Malthusian theory applies with full force to our population problems. The geometrical and arithmetrical ratios discussed by Malthus have been ridiculed by some but as Wattal puts it “they occupy the same place in demography as the conception of the economic man in political economy or the Euclidean point in geometry”.

52. Modern Methods of Birth Control.—Modern methods of birth control have indubitably brought about a big decrease in the birth rate in western countries. If we accept Malthus’s view that all birth control must be classed as ‘vice’, then his position is not upset by what has happened to the birth rate in western countries in the last fifty years. The contraceptive methods now practised were not known and outside practical consideration in the time when Malthus lived. If he were alive today he would probably approve of them; if the contrary is assumed then we must add

contraception to the three checks given by Malthus and his theory stands. McCleary attributes to Mr. J. M. Keynes the dictum that every country should determine what size of population is most expedient and set about getting it. This is a sound suggestion but to implement it is a different matter. Malthus's first proposition is that population is limited by the means of subsistence; his second that population will increase if the means of subsistence increases unless prevented by powerful checks; his third that the checks consist of moral restraint, misery and vice; in view of what has been said above we will add a fourth check—Contraception.

53. **Jammu and Kashmir State today.**—

Let us consider the population question with special reference to the Jammu and Kashmir State. In the past twenty years much has been done by His Highness' Government to improve agriculture and develop industries. The means of subsistence have been increased in many ways. Medical facilities have been improved, epidemics are being controlled with an efficiency not achieved in the past. We may assume with confidence that the efforts of His Highness' Government will be continuous and that agricultural and industrial development will continue to increase the means of subsistence but there is a limit and the problem becomes more difficult year by year. For some time to come the means of subsistence can be increased by providing better roads and communications to facilitate movement, reduce transport costs and improve the means of distribution of foodstuffs and other commodities whether grown in the country or imported. The cultivable and cultivated areas can be increased by the extension of existing irrigation canals and the construction of new ones. The land under cultivation can be made to produce more by the use of better methods, selected seeds and manures and by the consolidation of holdings. Reduction in the number of useless cattle will make it possible to maintain well a smaller number of better quality animals for both ploughing and milking and thus make for better farming and an improved diet resulting from an increased supply of milk products. An improvement in the breed of sheep will give an increased wool crop and increase the means of subsistence obtainable from this cottage industry. The development of industries dependent on the extensive forest areas can be expanded and the mineral deposits found in many districts of the State, Reasi in particular, can be exploited and new industries started. The silk industry may be extended, the tourist traffic encouraged and

new wealth and fresh means of subsistence created in every direction. But we can not get away from Malthus's law. However fast the means of subsistence increase, the population will keep pace. In fact, it is only the increased facilities and the increasing means of subsistence that have made possible the large increase of population in the last two decades. The expansion of this or that industry and the creation of new ones are not cures for poverty and unemployment in the long run because we cannot get away from the operation of Malthus's law that the greater the means of subsistence the larger the population in the absence of powerful checks. Admittedly, those at present unemployed, and fit to work in any new spheres of employment that may be created and thrown open to them, will benefit but they will be followed by larger numbers of unemployed in the future as soon as any slump or check to expansion of trade occurs. It would be well to recognise the fact that for a country which is predominantly agricultural the population of the Jammu and Kashmir State has already reached a dangerously high level on the basis of cultivated area. In the absence of a railway to serve the heart of the country and good motor roads to reach the more remote areas quick relief of food shortages, occasioned by local failure or partial failure of crops, is difficult and the nearer we get to saturation point for population the more difficult it will become. Although agriculture will continue for some time to provide increased means of subsistence greater reliance will have to be placed on industries in the future. The country cannot stand still; it must either continue to make progress and provide the means of subsistence adequate to support the increasing population brought into being by a continuous increase of the means of subsistence over a long period or retrogression will set in. As soon as there is a check in the provision of the means of subsistence Malthus's population checks, which are always operating, will come into play with greater force. Moral restraint as a factor will probably remain the same—at least for a time. Misery and vice as classed by Malthus will increase. As a result of more efficient administration and the activities of beneficent departments some of the positive checks which control population have lost power in the last two decades, and are still losing power thus partly accounting for, it is reasonable to assume, a higher increase of population than in the previous decade. Working conditions are being improved, hours of labour are being reduced, epidemics are being controlled with greater efficiency, diseases which

previously caused death are being cured more frequently, nursing of children has improved, maternity treatment is better. With many of the positive checks to population being weakened by the increase of knowledge and application of scientific methods the function of reducing an excessive population is likely to be thrown on to other checks, some positive others preventive; most of the latter have been classed by Malthus as vice. Migration is, of course, a remedy for over-population in any particular area and thousands of subjects of the State go to the Punjab every winter in search of employment but such migrations are mostly temporary. Most classes in the State are loath to leave their homes except for limited periods. But even if large numbers were willing to migrate, where can they go with any hope of finding the means of livelihood and a permanent home except in a comparatively few cases. The State is not the only place suffering from pressure of population. India as a whole was considered over-populated twenty years ago; since then there has been an enormous increase. We see on every side countries, provinces and states adopting what may be called a nationalistic policy in the matter of immigration and employment. This does not assist adjustment by migration, that is to say, by the transfer of large numbers of people from over-populated areas to others not so thickly populated. With the increasing nationalistic tendencies noticeable in the last decade everywhere, migration by those willing to become emigrants has been made more difficult. If the barriers are broken down everywhere conditions may become easier but this does not look likely at present. We are therefore thrown back on Malthus's checks and it seems that the most powerful of the positive checks in the future will be misery in the form of poverty, want and semi-starvation leading to weakness, susceptibility to disease and premature death. What of the other checks listed by Malthus—moral restraint and vice? We cannot assess the amount of moral restraint being exercised now or likely to be exercised in the future. Judging by the tendency in the past towards early marriage, which is now controlled by law, and the large families common everywhere, it is not a very powerful check. Vice in the Malthusian sense we may expect to increase as a check in pro-

portion to the weakening of other checks and the extent of over population.

54. **A Remedy.**—In these circumstances why should we not let our new check—contraception—play its part; in other words why not encourage birth control by the use of contraceptives as distinct from birth control after conception. The latter is rightly classed as 'vice'; contraception is not vice. This view has the support of thousands of religious and reputable persons. In the case of India, of which the Jammu and Kashmir State is essentially a part, the high death rate will only be reduced when the high birth rate is reduced. The waste of life from infantile mortality and child-birth at present is considerable. There are thousands of cases in which pregnancy takes place at the known risk of life to the mother. In thousands of families more children are not wanted; they cannot be properly clothed, fed and educated and yet they follow one after another in monotonous regularity to live a life of difficulty, handicapped from the beginning, and a source of pain and grief to all concerned. Surely, it is better to utilise the knowledge which science has placed within our reach. If the law of life and population is harsh why should we not soften it as far as we can. For the great majority of the population of the State there seem to be no religious grounds for objection to the use of contraceptives. Admittedly, the use of contraceptives is beyond the knowledge of the great majority of the people and beyond their means but the case for the use of contraceptive methods is beyond dispute if it is accepted that it does not run counter to religious teaching. It would not be possible to make the service available to all in the beginning but it is suggested that the opening of clinics in Jammu and Srinagar and in the larger towns be considered. It is unnecessary to go into details here; suffice it to say that the service should be conducted by a discreet and sympathetic staff. Service and advice should be free in certain circumstances and a fee charged to those in a position to pay. We should make good use of the knowledge we are fortunate enough to possess and give relief to untold numbers by some mitigation of the unrelenting laws of population.

**A note on the medical aspect of the decade 1931-40 by Colonel Sir Ram Nath Chopra, Kt.,
C. I. E., I. M. S., (Retd.), Director of Medical Services,
His Highness' Government, Jammu and Kashmir.**

INTRODUCTORY.

To prepare a comprehensive note on the conditions of the decade (1931-40) from the Medical and Public Health points of view is no easy task. The reasons are not far to seek. Much relevant data is needed and this is very difficult to obtain. Attempts were made to collect as many facts and figures as possible from the vital statistics available and this note is the result. In spite of its shortcomings it contains much valuable information.

The subject is dealt with under the following headings:—

- (1) Vital Statistics.
- (2) Epidemics and Important Diseases.
- (3) Venereal Diseases.
- (4) Dietetics.
- (5) General Sanitation.
- (6) Birth Control.
- (7) Conclusions.

(I) VITAL STATISTICS.

The importance of Vital Statistics cannot be denied. They are compiled from records which are maintained in the urban areas of the Provinces of Jammu and Kashmir by the Municipal authorities and in the rural areas by the Police Department. The village chowkidar regularly visits the thana or police chowki once, twice or four times a month, and more frequently, according to the distance of the village from the thana or the police chowki, and reports the births and deaths of his own village to the Police Officer, who in turn makes these entries in his register, which is the ultimate official record. The chowkidar, if literate—generally he is not—makes the entries in his book himself; otherwise he is supposed to get the information entered by any available literate person in the village, generally the village shopkeeper, school teacher, numberdar or patwari. The entries are then attested by the numberdar and taken to the thana for entry in the concerned register. Births and deaths are rarely missed. Not being conversant with the nature of diseases the chowkidar is apt to make mistakes regarding the cause of death. However, in the case of certain diseases like plague, small-pox, diarrhoeas and dysentery, cholera (if prevalent in epidemic form), tuberculosis of the lung (if associated with typical symptoms of prolonged fever, cough and wasting), measles, puerperal deaths, still births, asthma, injuries, senility and probably pneumonia, his report is generally accurate. "Fevers" is a heading under which he can often hide his ignorance of the actual cause of death—and he is not to be blamed for that. In the localities where malaria is rampant, the main bulk of deaths caused by fevers is attributable to malaria, especially so when such deaths occur during the malarial season. This fact is demonstrated by the figures given in Table 5 which show a very high incidence of deaths on account of fevers in the Districts of Jammu, Kathua, Reasi, Udhampur, Mirpur and Muzaffarabad—all notorious as heavy endemic and epidemic foci of malaria.

The record of deaths due to tuberculosis of the lungs probably represents an underestimate as the disease is not easily recognisable by a layman. Perusal of the records shows deaths recorded as due to 'fever' and cough with a duration of over six months; such are most likely cases of

tuberculosis of the lungs. Mistakes as to the cause of death, apart from the diseases mentioned above, are liable in the recording of the deaths of children and infants.

The object of stating at length the above facts is to show that the records of vital statistics cannot be considered inaccurate because of the original source from which they emanate though mistakes are apt to occur regarding the cause of death. The fact that a certain percentage of births and deaths may not be recorded cannot be ignored but for practical purposes the data are quite reliable.

The births and deaths for Kashmir Province inclusive of Srinagar city and those for Jammu Province inclusive of Jammu city are given annually for the decade in Table No. 1. The figures for Kashmir Province by districts are given in Table No. 2 (a) and those for districts of the Jammu Province in Table No. 2. From a perusal of these tables it will be evident that the number of births everywhere exceeds the number of deaths except in Kashmir Province in 1935. The following points are worth noting:—

- (i) In Kashmir Province the year 1936 shows the least number of deaths (34,958) and the year 1935 the maximum number (47,467). By far the worst year is 1935 as the number of deaths has exceeded the births. This was almost certainly due to a heavy epidemic of cholera which raged throughout the Valley during the summer of that year, and was responsible for 4,449 deaths. But for this epidemic the death rate would have been appreciably lower. 1940 is easily the best year; the number of births is 55,902 and deaths 38,580, *i. e.*, an excess of 17,322 births over deaths. Except for a small outbreak of small-pox in Kashmir Valley, Muzaffarabad District and Astore, which was very easily controlled, the year was quite healthy. 1936 was next best with an excess of 14,667. The death rate was high in 1933. This was apparently due to small-pox and typhus epidemics the former causing 237 deaths. In 1937 an epidemic of malaria visited tehsils Muzaffarabad, Uri and Karnah, causing a large number of deaths. In the subsequent year (1938) the birth rate was low and the death rate high. The latter was partly attributable to another epidemic of cholera in the Valley resulting in 287 deaths. The lower birth rate in this year could partly be accounted for by the malaria epidemic in the previous year. Taken as a whole there was a definite excess of births over deaths in the decade.
- (ii) The figures for Jammu Province present a much better out-look than those for Kashmir. In 1934 a bad epidemic of plague broke out; it was especially virulent in the Jammu District. The deaths from plague alone were 1,157. The decrease of births in this year can be explained by the fact that plague appears to show a special predilection for females of child bearing age. An attack of the disease generally destroys the foetus and often the mother and a consequent reduction in the recorded number of live births during the year of the epidemic is bound to occur. Plague also visited the Jammu District in 1933 with 783 deaths (Table No. 4). The high rate in the year 1935 is attributable to an epidemic of malaria which occurred in the province especially in the districts of Rajouri, Kathua and Jammu. On the whole, the excess of births over deaths is greater in the Jammu Province than in the Kashmir Province; 1936 and 1938 are the best years, the preponderance of births over deaths being 24,907 and 25,012 respectively. In this connection it may be mentioned that after a fall in the birth rate in 1934 there was an appreciable rise in subsequent years. That is what usually happens after a severe plague epidemic. In the first succeeding year, owing to the reduction in the number of child bearing women, the birth rate is not quite normal but in the second subsequent year it reaches a normal level.
- (iii) The figures for Ladakh District are self-explanatory. In 1931 the birth and death rates are 2,083 and 2,045 respectively—almost equal. In later years a slight excess in births is noticeable so that, after a decade, in 1940 the figures are 2,364 births and 2,043 deaths. The reasons for a low birth rate in this district are:—
 - (a) The country is very mountainous and contains vast desert and treeless tracts at altitudes from 12,000 to 18,000 ft. above sea level.

- (b) Rainfall is very scanty—the average is 5.7" and crops are poor.
- (c) Only 0.3 per cent. of the area is fit for cultivation.
- (d) The Small-pox epidemic in 1937 in Skardu Tehsil cost more than 1,000 lives before it could be brought under control.
- (e) A virulent malaria epidemic which resulted in more than 500 deaths visited the district.
- (f) Buddhists, who live in Ladakh Tehsil and parts of Kargil, are polyandrous; only one man in the family marries. The other brothers do not marry as there are not enough women to go round and they have not the means to support a wife and family.
- (g) A fair number of the residents of Skardu and Kargil Tehsils migrate to Kashmir and the plains of British India before the onset of winter every year and a number of them do not return for considerable periods.

(2) EPIDEMICS AND IMPORTANT DISEASES.

A. Plague.—(i) The Punjab was infected with plague in 1898 and the Jammu and Kashmir State in 1901. The disease was wholly confined to the Jammu Province and especially to the Jammu District, which is in close proximity to the Sialkot District of the Punjab.

A perusal of Table No. 3 will show that the number of deaths during the four decades was 40,905. The same table will show that the number of deaths caused by plague in the State for each of the four decades was 23,840 in 1901-10, 9,134 in 1911-20, 5,251 in 1921-30 and 2,680 in 1931-40. For details of the decade 1931-40 reference may be made to Table No. 4. Within a period of 30 years, the death rate has fallen from 23,840 to 2,680. This is decidedly a big drop. In fact, during 1934 the number of deaths was 1,157, in 1935 it was 7, in 1936 it was 2 and in 1937 it was 1 only. Since then no case has been reported.

From the behaviour of the disease in the past, one may be permitted to conclude, pending further investigations, that plague exhibits a long term periodicity. During the actual plague epochs, the disease exhibits no well defined periodicity but tends to recur at intervals whose minimum duration is two years and whose maximum is variable.

(ii) The problem presented by the prevention of plague offers formidable difficulties. Although there has not been a single case of plague in the Jammu District, the endemic centre for plague in the State, since 1937, it would be very unwise to assert that epidemics will not recur again. No radical change in the habits and customs of the people can be expected in the near future whilst the rehousing of the population presents unsurmountable difficulties. Above all, not only is the rat almost a domestic animal living in the closest association with man but, by reason both of its number and its highly prolific reproductive capacity, no appreciable reduction of rat infestation can be expected in spite of all the efforts that are being made to destroy this pest.

Nevertheless, much can be done by measures designed to exclude rats permanently from the habitations of man by prompt evacuation of houses upon the appearance of rat plague, by inoculation of contacts, by rat proofing of grain-stores and, last but not least, by carrying out intensive rat destruction during the "off-season" in endemic foci with the object of reducing the number of centres whence infection will be disseminated during the next plague season and thus hastening the arrival of the time when the "immunity" factor will exceed the "infection" factor, and plague, both in man and rat, will spontaneously disappear.

An anti-plague-scheme, based upon lines somewhat similar to those outlined above, was started in May 1934, the worst plague year in the decade, in the Jammu Province and was operating till June 1939, a period of five years, at a cost of about Rs. 1,69,500 to the Government.

B. Cholera.—The Kashmir Valley has always had epidemics of cholera. The disease is not endemic here but, once cases are imported into the valley, it spreads like wild fire, especially because of the innumerable waterways traversing the length and breadth of the valley. The record of the past five decades has been given in Table No. 3. The number of deaths in the decade 1891-1900 is 21,712; in 1901-1910, 17,118; in 1911-20, 18,064; in 1921-30, 19,857 and in the decade 1931-40 it has fallen to the lowest level in 50 years, *viz.*, 5,582. As in the case of plague, this indicates an achievement worthy of praise. There was an epidemic in the summer of 1935 with 4,449 deaths in the valley but the disease during this year was controlled with an efficiency that is unique in the medical history of the State. Mass anti-cholera inoculations were performed within a very short period. The total number of inoculations was 1,306,273 and this work was speedily carried out in every nook and corner of the valley. About Rs. 105,000 were spent on this work alone; the results were very satisfactory and only 4,449 deaths occurred. In the majority of cases a single dose of 1 c. c. was thought to be sufficient to confer immunity; it was not found practicable to give the customary two injections. It was a gigantic experiment in anti-cholera inoculation in the State and proved highly effective. During the last decade there were three minor epidemics, apart from the one discussed above, in 1931 (Kashmir), in 1938 (Jammu Province) and in 1938 (Kashmir); these were not of any great importance and were soon brought under control. The provision of a clean water supply has been undertaken in many parts of the State in this decade and this has proved a great help in lowering the incidence of cholera. Tables No. 3 and No. 5 give the number of deaths from cholera in this decade. The number of deaths for each year of the decade is not available.

C. Small-pox.—Kashmir Province and the Frontier Districts are the worst sufferers from this disease as is shown in Table 5. The total number of deaths for the last three decades is shown in Table 3 and is as follows:—

In 1911-20, 16,405; in 1921-30, 15,546 and in 1931-40, 13,135 deaths. There has been a decided decrease in the number of deaths during the course of the last 30 years though this decrease is small and not as satisfactory as it ought to have been, especially when the highly effective weapon of vaccination is in our hands. The reasons which might account for this are:—

- (i) A spirit of apathy and evasion towards vaccination prevailed among a section of the population. Even in places like Jammu and Srinagar where vaccination is compulsory, parents manage somehow to evade vaccination. The Health Officer, Jammu has observed that some children even upto the age of 12-15 are not vaccinated.
- (ii) The geography of the country makes vaccinating campaigns in the mofussil difficult. The area is extensive and mountainous; villages are scattered and their population spread about at considerable distances; vaccinators can only go out once or twice a year and, if a child is somehow missed in that particular year, its vaccination will be postponed till the subsequent year. To make matters worse, weather conditions are frequently adverse and the access of the vaccinators to distant and isolated places becomes more difficult on account of rain or snow. Many places are only accessible to the vaccination staff during the six months of the summer. The Frontier Districts of Ladakh and Astore, and the Tehsils Kishtwar, Ramban and Reasi suffer particularly due to adverse geographical and weather conditions.

For the decade under review, the annual death figures for each year are not available. Yet the following resume of the small-pox epidemics will give an insight into the state of affairs. The years 1931 and 1932 were uneventful. In 1933 there was an epidemic in the Kashmir Province, resulting in 237 deaths. In 1934 an epidemic broke out in the Ladakh and Gilgit Districts with 56 and 220 deaths respectively; in 1935 there was another epidemic in the Hunza and Nagar illaqs of the Gilgit Agency; 1936 saw another epidemic in the Kashmir Province with 241 deaths; in 1937 Ladakh District was very seriously affected by a virulent small-pox epidemic resulting in more than 1,000 deaths. Many of the deaths had already occurred before medical aid could come to the rescue and control the spread of the disease. Here, as has been stated above, the climatic and geographical conditions of the district were greatly responsible for

thwarting preventive efforts. In the same year a smaller epidemic broke out in the Mirpur District of the Jammu Province with 65 deaths. In 1940 an epidemic threatened the Kashmir Province, particularly Muzaffarabad District, but measures were speedily adopted and the disease was brought under control.

Table No. 8 represents the number of vaccinations, both primary and re-vaccinations, performed in the State during the decade under review. It will be seen that in 1933 primary vaccinations reached the high figure of 137,198 as compared to 74,789 in 1931 on account of the small-pox epidemic in Kashmir. In 1937 the number of vaccinations again went as high as 136,006 as this was an epidemic year. The Vaccination Department were alarmed by this epidemic and redoubled their efforts as is evident from the very large number of subsequent vaccinations, the best year being 1939 with 167,609 primary operations and 127,271 re-vaccinations. In 1940, 140,877 primary vaccinations and 58,363 re-vaccinations were performed. On the whole the progress of vaccination has been maintained and it is hoped that the small-pox scourge will dwindle to a minimum and the consequent deaths, disfigurement and blindness will be eliminated. There is no doubt that already much has been accomplished in this connection.

D. Fevers.—Table No. 5 gives the total number of deaths due to fevers of all kinds in the State for the decade 1931-40 as 209,825. The population of the Jammu District according to the 1931 Census was 336,766 and the number of deaths totals 45,466. The deaths per year in this district are as follows:—

Year.		District.	No. of deaths.
1931 Jammu	4,871
1932 „	4,943
1933 „	4,944
1934 „	6,013
1935 „	4,547
1936 „	3,840
1937 „	4,043
1938 „	4,236
1939 „	3 986
1940 „	4,043
Total ..			45,466

From a perusal of these figures, it is clear that the average number of deaths in a year comes to 13.47 per 1,000. It will be seen that the number of deaths was high in 1934 (6,013); during this year the incidence of plague was large. Reasi comes next with a total of 30,829 deaths and then follows Kathua District (30,717).

Before discussing the incidence of fevers during the decade, certain facts are to be borne in mind.

(i) As pointed out in the beginning, the death reporter (Village Chowkidar) is apt to conceal his ignorance of the actual cause of death in the simple word 'fever', in Hindustani 'Bukhar'. In malaria infected localities like Ranbirsinghpura, Kathua, Rajouri, Bhimber, Muzaffarabad, Uri, Ramnagar, Udhampur and Ramban, all endemic foci of malaria, deaths from fevers, in the majority of cases, are attributable to malaria, especially when such deaths are reported during the malarial season and also during its aftermath.

(ii) Other diseases like enteric fever, malta fever, seven day fever, influenza, tuberculosis and pneumonia, to which the relatives or the Chowkidar are unable to affix a name, will all conveniently be placed under the one single heading of "Fever".

(iii) (a) In the Kashmir Valley, where malaria is non-existent, the incidence of fevers, due to typhoid, para-typhoid and the dysentery group is fairly high on account of bad sanitary conditions.

(b) Malta fever appears to be quite common in Kashmir but it is very seldom that this disease is properly diagnosed in the valley, much less so in other parts of the State, because of want of facilities for diagnosis. This disease is often mistaken for enteric fever.

(c) Acute rheumatic fever is commonly met with in the valley, frequently resulting in a damaged heart, and this may be the reason for finding so many cases of heart disease in Kashmir. This is also included under the head of 'Fever'.

(d) Tuberculosis which is prevalent in Kashmir may be classed as 'Fever'.

(e) Typhus, outbreaks of which are frequently met with in Kashmir, is sometimes included under 'Fever'.

(iv) Acute tonsillitis, other streptococcal infections and pyrexias, where diagnosis may not be established, are usually labelled as 'Fever'.

In view of the above, it is not surprising that deaths on account of 'Fevers' are extraordinarily high. All considered, the fact remains that fevers are taking a heavy toll of life.

With regard to malaria nothing substantial has been done so far. Cases of malaria have been found in places like Skardu, Kishtwar, Padar and Bhadrawah even though the altitude is high. It is also quite common in Ramban, Udhampur, Reasi, Mirpur and Poonch. There were epidemics of malaria in the Jammu Province during the years 1932, 1935 and 1936 and in 1937 in the Kashmir Province in tehsils Muzaffarabad, Uri and Karnah. In 1938-39 malaria was again prevalent in Skardu Tehsil. But apart from these exacerbations, which come off and on, the seasonal prevalence in all the endemic foci of the disease is well known. The Government spends large sums of money annually on purchase of quinine which is freely distributed to people throughout the State. Beyond that measure, nothing else has been done which could technically be termed a preventive measure for control of malaria on a big and scientific basis. It is hoped the next decade will be more fortunate in this respect.

E. Typhoid and Para-typhoid.—Typhoid and Para-typhoid fevers commonly occur throughout the State. Attempts are on foot to give the people pure water to drink and general sanitation is being improved but in this field, although a lot has been done, much remains to be accomplished.

F. Typhus.—Typhus may conveniently be placed amongst 'fevers' and in village returns it is usually placed in that category. It is only when it appears in the form of an epidemic that it attracts notice. During the decade under review, typhus was responsible for 465 deaths out of which 457 occurred in Baramulla District, 7 in Muzaffarabad District and one in Astore; this appears to be an underestimate. In 1931 it broke out in an epidemic form in Gilgit and in 1933 in the Kashmir Valley; again in 1936 in Bandipur with 17 deaths. In 1937 it was prevalent in an epidemic form in the districts of Baramulla and Anantnag.

G. Tuberculosis of the Lungs.—Table 9, compiled from the returns of all the hospitals and dispensaries in the State, indicates the incidence of cases.

Table 5 shows that the number of deaths during the decade was 15,300. Anantnag District is by far the worst with 5,317 deaths, with an average of 531.7 deaths per year or a rate of 0.54 per 1,000. Srinagar City is badly affected with a death rate of about 1.65 per 1,000 per annum. Similarly, Udhampur and Jammu Districts are bad. On going through the records of Jammu District, it transpired that the Jammu Tehsil and Ranbirsinghpura Tehsil recorded many more deaths from tuberculosis than Samba or Akhnoor. In any case Kashmir is far worse in this respect than Jammu.

The Anti-tuberculosis Campaign was started in 1929 with the patronage extended by His Late Majesty King George V and the grant of a considerable sum of money from Their Majesties' Jubilee Fund and by the generosity of His Highness' Government. Owing to the personal interest taken by the Ruler of the State considerable progress has been made in the expansion of this work.

The Tuberculosis Department is under a specialist. There are five institutions at present—two Tuberculosis dispensaries, one each in Srinagar and in Jammu, one sanatorium at Tangmarg and two hospitals for advanced cases, one in Jammu and the other at Srinagar. In addition to the above there is also a small sanatorium at Batote.

Tangmarg Sanatorium can accommodate 100 beds and is equipped with an X-Ray plant; up-to-date treatment is being carried out there. The average annual expenditure for upkeep is between Rs. 50,000 and Rs. 60,000.

In spite of all these laudable efforts tuberculosis appears to be on the increase. This may be due either to the actual increase of the disease or to the fact that cases are being added which hitherto remained unidentified and are now coming to light with the help of better methods of diagnosis.

With an up-to-date Tuberculosis Department as a separate unit, striving hard to fight the disease, there is every prospect that the incidence of tuberculosis will now decline.

Other tubercular diseases, such as tuberculosis of the glands, bones, and joints, abdominal tuberculosis and tuberculosis of the skin are also quite common. The number of cases recorded at various dispensaries has been shown in Table 9. It will be seen that the incidence is on the increase in both provinces.

H. Pneumonias.—The figures for deaths in the decade are available only for Jammu and Srinagar Cities and for Jammu and Mirpur Districts. Jammu District shows a large number of deaths as compared with Mirpur. The incidence of cases in both provinces shows a slow rise during the last four years of the decade. The total number of deaths recorded in the Jammu District is 10,438 as is shown in Table 6.

I. Maternal Mortality.—The figures for maternal deaths in the decade are available only for Jammu and Srinagar Cities and for Jammu District; they are given in Table 6. It has been observed from the figures for the Jammu District that these deaths are not so common in that area as in the urban areas of Jammu and Srinagar. In Srinagar the average death rate is 17.6 per thousand of births. In Jammu City it is about 16.9 per 1,000. The maternal mortality rate in Jammu District is about 2 per thousand live births. This appears to be somewhat underestimated. Women welfare Centres at Jammu and Srinagar are doing very useful work in this connection. In these centres expectant mothers are advised in matters concerning mother-craft and care of babies by a Lady Doctor and a Health Visitor. The mothers and babies attend centres where ante-natal and post-natal instructions are given. The Health Visitor also visits women in their houses and instructs them. She also attends to confinements wherever necessary, free of charge. The centres also train women as 'Dais' who, after completion of their training, are examined by a board and, if declared successful, are granted a license to conduct normal cases of labour.

J. Infantile Mortality.—(Table 6). The death of infants below one year seems to be quite common in rural as well as urban areas, particularly the latter. It is note-worthy that infant mortality has steadily increased in the decade, so much so that in 1940 the figures for Srinagar City were as high as 1,358, a rate of 195.6 per thousand live births. In Jammu District the average death rate per thousand births was about 10 which appears to be an underestimate.

Frequency of pregnancy has a very direct bearing on maternal and infantile mortality. Early marriage followed by early consummation, and in consequence by early maternity, leads to high infant and maternal mortality. Even if the mother is lucky to escape death, she often in such cases suffers from chronic ill-health, invalidism and allied troubles. Repeated pregnancies occurring at very short intervals are liable to prove a source of many ailments like anæmia, tuberculosis, etc. The remedy lies in aiming at fewer and better babies, reduction in the incidence of immature maternity and general improvement in the standard of living and social conditions.

The causes of infantile mortality are infantile debility, respiratory diseases, convulsions, diarrhoea and dysentery.

K. Injuries.—The number of deaths due to injuries during the decade was 3,572. This includes accidental deaths of all kinds in the way of drowning, falls, murders, snake bites, suicides, burns etc. In rural areas drowning in wells, ponds and rivers is quite common. Snake bites are quite common in Jammu Province, especially in the districts of Jammu, Mirpur and Kathua. For instance, in the former the number of deaths from snake bites was 122. Taken as a whole, the incidence of deaths by injuries is not at all high. Table 5 gives details of all the districts.

L. Diseases of the digestive system.—(Table 9). With a view to gauge the extent of digestive diseases in the State figures for cases of dyspepsia were collected from the returns of all the dispensaries. It is interesting to note that Kashmir Province, and especially the Kashmir Valley, is responsible for a large number of such cases. It will be seen that the number of such cases who attended the hospitals was in no year less than 45,000. There was a progressive increase in numbers from the year 1932 to 1937; since the latter year the figure has gone down very slightly but it has not gone down below 50,000.

Jammu Province has a low incidence yet it is surprising to note that in 1939 the number of cases went up to above 60,000; fortunately numbers declined again to just above 41,000 in the following year.

The factors conducive to dyspepsia may be summarised as below:—

- (a) Diet.—The people in Kashmir Valley live on rice which is now largely polished and which has a low vitamin content. Raw green vegetables are sparingly taken or none at all. Fruits are seldom if ever taken. The consumption of milk and its products is an exception rather than a rule. Very small quantities of milk are taken with salted tea which is a decoction of green tea-leaves and is the universal beverage of the people.
- (b) The big rice meals to which they are accustomed lead to a dilated stomach and ultimately to dyspepsia.
- (c) Bad oral hygiene.

M. Helminthiasis.—*Ascaris* infestation is almost universal in Kashmir. This is generally due to bad sanitation and improper disposal of human excreta. Fresh night soil is used as a manure and is sold as such by the Srinagar Municipality to cultivators who use it in vegetable gardens. Tape-worm infestation is rather uncommon.

N. Ankylostomiasis.—Ankylostomiasis is often seen in Jammu Province. During the decade 1,092 stools, suspected to contain the ova of *Ankylostoma*, were examined in the Chemical Laboratory Jammu out of which 234 were positive.

In areas of the Jammu Province where there is a scarcity of water, and people are obliged to drink water from tanks and ponds, Guinea-worm is quite common.

O. Leprosy.—(Table 9). In India it has been found that there is strikingly close relationship between rainfall and humidity and Leprosy incidence. The relatively high Indian Leprosy rates of 0.5 to 1 or more per mille are met with in the wet areas of Assam, Bengal, Orissa, Eastern

Central Provinces, the Himalayas, and the very wet east coast of India, the last area extending up into Deccan and Berar. On the other hand, rates of under 0.15 per mille are met with in the very dry, hot N. W. Punjab, Rajputana, Sind and in central Madras.

The explanation of these facts, suggested by Rogers, is that dry heat is inimical to the survival of lepra bacillus outside the body whilst moist heat would favour this and also may act through the numerous insects' bites in hot humid climates producing minute lesions of the surface epithelium, affording entrance to just those layers of the dermal tissues where the Lepra bacillus flourishes best.

The incidence of leprosy in the State is as follows :—

During the years 1931 and 1938 the number of leprosy cases in Kashmir exceeded 500 per year; in 1932 it was about 800 and in the years 1933, 1936 and 1940 it exceeded 300 in each year. Obviously, the population of lepers is far more in Kashmir than in Jammu where the maximum figure was below two hundred in 1933. The figures have been taken from the annual returns of cases of leprosy who attended the dispensaries for treatment.

The accuracy of the above figures is disputable unless a proper census is taken of the number of lepers residing in the State. An investigation into the various factors which are instrumental in the spread of the disease is desirable and is going to be taken up.

(3) VENEREAL DISEASES.

Table 9 gives the number of cases of syphilis and gonorrhoea which attended the dispensaries of the State for treatment. Only a very small percentage of these cases appear to have been diagnosed by proper laboratory methods; the diagnosis in the majority of these cases is almost entirely symptomatic. The total number of Kahn's Serological Tests performed in the Chemical Laboratory Jammu during the decade is 1,554 out of which 782 were found positive for syphilis. It would appear that the incidence of gonorrhoea is comparatively much lower than that of syphilis.

The Government has three Venereal Dispensaries operating in Ramnagar Tehsil where it is feared that the incidence of Venereal diseases has been rather high. The first such dispensary was started in 1929 and work has been going on ever since. By comparing the population figures of Ramnagar Tehsil an excess of 4,410 has been found in the present Census; the actual population in 1931 was 55,666 and that for 1941 60,076. This shows that the anti-venereal treatment has proved its efficacy in this area. The dispensaries were placed in this area because of the fact that the population was believed to have declined on account of the prevalence of these diseases. An intensive campaign in the affected areas is under contemplation.

(4) DIETETICS.

As stated elsewhere Kashmir is a rice growing province and rice is thus the staple food in the valley. In the hilly areas, maize appears to be the chief article of diet. Rice is taken with green vegetables fried in small quantities of oil. Meat and eggs are very seldom taken and the same is the case with fruit and milk. In Jammu Province the staple food is barley, wheat or maize; rice is taken by a section of the population which appears to be very small. Rice is grown in Ranbir-singhpura Tehsil and there forms the main portion of the diet. It appears that the dietary standard is comparatively higher in Jammu than in Kashmir.

Proteins, fats, fruits, green vegetables and vitamins appear very sparingly in the dietary of the people of the State. It is only the well-to-do, a very small percentage of the population, who can afford, perhaps, to take a balanced diet. The poor cannot for want of means.

To get an insight into the state of nutrition of the people, figures have been collected for dental caries from the returns of the dispensaries. There is a steady rise in the number of cases of dental caries every year.

Rickets and Osteomalacia (in women) are often met within the Kashmir Valley. The frequency with which Caesarian sections are performed on pregnant women in Kashmir is well known; this is due to rickety pelvis and osteomalacia. It is indirectly responsible for the increase in the number of maternal and infantile deaths.

Pellagra is also met with in certain parts of Kashmir. True Beri Beri does not appear to exist in Kashmir although milled and polished rice is the staple food in urban areas. Yet it is a fact that manifestations of partial avitaminosis (Vitamin B) are often observed. The years 1933 and 1940 show quite a high incidence of a scurvy like condition. During winter in Kashmir fruits and vegetables containing vitamin are unobtainable.

(5) GENERAL SANITATION.

It is safe to assert that sanitation has greatly improved during this decade as compared to former decades. Apart from Jammu and Srinagar Municipalities, there are now 25 Town Area Committees; they are located at all District headquarters, important Tehsil headquarters and certain hill stations. This has improved the sanitation of these places. Pure water supply, paving of lanes and streets, laying of proper drains, general cleanliness of the area, improvement of housing, proper disposal of refuse and excreta and sanitary control of articles of food, are the main headings under which improvements have been effected. The details of sanitary work done in the rural areas by the Rural Development Department during the decade have been given in Table 7.

(6) BIRTH CONTROL.

Despite the illiteracy and ignorance of the masses in the State, it may be permissible to observe that families with a high fertility rate do resent the increased number of children of their families especially when means are lacking to feed so many mouths. Mothers particularly in such cases often seek advice to help them to postpone the arrival of another baby for a considerable period. To achieve this they try all sorts of quack remedies. Prolonged lactation, which in a certain number of cases does help, is often resorted to. A belief, although unfounded, that there may be a "safe period" when the chances of conception are negligible, does exist in the minds of these people.

At the same time educated people do often resort to methods of birth control which, practised in a half hearted and unscientific manner, are often associated with failure. It is, therefore, quite correct to say that birth control methods, which could seriously affect the population figures, are not practised by the people in this country.

(7) CONCLUSIONS.

(i) The manner in which vital statistics are collected, if not ideal, is not wholly unsatisfactory.

(ii) Births show a clear preponderance over deaths in the decade despite the various epidemics, diseases and several adverse economic factors.

(iii) The decade has been, on the whole, exceptionally fortunate regarding epidemics. A comparison with past decades reveals a great decline in the number of deaths from plague and cholera and to a smaller extent from small-pox. In fact, plague has been non-existent since 1937. The control of the cholera epidemic in 1935 was a unique instance of what preventive medicine can accomplish. Much has been done to decrease small-pox. Efforts to overcome diseases in general have gone on steadily and have met with a considerable amount of success.

(iv) Malaria is still prevalent and epidemics of this disease occur frequently. A survey has been recently made by experts and preventive measures are being worked out.

(v) Tuberculosis, although still on the increase, is being tackled with ever increasing zeal. With an improvement in the social and economic conditions of the people the present efforts will bring greater success in the control of this disease.

(vi) Infantile mortality and maternal deaths are still on the increase. The state of affairs might have been worse but for the preventive measures adopted.

(vii) Leprosy is still rife in certain areas. A survey is going to be undertaken and preventive measures worked out.

(viii) The venereal dispensaries have done very useful work in fighting the venereal diseases. A campaign on a large scale against venereal diseases in affected areas is under contemplation.

(ix) The question of nutrition and dietetics is not one which can easily be solved unless the economic condition of the population as a whole is improved. The public should be educated in a manner that will bring home to them the principles and advantages of a balanced diet and a hygienic mode of living. The starting of a school of medical services is advised. A nutrition survey of the State is being contemplated.

(x) Much has been achieved in the direction of improvement of sanitation in general and the rate at which both rural and urban areas are progressing in this direction augurs well for the future of this country.

(xi) It is not out of place to mention that the construction of two new big modern hospitals, one in Jammu and the other in Srinagar is a matter of great satisfaction; in the near future they will serve as important centres of healing for the suffering humanity of the State.

Census of India 1941

VOL. XXII

JAMMU AND KASHMIR

Part II

TABLES.

Title _____

Author 

Accession No. _____

Call No. 5

[illegible]

IMPERIAL TABLE I AND ITS SUBSIDIARIES.

Area, Houses and Population.

NOTES.

1. The area of the State and its districts remains the same as in 1931 except that the Gilgit District shown in 1931 with an area of 3112 sq. miles has been split into the two districts Astore and Gilgit (Leased Area); the joint area of these is the same as that shown for Gilgit in 1931.

2. (a) The districts Baramulla and Anantnag correspond to the districts designated "Baramulla District (including Langet) or Kashmir North" and "Srinagar District (including City) or Kashmir South" respectively in the 1931 tables. There is no change in the area of either.

(b) The Jammu District includes Jammy City and the Anantnag District includes Srinagar City.

(c) In 1931 the district now designated Gilgit Agency was shown as 'Frontier Illaqa'; there is no change in boundaries or area.

3. The Natural Divisions given in Subsidiary Table III and elsewhere in the tables comprise exactly the same areas as in 1931; the administrative units forming each such division are given in Subsidiary Table IV.

4. The population of the three villages of Karloop, Raipur and Kothar, together constituting the Karloop Jagir which is under the administration of the Poonch Jagir, was included with the population of the Jammu District in 1921 and 1931. On this occasion the population of the villages Karloop and Raipur, together totalling 876, has been included in the population of the Jammu Tehsil of the Jammu District and of village Kothar, totalling 992, in the Ramnagar Tehsil of the Udhampur District because the villages mentioned are actually located in the Tehsils and districts named.

5. The population of cantonments, shown separately in Imperial Tables III, IV and V, is included in the districts within which they are situated. Included in the figures for the Jammu Cantonment are those members of the State forces who at the time of the census were serving overseas; they totalled 320. Troops belonging to the State Military Forces serving in British India at the time of the census were enumerated in the areas in which they were stationed at the time of the census and are not included in the figures for Jammu and Kashmir. They numbered 1520.

6. The population of tehsils, which together make up the population of the districts shown in this table, is given separately in State Table I which follows Imperial Table XVI. The population of the villages in each tehsil is given separately in Part III of the report the title of which is 'Village Tables and Housing Statistics'. Part III has been published for local issue only.

7. For the purpose of the census in British India a 'Town' means every municipality, cantonment or continuous collection of houses which has urban characteristics or which is rich in historic association or constitutes an important trade centre with a population of more than 5000 persons. In these tables we have followed past practice in the State and have shown a number of places as towns with a population of less than 5000 and in some cases lacking urban characteristics. The places so included, which do not comply with the usual standard, have local historic associations or importance. There is only one change in the list of towns compared with 1931. Gilgit Cantonment has ceased to exist. Nowshera Cantonment has been created since 1931.

8. A 'village' for the purpose of these tables is a well recognised area with definite boundaries for revenue assessment purposes. Hamlets have not been treated as separate villages; they are included with the village within the area of which they are situated. The number of villages shown in the table is 8740 against 8903 shown in the corresponding table for 1931. Some villages shown in

1931 have ceased to exist altogether ; others shown separately in 1931 have ceased to exist as separate villages. A ' House ' for the purpose of these tables is any building, boat, tent, cave etc., in which any person or persons were found at the time of the census to reside alone or with others as a separate communal unit.

10. On the basis of the classification of towns adopted for this table and in Imperial Tables III, IV and V the urban/rural ratio is 11.49 : 100 but if the standard definition be adopted *viz.*, places with a population exceeding 5000, the ratio works out at 8.82 : 100.

11. The figures for rainfall given in column 8 of Subsidiary Table I are for 1940 and represent the averages calculated from the figures available for the different stations in each district as supplied by the Meteorological Reporter to His Highness' Government. In a country with such diverse conditions in parts of every district such figures can at best only be approximate for any particular district as a whole.

12. The figures given in Subsidiary Table I are all based on data supplied by the Revenue Department of His Highness' Government except in the case of density and rainfall.

13. The figures given in Subsidiary I for ' Net cultivated ' area represent the gross cultivated area less the double cropped area ; fallows are not included. The ' gross cultivated ' area is represented by the ' net cultivated ' area plus the double cropped area. For the purpose of this table ' cultivable area ' is the area in any district deemed to be fit and available for cultivation.

14. Column 21 of Subsidiary I represents the balance of the area under crops not covered by columns 9 to 20. ' Kharaaba ' means the area under crops not maturing or harvested. This column also covers crops for which details are lacking or not covered by column 14.

15. (a) For Subsidiary II the tehsil was taken as the unit. The density per square mile having been calculated for each tehsil in each ' Natural Division ', the tehsils were classified according to the groups shown in the table and the collective area in square miles and the collective population (000 omitted) of each density group calculated.

The percentage figures show the ratio that the area and population to which they refer bear to the total area and population respectively of each Natural Division.

(b) There are no tehsils in the State with a density exceeding 750 persons per square mile.

16. (a) Subsidiary III shows the number of persons per 1000 houses and the number of houses per 100 square miles whereas the corresponding subsidiary table in 1931 shows the number of persons per house and the number of houses per square mile. The figures relating to previous censuses have been adjusted accordingly.

(b) The figures for 1901 are incomplete. Where blanks are shown it indicates that correct figures are not available.

17. The figures for 1901 in Subsidiary IV are lacking to the extent shown by the blanks.

18. Tabulation in British India and in many states was restricted owing to the war with the result that Imperial Table VI has not been produced for such areas. In these circumstances the proportion of the sexes in Subsidiary IV cannot be given for the ' natural ' population.

IMPERIAL TABLE II AND ITS SUBSIDIARIES

Variation in Population during Fifty Years

1. The figures for this table for periods previous to 1941 have been taken from the corresponding table published with the 1931 report. From 1911 onwards all the figures required are available. The figures for 1891 and 1901 are missing for many districts and there is no alternative but to leave the relative spaces blank.

2. For the purpose of this table the populations of Astore and Gilgit (Leased Area) have been added together for comparison with the old Gilgit District, since the population figures for these districts separately are not available for censuses previous to 1941.

3. The figures shown for Udhampur for 1891 and 1901 represent the population of the Bhadrawah Jagir only. The Udhampur District was reconstituted during the decade 1901-1910 and the figures shown for 1911 are the earliest correct figures for the district available. The figures for 1891 and 1901 referred to might well have been omitted but as they were shown in 1931 it was thought better to show them again and explain to what area they relate.

4. Where the figures for 1901 are not available for the main table they are naturally lacking for Subsidiary (i) too and the relative spaces have had to be left blank here also.

5. The percentage variations shown in Subsidiary (I) all represent increases except in the few cases where a minus sign is given.

6. Natural Divisions I and II together constitute the Jammu Province—the figures for which are given below :—

PERCENTAGE VARIATION

1931 to 1941	1921 to 1931	1911 to 1921	1901 to 1911	1901 to 1941
10.8	9.0	2.7	5.3	30.2

DENSITY

1941	1931	1921	1911	1901
160	144	135	128	122

7. The figures for density in Astore and Gilgit (Leased Area) are given separately for 1941 ; the figures for periods previous to this are for the two combined, *i. e.*, for the old Gilgit District.

8. In Subsidiary (ii) entries against Astore have only been made in columns 2, 3 and 6 ; there are no Vital Statistics returns available for this area previous to the decade 1931-41. Columns 4, 5 and 7 have been left blank because the population figures are not available for Astore separately previous to 1941.

9. (a) The figures in columns 4 and 5 of Subsidiary II were calculated after excluding the births and deaths in Astore District and after exclusion of the 1931 population of the districts Astore, Gilgit (Leased Area) and Gilgit Agency.

(b) The total increase of population (254542) shown in column 6 includes the figures for Astore but the total shown in column 7 (355772) excludes the population of Astore, Gilgit (Leased Area) and Gilgit Agency.

10. (a) It is usual to show the figures given in columns 6 and 7 with 000 omitted but since our figures are small it was decided to give the figures fully.

(b) All variations shown in columns 6 and 7 represent increases except the one case where a minus sign has been given.

IMPERIAL TABLE III AND ITS SUBSIDIARIES

Towns and Villages Classified by Population

1. The definition of a town and of a village for census purposes has been given in the notes to Table I.

2. Variations in the number of towns and villages as compared with 1931 have been referred to in the notes to Table I.

3. Some places classified as towns consist of two or more villages. For the purposes of this table such villages have been taken together as one unit which has been classified according to the aggregate population of the several villages constituting the town. For instance, the two villages Baharyan and Udhampur together constitute Udhampur Town; in this table they are treated as one town and not as two separate villages.

4. The 'Floating population' given in column 22 refers to the population living in boats which has not been included in the population of any village; all other 'floating population' has been included in the total of the village within the limits of which it was enumerated. For instance, under columns 20, 21, and 22 the entries against Anantnag District are 201278 and 9515. Columns 20 and 21 refer to Srinagar City the full population of which is 207787 consisting of 201278 persons living in houses and 6509 persons living in boats. The remaining 3006 persons out of 9515 shown in column 22 are those living in boats within the Anantnag District but outside the limits of Srinagar City. Full details have been given for local information in Part III of the report—Village Tables.

5. Subsidiary I is similar to the table produced on page 90 of Part I of the 1931 report except for a minor difference. In 1931 the figures were given by Natural Divisions and Districts; on this occasion we give them by Natural Divisions only.

IMPERIAL TABLE IV AND ITS SUBSIDIARIES
Towns Classified by Population with Variations since 1891

NOTES

1. There are 39 places classed as towns which is the same as in 1931. There is one change. Gilgit Cantonment has ceased to exist. Nowshera Cantonment was created during the decade 1931-40.

2. There was no town in class II in 1931; on this occasion there is no town in class III; Jammu City has gone up into class II. Baramulla is now in class IV and Jammu Cantonment in class V; in 1931 these two places were in class V and VI respectively.

3. (a) Jammu City shows a large increase in population; this is partly due to increased trade and development and partly to the extension of the municipal boundaries. The area of the city which was one square mile in 1931 has been shown as two square miles on this occasion *vide* State Table I. The Palace area, which is on the borders of the municipality, was included with the city for census purposes.

(b) Baramulla town has been extended by bringing adjacent villages within the limits of the Town Area.

(c) The figures in brackets denote the number of towns in each class.

4. (a) Totals have been given for each class; class totals do not appear in the corresponding table for 1931.

(b) Where figures are not available the relative spaces have been left blank throughout the table.

5. (a) As there is no town in class III the spaces pertaining to 1941 in Subsidiary (i) have been left blank for this class.

(b) As Jammu City is shown in class II for the first time the spaces pertaining to decades previous to 1931-41 have been left blank.

6. The standard definition of a city for census purposes is a town with a population of not less than 100000. Srinagar is the only place in the State which satisfies this definition. Jammu has been included in Subsidiary (ii) owing to its historic and political importance. This is in accordance with past procedure.

7. The figures in column 3 denote density per square mile and those in column 4 the number of persons born outside State territories.

8. The standard form for Subsidiary (ii) requires percentage variations to be shown for each decade from 1881-91 onwards. The figures for 1881-91 are not available; consequently the table gives variations from 1891 onwards and for 1891-41.

IMPERIAL TABLE V AND ITS SUBSIDIARIES

Towns arranged Territorially with Population by Communities

NOTES

1. The districts Chenani Jagir, Astore and Gilgit Agency do not appear in this table as they contain no towns.

2. Details of the communities shown will be found in the notes to Imperial Table XIII.

3. The details of 'Others' shown in columns 17 and 18 are as follows —

						Males	Females
Total	1112	1062
Anglo-Indians	3	3
Other Non-Indian Christians	144	154
Parsees	9	7
Buddhists	951	889
Jews	2	7
Others	3	2

4. The detail of the civil and military population enumerated in cantonments is given below :—

		POPULATION					
Cantonments.		Military			Civil		
		P	M	F	P	M	F
Jammu Cantonment	..	3925	3925	..	4543	2627	1916
Badami Bagh Cantonment	..	1192	1192	..	617	309	308
Nowshera Cantonment	..	511	511	..	101	95	6
Total	..	5628	5628	..	5261	3031	2230

5. In 1931, *vide* para. 65 of the 1931 Census Report—Part I, there were ten towns in the Natural Divisions designated Sub-montane and Outer Hills respectively, fifteen in the Jhelum Valley and four in the Indus Valley. On this occasion there are eleven places shown as towns in the Sub-montane Division (Nowshera Cantonment having been included) and three in the Indus Valley (Gilgit Cantonment having ceased to exist). There is no change in the Jhelum Valley and Indus Valley Divisions.

6. The only places in the State having true urban characteristics are the two cities—Jammu and Srinagar. Jammu Cantonment, Mirpur, Poonch, Sopur, Baramulla and Anantnag have semi-urban characteristics.

7. Subsidiary (i) corresponds to the table shown on page 91 of the 1931 Census Report—Part I except that on this occasion we give the figures for Natural Divisions only. Column 8—Others—covers the communities of which details have been given in note 3 above.

TABLE VI AND ITS SUBSIDIARIES

Birthplace

NOTES

1. This table has been produced in two parts. Part I gives details by districts ; Part II gives the details separately for the two cities—Jammu and Srinagar.

2. In section B of the table (Countries in Asia beyond India) under sub-section (ii), (Outside British Dominions) against the heading ELSEWHERE, the entry is 266. The detail of this entry is as follows :—

				Persons	Males	Females
Total ..				266	135	131
Badakhshan	2	1	1
Iraq	27	7	20
Kashgar	2	2	
Persia	1	1	
Syria	1		1
Samarkand	1	1	
Tibet	3	2	1
Turkey	1		1
Turkistan	12	6	6
Wakkan	202	107	95
Yarkand	14	8	6

3. When this table was being compiled the fact that Bihar and Orissa are now separate provinces was overlooked and the figures were amalgamated under one head as in 1931. When the error was detected it was not considered necessary to extract the figures separately in view of the small number involved (18 persons) and the fact that the two provinces were classed together in 1931. Similarly, the figures for Deccan States, Gujrat States and the States of the Western India Agency have not been given separately but classed together under the comprehensive heading 'Bombay States' as in 1931. Since the total number of persons involved in this case is only 3 the failure to give the figures separately is of no importance.

4. The table shows that out of a total population of 4021616 persons, 3882028 or 96.53 per cent. were born in the district where they were enumerated, 75069 or 1.87 per cent. were born elsewhere in the State and 64519 or 1.60 per cent. were born outside the State.

5. (a) Subsidiary (i) shows that the figures for immigrants at this census are 64519 against 64196 in 1931 ; the increase is negligible.

(b) The correct figures for emigrants cannot be given because tabulation throughout British India, and in the majority of the States, was restricted owing to the war. To arrive at the 'natural population' given in column 5 we have adopted for 1941 the figures for emigrants in 1931. This is in accordance with a suggestion received from the Census Commissioner for India. There is no reason to believe this figure is far wide of the mark ; the true figures for 1941 probably exceed slightly those for 1931.

(c) The corresponding table on page 72 of the 1931 Report—Part I gives the figures by natural divisions and districts ; on this occasion the figures have been given for the State as a whole only.

(d) It is usual to show such tables with 000 omitted, we have shown actuals.

(e) The percentage variation at 10.20 compares with 10 shown in 1931 but as the figures for emigrants for 1931 have been adopted for 1941 the comparison is of little value.

6. (a) Subsidiary (ii) has been prepared by districts. The corresponding table on page 111 of the 1931 Report—Part I gives the figures by natural divisions as well as districts.

(b) The totals shown for the whole State in columns 2, 3 and 4 represent the sum of the totals shown for Jammu Province, Kashmir Province and Frontier Districts in columns 5, 6 and 7 as well as the totals in columns 2, 3 and 4.

(c) The corresponding table on page 111 of the 1931 Report—Part I cannot be compared fully with the table produced on this occasion. In the 1931 table the district components do not in some cases correctly add up to agree with the provincial and natural division totals.

7. (a) The standard form for Subsidiary (iii) is designed to show the distribution of emigrants from the State to places throughout India.

Since tabulation in British India was restricted, *vide* note 5 (b) above, it is not possible to produce this subsidiary at all because the figures from which it must be prepared can not be obtained from most of the Provinces and States of India owing to the restricted tabulation in those areas.

(b) The numbers of persons born and enumerated in the State are given in columns 2, 3 and 4 of the main table against item 1; they are 3957097, 2103941 and 1853156 for persons, males and females respectively.

(c) The great majority of emigrants from the State go to the Punjab and the North Western Frontier Province as labourers. This migration is almost entirely seasonal. The movement outwards commences in the late autumn and back to the State in the early spring. A considerable number of men from the Jammu Province are recruited for the army in British India; this movement is of a semi-permanent nature. Men in fairly large numbers leave the Poonch and Mirpur Districts in particular in search of employment as domestic servants, seamen and traders. This movement also is of a semi-permanent nature.

8. (a) The standard form for Subsidiary (iv) is designed to show the variations in both immigration and emigration between 1931 and 1941 and the difference between immigration and emigration in 1931 and 1941. But as tabulation in British India and in most of the States was restricted it is impossible to show the figures for emigrants. To have repeated the 1931 figures for emigrants as done in the case of Subsidiary (i) would have been useless. We have therefore given the figures for immigrants only and omitted columns 5 to 9 of the standard form.

(b) The names of Provinces and States from which there are no immigrants have been omitted.

(c) In the corresponding table on page 113 of the 1931 Report—Part I Burma was shown. As Burma is no longer a part of India it has been omitted from this subsidiary table on this occasion.

(d) Variations shown represent an increase unless a minus sign has been given.

(e) It will be noticed that the great majority of immigrants to the State come from the adjacent Punjab and North Western Frontier Provinces.

9. A 1/50 random sample was extracted from the record and tabulated for comparison with the full table. The figures have been given for the whole State and not by districts as the latter would require too much space. The sample table comes immediately after Subsidiary (iv). The population of Gilgit Agency is not included in the sample because the record for that area, totalling 76526 slips, was tabulated in the North Western Frontier Province and was not available. The population of the State less Gilgit Agency is 3945090. The sample slips totalled 78901; multiplied by 50 this gives a total of 3945050 or an 'error' of 40.

The sample is reasonably representative for large totals but not for heads against which the entries are small. The sample table has been produced only for the purpose of comparison with actuals and for the information of those interested in the value of sampling for such purposes.

TABLE VII AND ITS SUBSIDIARIES

Age and Civil Condition

NOTES

1. The title of the table is slightly different to the corresponding table in 1931; the word 'sex' has been omitted as all important tables give sex details.

2. The table is in four parts; the corresponding table in 1931 was in three parts. The present table gives the figures for the whole State and for Provinces separately; in 1931 these were both included in the first part.

3. (i) In Part I the figures are given for the whole State separately for the communities shown in Table XIII.

(ii) Part II presents the details by provinces for the four main communities only; all other communities are shown under 'Others'.

(iii) Part III gives the same details as Part II but by districts instead of provinces.

(iv) Part IV gives details for the two cities separately in two parts:—

(a) for the total population of each city and

(b) for all communities as shown in Table XIII.

4. The figures for Gilgit Agency were not made available for age groups by communities. The whole population of the Gilgit Agency has, therefore, been treated as Muslim. There are only 99 persons belonging to other communities. The total Muslims shown in this table will naturally exceed those shown in Table XIII by 99. This does not of course affect the total population but it affects the other communities concerned to the extent of the numbers involved; they are Hindus 74, Sikhs 21 and Christians 4, *vide* the detail for Gilgit Agency given in Table XIII.

5. The figures shown under 'Widowed' include those shown as 'Divorced' in the record. Hindus shown by enumerators as divorced were treated as married persons temporarily separated or deserted. The divorced persons included belong to the Muslim, Christian and Buddhist communities. The detail of these is as follows:—

				Persons	Males	Females
Total Population	13987	5742	8245
Muslim	13560	5641	7919
Christian	5	2	3
Buddhist	422	99	323

6. Scheduled Castes are included with Hindus. 'Others' in Part I refer to those similarly shown in Table XIII.

7. To facilitate comparison between the numbers in the various age groups in 1931 and 1941 respectively a table has been prepared which is given below :—

Comparative Age Table for Total Population

Age.	Persons		Males		Females	
	1941	1931	1941	1931	1941	1931

8. Certain features of the comparative table given above may be noted :—

(i) In the group 0-5 there is a decrease in 1941; for the age 0-1 this exceeds 28 per cent. The decrease is also large in groups 1-2 and 2-3 but in groups 3-4 and 4-5 an increase is shown and this increase continues for all higher age groups.

(ii) In 1931 there was no age group in which females exceeded males. At this census the females in group 3-4 out-number males by 394. The numbers of females per 1000 in this group for the three census years 1921, 1931 and 1941 are 983, 966 and 1006 respectively. In all other groups males exceed females.

(iii) The age group 0-5 shows a decrease of nearly 8 per cent. compared with 1931 but the group 5-10 shows an increase of over 25 per cent. The latter is the highest increase in any age group at this census; in 1931 the highest increase was in group 0-5.

(iv) The table for 1941 shows a more regular tendency than in 1931. In 1931 the group 0-5 contained the largest number for any one group; the numbers in the following 5 year groups decreased until the group 20-25 which showed a sudden rise; thereafter all groups up to 70 showed a steady decrease in numbers. In 1941 from and including the group 5-10 the decrease is regular.

(v) In 1931 the total for all ages in groups 35-40 and above was 840931; in 1941 it was 976802 an increase of 135871 or 13.7 per cent. against 10.3 per cent. for all ages. This indicates a very definite tendency. The increase in all the groups within this range is marked except in the age group 60-65.

9. Some details may be noted concerning the percentage increase in the number of females in the different age groups in 1931 and in 1941.

(i) Age-group 5-10 29 per cent. increase in 1941 against a decrease of 9 per cent. in 1931.

- (ii) Age-group 10-15 15 per cent. increase in 1941 against 18 per cent. increase in 1931.
- (iii) Age-group 15-20 12 per cent. increase in 1941 against 18 per cent. increase in 1931.

10. (i) At this census 2026892 of the total population are included in the age groups 15-50 out of 4021616 against 1834736 out of 3646243 in 1931. The percentage works out at 50.4 for 1941 and 50.3 for 1931.

A country is said to be progressive if 40 per cent. of its population is included in the age group 0-15, stationary if the percentage in this group is not more than 33 per cent. and regressive if it is not more than 20 per cent. In this table the number included in the group 0-15 is 1611688 which is a fraction over 40 per cent. of the total population.

(ii) In the case of Hindus the number in age group 0-15 is 37 per cent., for Muslims it is over 40 per cent. and for Sikhs it is 44.7 per cent. of the populations of their respective communities. In the case of the Buddhists the number constitutes 30.5 per cent. of the total of the community.

II. Subsidiary (i) :—

(i) The figures for years previous to 1941 have been taken from the 1931 report. Where figures are not available spaces have been left blank.

(ii) The figures are for Natural Divisions; they have been given separately for Jammu Province to facilitate comparison with 1931.

(iii) The mean ages given in this table and in Subsidiary (ii) have been calculated by the same method as in 1931. The table below gives the basis of our calculations :—

Age groups (Class-intervals).			Mid-values of the class intervals.	Persons (frequency distribution).	Deviation from arbitrary value.	Products (3 × 4).
1			2	3	4	5
0-5	2	1263	— 9	— 11367
5-10	7	1449	— 8	— 11592
10-15	12	1236	— 7	— 8652
15-20	17	1006	— 6	— 6036
20-25	22	899	— 5	— 4495
25-30	27	823	— 4	— 3292
30-35	32	760	— 3	— 2280
35-40	37	638	— 2	— 1276
40-45	42	476	— 1	— 476
<hr/>			<hr/>			
45-50	47	420	0	— 49466
<hr/>			<hr/>			
50-55	52	307	1	307
55-60	57	258	2	516
60-65	62	175	3	525

70-75	72	31	5	150
75-80	77	30	6	180
80-85	82	30	7	210
85-90	87	30	8	240
90-95	92	30	9	270
95-100	97	30	10	300
<hr/>			<hr/>			
TOTAL				10000		3134
— 49466						
3134			— 46332			
<hr/>			<hr/>			
— 46332			10000	— 4.6332		

multiplying —4.6332 by 5 we get—23.1660 i.e., —23.17 which when subtracted from 47 (the mid-year of the middle age group 45-50) gives 23.83 as the mean age.

12. **Subsidiary (ii) :—**

The table deals with the four main communities only as in the corresponding table for 1931. There is a decrease in the mean age of Hindu females and of Sikhs, both males and females, in 1941 as compared with 1931; in all other cases the mean age shows an increase.

13. **Subsidiary (iii) :—**

(i) The table has been prepared by province and community. The figures for periods previous to 1941 have been taken from subsidiary V (a) to Imperial Table VII for 1931.

(ii) It will be observed that there is a decrease of children per 100 of persons aged 15-40 in the case of Muslims and Buddhists as compared with 1931. There is a decrease in children per 100 married females aged 15-40 in the case of Hindus only.

(iii) There are no entries for Buddhists under the Kashmir Province because only ten Buddhists were enumerated in this area and they were all over ten years of age.

(iv) In that part of the table showing persons over 60 per 100 of the population aged 15-40, it will be seen that the figures for Hindus and Buddhists exceed considerably those for Muslims and Sikhs. In the last part of the table it will be noticed that whilst the figures for married females aged 15-40 per 100 females of all ages are the same in 1941 as in 1931 there is a fall in the ratio in the case of Muslims and Buddhists.

14. **Subsidiary (iv) :—**

(i) This table has been prepared by provinces as in 1931 to facilitate comparison of figures.

(ii) All variations shown represent an increase except where a minus sign has been given.

(iii) The increase variation for all ages shows a fall as compared with 1931 but figures for the latter were affected by the phenomenal increase of the population for every age group in the Frontier Districts for which Gilgit [now divided into Astore and Gilgit (Leased Area)] and Frontier Illaqa (Gilgit Agency) were responsible—Ladakh showed no such phenomenal increase in 1931. The increase variation for the Frontier Districts has fallen back to what may be considered a normal figure. The phenomenal increase variation for 'Gilgit' and 'Frontier Illaqa' (Gilgit Agency) in 1931 must be attributed to special factors—probably defective enumeration in 1921.

15. **Subsidiary (v) :—**

(i) This table constitutes a new feature in the census reports for this State.

(ii) The area chosen for the selection of one lac enumeration slips of each sex for the purposes of this table was Srinagar City. As there were not quite enough females in Srinagar for the purpose the remaining 5000 slips were taken from Khas Tehsil (Anantnag District) in which tehsil Srinagar is situated.

(iii) The tendency for persons to give ages ending with 0 or 5 is brought out very clearly in this table from age 20 onwards. This is noticeable at every census in every province and state throughout India.

Another peculiar feature brought out by this table is that after the age 20 the odd numbers 1, 3, 7 and 9 are looked upon with least favour by those being censused; this is not so in every case but it is so in sufficient cases to be noticeable. Thirty is the age common to the largest number of persons, both male and female.

16. **Subsidiary VI :—**

(i) In the age group 3-4 for the total population the females outnumber the males; this was not the case for any age group in 1931.

(ii) In the important age group 0-30 Hindu females per 1000 males show an increase from 919 in 1931 to 936 in 1941.

(iii) For All-ages Hindus and Muslims have shown an improved proportion of females but both are still below the proportion for Sikhs and Buddhists; the latter are the same as in 1931 whilst the proportion in the case of Sikhs has fallen from 923 to 895. The proportion for Sikhs in the important group 0-30 has fallen to 947 from 970 in 1931.

17. **Subsidiary VII :—**

The table has been prepared for provinces.

18. **Subsidiary VIII :—**

The age groups and communities are the same as in 1931. The totals under each category have been given for both males and females in addition to the figures under each age group.

19. **Subsidiary IX :—**

(i) The table has been prepared by provinces instead of natural divisions to facilitate comparison with 1931.

(ii) It is to be remembered, as stated in note 5 above, that those Hindus shown as divorced, both male and female, were not treated as such for the purposes of Table VII and its subsidiaries.

(iii) The Infant Marriage Act in force in the State prohibits the marriage of boys below the age of 18 and of girls below the age of 14. It is probable that this law is frequently broken secretly in a number of cases. As a result some under age persons may have been shown as unmarried when they were in fact married or their ages may have been advanced to an age over the permissible marriage age.

20. **Subsidiary X :—**

(i) This table has been prepared by provinces to facilitate comparison with 1931.

(ii) As the few Buddhists recorded in the Kashmir Province were all males no entries appear in this table against Buddhists under 'Kashmir Province'.

21. **Fertility Tables :—**

(i) For the purpose of these tables Jammu District (excluding Jammu City) and Ladakh District were selected for rural areas and Jammu City was taken as the Urban area. The communities selected were Hindu, Muslim and Sikh for Jammu District and Jammu City and Muslim and Buddhist for Ladakh District. The selection was influenced by the fact that the three main communities are fairly represented in the Jammu District and in Jammu City and are living under the same conditions. To include the fourth main community, Buddhists, Ladakh was selected so that comparison could be made between the Muslim and Buddhist women of that area. It is important to note that polyandry is practised by the Buddhists and polygamy to some extent by the Muslims. As true urban conditions only obtain in the State in the two cities—Jammu and Srinagar—it was suitable to select one of these. As the communities are more evenly represented in Jammu that city was chosen in preference to Srinagar for the purposes of our tables.

(ii) The tables are based on questions 6, 7 and 8 of the census questionnaire—age, number of children born to a married woman and the number surviving and a mother's age at the time of the birth of her first child.

(iii) It must be stated that questions 7 and 8 were badly answered and that the tables cannot be regarded as representative of the true position; at best they are an indication of conditions. They will serve for comparison if similar figures are produced at a future date. The tables produced are

numbered I, II and V ; this is because the full set of tables suggested by the Census Commissioner for India ran from I to V. The material for tables III and IV was so defective as not to be worth presentation.

(iv) Averages have been shown to two decimal places and the proportion to survivors per 1000 born to the nearest whole number.

(v) The Census Commissioner for India expressed the wish that information should be collected on other aspects of the subject not covered by the census questionnaire but this did not prove feasible. It seems quite clear that, in this State at any rate, little reliable data connected with fertility problems will be collected except through the agency of a special investigation carried out under the control of Medical Officers by trained investigators—preferably women.

(vi) The tables produced for Jammu District show that a fair proportion of women are married at the age of 14 and below in all three communities, that children are born to Hindu and Muslim mothers from the age of 12, and in the case of Sikhs from the age of 16, and that the smaller the number of children in any family the larger the percentage of survivors.

According to the tables for Jammu District and City 40 is the highest age of a mother at the time of the birth of her first child.

(vii) There is no marked difference between the figures for the rural and urban areas of the Jammu District.

(viii) Table II for the Ladakh District shows a number of women to have been well over 40 at the time of the birth of the first child ; the highest age given is 58. This indicates the unreliable nature of the information collected on this subject by means of the census.

22. **One-in-fifty Sample :—**

(i) The table has been produced to illustrate the difference in the results obtained from tabulation of the whole record and those from a 1/50 sample. The table will be found immediately after the Fertility tables at the end of the subsidiaries to Table VII.

(ii) The figures are given for the whole State for the main age groups and for the main communities for the age groups 0-5, 5-30 and 30 and over only.

(iii) The smaller the unit the less favourable the comparison with the full table. This is to be expected.

(iv) The sample does not include the population of the Gilgit Agency as the record for that district was not sorted and tabulated in the State.

NOTE —P stands for Persons, M for Males and F for Females.

TABLE VIII
Means of Livelihood

NOTES

1. This table corresponds to Table X of the 1931 report. As the Census Commissioner for India anticipated in the compilation instructions, this table proved the most difficult to compile. The questions on which it is based also proved beyond the capabilities of the majority of our enumerators and the answers recorded were very defective. The results are most unsatisfactory and the table must be declared useless for statistical purposes. For these reasons Part II of the table giving the details by districts has not been produced ; it would be waste of paper and printing to do so.

2. The table is based on the answers to census questions 9, 10 and 14 which read as follows :—

- (9) Are you wholly or partly dependent on any one else ?
- (10) If so, give means of livelihood of persons on whom dependent.
- (14) Give your means of livelihood in order of importance.

At the 1931 Census the relative questions 9, 10 and 11 were to the following effect :—

- (9) Enter clearly whether the person enumerated is an earner or dependent.
- (10) Enter the principal occupation of persons engaged in trade or in any profession either directly or through their servants.
- (11) Enter in this column any occupation which the person enumerated follows at any time of the year in addition to his principal occupation.

3. In 1931 the total population was divided into earners, working dependents and non-working dependents. The figures recorded were :—

Total Population	Earners		Working dependents		Non-working dependents	
	M	F	M	F	M	F
3646243	752104	56045	221997	895159	964237	756701

At this census there were five classes instead of 3 viz. :—

P—With this as Principal means of livelihood without subsidiary.

PS—With this as Principal means of livelihood with some other as subsidiary.

S—With this as subsidiary.

PD—This as means of livelihood of those partly dependent.

TD—Total dependents on those with this means of livelihood; this figure includes partly dependents.

The total population as shown at the top of the table is made up of the totals of the columns P, PS and TD. The table does not include figures for the population of the Gilgit Agency (76526).

4. The number of classified means of livelihood at this census was 236 against 195 in 1931. Groups against which there are no entries have not been shown in the table.

5. Having stated in para. 1 above that the table produced is useless for statistical purposes it is unnecessary to go into the defects in detail but some instances may be given :—

(i) Group 27. A total of 52 persons have been recorded as dependent on this M/L. It is known that thousands are partly dependent on bee-keeping.

(ii) Group 28. A total of 231 persons has been shown as dependent on the rearing of silkworms and only 2986 persons with this as a subsidiary M/L. It is known that over 60000 persons rear silkworms as a subsidiary occupation.

(iii) Group 86. A total of 65 persons has been shown as dependent on the manufacture of matches, fireworks and explosives whereas there is a prosperous match factory at Baramulla in the Kashmir Province and it is known that many others manufacture fireworks and explosives.

(iv) Group 122. A total of 84 persons is shown as dependent on the making, assembling or repairing of motor vehicles and cycles, eleven of whom are shown as engaged in this work as their principal M/L. There are numerous motor and cycle repair shops throughout the towns of the State and the numbers dependent on this trade in one way or another must run into some thousands.

These examples have been given to show that the table does not present a correct picture of the facts. These defects are due to three causes :—

(a) Defective answers given by those censused.

(b) Defective work by some enumerators due to carelessness or ignorance or both.

(c) Defective work by sorters and compilers.

6. As already remarked it would be waste of paper and printing to re-produce Part II giving details by districts. Even though defective, Part I—Summary for the State—has some value in spite of its defects. It gives a general idea of trades and occupations followed in the State and gives totals for each M/L for comparison with the figures for 1931 and those to be produced at the next census.

7. The grand totals for PS and S in the table should have been the same, that is to say, the total of column 5 should be the same as that in column 7 and column 6 should be the same as column 8, if the table were correctly prepared, although the components making these totals will not agree. This error is obviously due to defective compilation. The defect was detected after it was realised the table was useless for statistical purposes any how and in the interests of economy it was not considered worthwhile to retain staff to work on a table which was in any case worthless for statistical purposes.

8. It must be recognised that the questions on which this table is based are not easy for an educated person to answer correctly. Whatever may have been the experience elsewhere they were too difficult for good results in this State. In 43154 slips the questions were not answered at all or the answers were such as to be useless for the purposes of the table. Scrutiny of the relative table produced in 1931 discloses the fact that the figures given therein for many occupations are not in accordance with known facts.

9. As the main table is so defective no attempt has been made to re-produce figures for the 1/50 sample or to prepare subsidiary tables.

NOTE.—P stands for Persons, M for Males and F for Females.

IMPERIAL TABLE IX

Industry

NOTES

1. No Imperial Table was compiled for Industry at the 1931 Census ; the corresponding table in the 1931 report is State Table VI. The table now compiled and produced does not give a correct picture of Industry in the State and it should not be used for statistical purposes.

2. The industries have been classified in accordance with the lists received from the Census Commissioner for India ; those against which there were no entries have been omitted from the table

3. The table is based on the answers to census questions Nos. 14 and 16 which read as follows:—

14. What is your means of livelihood ?

16. If you are employed by someone else what is his business ?

These questions were very poorly answered ; in many cases they were not answered at all. The response was also poor to the special enquiries made in 1931 and State Table VI for 1931 is also unreliable for statistical purposes. Some specific reasons may be given for declaring the present table useless for statistical purposes.

(i) Sixteen industries shown in the table for 1931 do not appear in the present table at all although they are all known to exist. For instance: cotton-printing, papier machie, lime works, toy factories, hydro-electric works, waterworks, and tent factories.

(ii) The figures given against all industries are ridiculously small. Under 'Textiles' the total population employed in the silk industry is shown as 515 and in wool carding, spinning and weaving 82 ; we know that thousands are employed in these industries.

The figures under 'Wood' are equally ridiculous. The extraction of timber is one of the biggest industries in the State and provides employment for thousands ; the total for all categories is shown as 135.

(iii) Under group III 8 persons are shown as rearing silk worms ; we know that over 60,000 persons are so employed.

(iv) Many industries are not shown at all such as :—
Group V—mines and quarries—stone quarries are numerous ; group VI—Textiles—none are shown as employed in rope-making. Under group VII none are shown under Taxidermy although there are a number of taxidermists in Srinagar City. Under group XI four persons are shown as employed in making matches, one as a supervisor and three as clerks ; there are no operatives shown at all. Santonin extraction is not shown at all. There are factories at Baramulla both for the manufacture of matches and the extraction of santonin. Sufficient examples have been given to justify condemnation of the table.

4. It would have saved space and printing to have omitted this table altogether but it was thought better to produce it if only to show how bad it is so that the subject may receive special attention at the next census. It is doubted, however, if the census agency is suitable for getting reliable detailed information regarding industries.

IMPERIAL TABLE X

(i) Unemployment by age and locality for less or more than one year.

(ii) Educated unemployment.

NOTES

1. The corresponding table in the 1931 report was Imperial Table XII. On this occasion the information is presented in a different form. In 1931 figures were given for "Educated unemployment" only.

2. The total 'Educated unemployed' shown in 1931 was 289; on this occasion the figures given in Part II total 3837 including 200 persons with degrees.

3. The figures shown in the present tables cannot be regarded as giving a true picture of the actual position; they must be regarded as an under-statement. The uneducated classes are seldom entirely unemployed for long in the real meaning of the term; labour in the State is not organised and many in this class are under-employed rather than unemployed.

(ii) The figures shown for 'Educated unemployed' are far nearer the facts than those given in 1931 but it is probable the actual figures when the census was taken were nearer 5000 than 3837; it is thought that many actually unemployed have not so declared themselves.

4. Of the total 'Educated unemployed' 2675 or 70 per cent. belong to the Kashmir Province and 1069 or 28 per cent. to the Jammu Province. The maximum amount of educated unemployment in any district is found in Anantnag with 2066 or 54 per cent. of the total for the whole State. Srinagar City is situated in this district and contributes largely to the big percentage shown; the actual numbers for Srinagar are 1391 or more than 36 per cent. of the total for the whole State. The figures for Jammu City present a big contrast; only 133 educated persons belonging to Jammu City are shown as unemployed.

5. The table does not include the population of the Gilgit Agency. The figures were not compiled for that area but it may be stated that educated unemployment is negligible.

IMPERIAL TABLE XI AND ITS SUBSIDIARIES

Literacy by Community and Age

NOTES

1. The corresponding table in the 1931 Report is Imperial Table XIII. On that occasion the table was in three parts. The present table is in four parts; the figures for the whole State and for Provinces are given separately whereas in 1931 they were given together in Part I.
2. This table does not include the population of the Gilgit Agency (76526). The figures for that area were not compiled for this table. It may be stated that the standard of literacy in the Gilgit Agency is low actually and also in comparison with other districts in the State.
3. (i) All persons below 5 years of age are treated as illiterate as in 1931 but whereas in 1931 the age group 0-5 was shown in the table on this occasion it has been omitted as redundant.
(ii) In the 1931 table the last age group shown was for 20 and over; in the present table those aged 20 and over are split up into three groups.
(iii) The totals for 'Scheduled Castes' and 'Hindus' in column 3 of the table are shown as 133498 and 575456 respectively. These totals exclude the age group 0-5; inclusive of the age group 0-5 the totals will not agree with the totals in Table XIII but with those given in Table XIV. The reason is that 39072 Arya Samajists of Scheduled Castes origin were shown with 'Other Hindus' in Table XIII and with Scheduled Castes in Table XIV. Thus the total number of persons with Scheduled Castes origin is 152536 as shown in Table XIV and not 113464 as shown in Table XIII. When the defect in Table XIII was detected it was thought better to explain the position in the notes to the tables rather than to reconstruct Table XIII.
4. Those shown as literate in English in columns 12, 13 and 14 of the table are also included in the figures for literates given in columns 6, 7 and 8.
5. The figures for Christians have been shown under one head and not under four different heads. Practically all European Christians may be considered literate; the numbers of those describing themselves as Anglo-Indians at the census was negligible.
6. The census questions provided for an answer with regard to the script of literacy and the record was sorted for local comment. Owing to the script controversy, which was going on at the time of the census, the answers given were not in accordance with fact and are useless as a basis for discussion. They have been ignored because to use them would only give rise to misunderstanding.
7. (i) The total literates in the State excluding Gilgit Agency, are 238384 at this census representing 6.9 per cent. of the total population over five years of age given in the table (3421325), against 123386 (excluding Gilgit Agency) in 1931. The figure for Frontier Illaqs (Gilgit Agency) in 1931 was only 499.
(ii) In 1941 we have 47615 literate in English (excluding Gilgit Agency) against 19455 (excluding Gilgit Agency) in 1931. There were only 14 persons literate in English in the Gilgit Agency in 1931.
(iii) There are 202976 literate males at this census out of a total male population, over 5 years of age, of 1825402 (excluding Gilgit Agency) against 114321 (excluding Gilgit Agency) in 1931. The percentage for 1941 is 11.1. There were 486 literate males in the Gilgit Agency in 1931.
(iv) There are 35408 literate females at this census out of a total female population, over 5 years of age, of 1595923 (excluding Gilgit Agency) against 9065 (excluding Gilgit Agency) in 1931. The percentage for 1941 is 2.2. There were 13 literate females in the Gilgit Agency in 1931.

8. The figures for literacy given for the Buddhist community in this table and for the Ladakh District, where nearly all the Buddhists in the State live, are not reliable. Information received from reliable travellers, which has been confirmed by the District Census Officer, is to the effect that about 90 per cent. of adult Buddhists are literate in their own language—Boddhi or Bhotia of Ladakh which is a dialect of the Tibetan language. It seems clear that the local census agency considered, erroneously, that literacy in Bhotia did not count.

9. (i) There are 126819 literates in the Jammu Province giving a percentage of 7.4 to the total of the population of the province over 5 years of age (1714829).

(ii) Similar figures for the Kashmir Province are 105238 literates out of 1500423, giving 7 per cent.

(iii) In the Frontier Districts (excluding Gilgit Agency) there are 6327 literates out of 206073 which gives 3 per cent.

(iv) For the two cities the figures for the two main communities are :—

Place	Community	Persons	Literates	Percentage
Jammu	{ Hindu	.. 26756	15163	56.6
	{ Muslim	.. 13868	5580	40.2
Srinagar	{ Hindu	.. 38024	23040	60.5
	{ Muslim	.. 143037	17497	12.2

(v) The percentages of literacy for the main communities for the whole population over 5 years of age excluding Gilgit Agency are as follows :—

Community	Persons	Literates	Percentage
Muslims	2615491	110692	4
Hindus (including Scheduled Castes)	708954	106877	15
Sikhs	55815	17765	32
Buddhists	37153	1920	5
Scheduled Castes (Separately) ..	133498	2036	1.5

The figures for Buddhists are subject to the remarks with respect to this community in para. 8 above.

10. **Subsidiary (i)—**

The proportion of literates per 10,000 of the population aged 5 and over was 409 in 1931.

11. **Subsidiary (ii)—**

(a) The figures are best for Jammu District followed by Anantnag. Ladakh makes the poorest showing but the remarks in para. 8 must be taken into consideration.

(b) Of the two cities the figures for Jammu are the better both as regards proportion of literates as well as for literate females.

(c) The progress of literacy is shown in the following table :—

			Literate per 1000		
			1941	1931	1921
State	70	41	26
Jammu Province	74	49	27
Kashmir Province	70	35	26
Frontier Districts (excluding Gilgit Agency)	31	25	19

12. **Subsidiary (iii)—**

- (a) As there are no literacy figures available for Gilgit Agency the columns against this district have been left blank.
- (b) The blanks under the Buddhist community against many districts mean that there are no Buddhists in such districts.
- (c) The figures given in the corresponding table for 1931 are per thousand of the community population and not per ten thousand as shown at this census.

13. **Subsidiary (iv)—**

- (a) Where there are blank spaces it is to be understood no figures are available.
- (b) The figures for literacy in English in Anantnag District, which includes Srinagar City, are easily the best. This has been the case in previous censuses too.
- (c) Jammu District which includes Jammu City, shows the best figures for females literate in English.

14. **Subsidiary (v)—**

- (a) This subsidiary clearly shows the marked improvement in the decade 1931-41 as compared with 1921-31.
- (b) The Chenani Jagir shows a fall from 120 per 1000 literates in 1931 to 68 per 1000 in 1941. Unfortunately, figures for 1921 are not available for comparison. The Chenani Jagir is backward educationally compared with all other districts in the Jammu and Kashmir Provinces and it seems obvious that the 1931 figures were inflated due to some unknown cause.

15. **Subsidiary (vi)—**

- (a) The figures given in this table are based on data supplied by the Director of Education for 1941 and 1931 with the exception of those for Poonch Jagir, Gilgit (Leased Area) and Gilgit Agency. The data for Poonch Jagir was supplied by the Administrator, Poonch Jagir and for Gilgit (Leased Area) and Gilgit Agency by the Assistant Political Agent Gilgit.
- (b) The figures given in the text of the 1931 Report and in the marginal table referring to the subject do not agree. The figures given for 1931 in the present report are based on information supplied by the Director of Education.

16. **Subsidiary (vii)**—

Persons shown as able to read only have been treated as partly literate; they have not been included in the tables with literates. This information has been produced in the form of a subsidiary because the subject is of local interest.

17. (i) Information is given below showing the number of newspapers in the State and the number of printing presses in 1931 and 1941. The information was obtained from the Publicity Department of the Chief Secretariat.

News papers and Printing presses—

(a) *Newspapers during 1931 and 1941.*

		1931 Number	1941 Number
Jammu & Kashmir State	1	44
Jammu Province	1	24
Kashmir Province		20
Frontier Districts		

(b) *Printing Presses during 1931 and 1941.*

		1931 Number	1941 Number
Jammu & Kashmir State	8	37
Jammu Province	4	22
Kashmir Province	4	15
Frontier Districts		

(ii) The first newspaper was published in the State in 1924 and the first press installed in 1912.

(iii) Local newspapers are mostly printed in the Persian (Urdu) script; a few are in English (Roman) and Hindi (Devanagari) scripts.

(iv) The circulation of newspapers is not known.

(v) No details are available regarding the publication of non-educational books in the State. The number is few but is increasing.

18. A 1/50 sample was extracted for this table. The comparative results are shown as a subsidiary. The table is confined to two age groups 5-30 and 30 and over for the main communities. To give greater detail did not seem necessary.

NOTE.—P stands for Persons, M for Males and F for Females.

IMPERIAL TABLE XII AND ITS SUBSIDIARIES

Mothertongue

NOTES

1. The table is in two parts as was the corresponding table XV in 1931. It is based on the answers to census questions 18 and 19—Mothertongue and other Indian languages in common use.

2. Part I is the main table giving the various mothertongues spoken in the State and classified in accordance with the scheme of classification issued by the Census Commissioner for India. The mothertongues are given under three main heads:—

A. Languages of India.

B. Languages of other Asiatic countries and Africa.

C. European languages.

The method of presentation of the main table is slightly different to that adopted in 1931 and on this occasion four subsidiary languages have been given in Part II instead of three; Hindustani, which includes both Hindi and Urdu, has been added. This language is of All-India interest as well as of local interest.

3. Part II is divided into sections A and B. The former shows the extent to which the four chief subsidiary languages are used and the latter the extent of Polylingualism; in this case those speaking more than two languages, including their mothertongue.

4. An Appendix follows Part II (B) showing the classification of dialects adopted for the purposes of the table. The classification of these dialects, many of which are associated with local place names, is based partly on local knowledge and partly by reference to the 1931 Report.

5. (i) 'Hindi' and 'Urdu' have been combined and shown as Hindustani with the approval of the Census Commissioner for India.

(ii) The term 'Hindustani' replaces 'Western Hindi' in the classification shown in Part I (A). This has been done in consultation with the Census Commissioner for India to make the position of Hindustani quite clear.

6. Thirteen mothertongues have been shown in Part II of the table as against ten in 1931; those added are Bodhi, Kishtwari and Dardastani and they all refer to isolated areas.

7. (i) In Part II (A) the main language under which each mothertongue has been shown in Part I has been given in brackets. The method adopted in the classification of dialects has been referred to in note 4 above.

(ii) The languages selected as subsidiary languages for the purposes of this part of the table are those most in use.

(iii) The column "Total returning the mothertongue" has been added to the table to facilitate appreciation of the table.

8. The totals of the persons speaking the mothertongues shown in Part II (A) will not agree with the totals shown against the same mothertongues in Part I but with the totals against each given in the Appendix referred to in note 4 above. This is because Part I shows the total speaking the mothertongue inclusive of dialects whereas Part II (A) does not. Take Kashmiri as an example. Part I gives a total of 1549460 persons with this as mothertongue whereas Part II (A) shows 1512912

persons only. The difference, 36548, is accounted for by the total of those dialects grouped with Kashmiri in the Appendix. In Part I Dogri is included under Punjabi—columns 32-34—in accordance with the classification scheme for the languages of India, but in Part II (A) Dogri and Punjabi are rightly shown separately as it is a matter of particular local interest to do so; it will be seen that more persons speak the dialect 'Dogri' than the main language 'Punjabi'.

9. **Subsidiary (i)**—

- (a) This subsidiary has been prepared in accordance with the scheme issued by the Census Commissioner for India. The method of presentation of the corresponding table in 1931 was different; for this reason figures are not available for columns 6 and 7 and they have been left blank.
- (b) The word 'Dogri' in brackets against Punjabi is to indicate that the figures given includes Dogri with Punjabi as in the case of Part I of the table.
- (c) Column 8 shows the localities where each language is chiefly spoken. Only the names of those Tehsils have been given against each where at least 10 per cent. of the population of the tehsil speaks the language. Where column 8 is blank it indicates that the language is not spoken by 10 per cent. of the population of any tehsil.
- (d) The use of the Tibetan Group of languages is almost entirely confined to the Ladakh District.
- (e) Shina and Burushaski are scarcely used except in the Astore, Gilgit (Leased Area) and Gilgit Agency Districts.
- (f) Kashmiri is spoken widely from Karnah to Bhadrawah with a sprinkling of persons using it in Poonch, Uri and Reasi.
- (g) Gojri, the language of the Gujjars, is included with Rajasthani. Pahari which is shown separately in the scheme, is closely connected with Gojari and is spoken in much the same areas.
- (h) Dogri is the language most used in the Udhampur Kathua, Jammu and Chenani Jagir Districts.

10. **Subsidiary (ii)**—

- (a) The languages selected for this table in 1931 were Dogri, Kashmiri, Punjabi, Gojari and Pahari. On this occasion we have excluded the last two named but included Hindustani; the same languages are given as subsidiaries in Part II (A).
- (b) The Table is based on the figures given in Part II (A) for Dogri, Kashmiri and Punjabi and on Part I for Hindustani as the figures for the latter are not given in Part II (A).
- (c) In 1931 the corresponding table was given by Natural Divisions. On this occasion the figures are given by Districts.
- (d) This table brings out clearly the widespread use of 'Hindustani' as a subsidiary language.

11. **Subsidiary (iii)**—

- (a) In 1931 the corresponding subsidiary table gave figures only for Kashmiris, Gujjars and Shins. On this occasion we have expanded the table to cover the elements inhabiting Ladakh.
- (b) The figures given in columns 3 and 4 of the table against Balti, Gujjar, Kashmiri and Shin have been taken from Imperial Table XIV; the tribe 'Kashmiri' includes Kashmiri

Pandits, Kashmiri Muslims, Hajjams, Hanjis, Sheikhs and Syeds of Kashmir Province the figures for all of which have been taken from Imperial Table XIV—Part III.

The figures for Buddhists have been taken from Imperial Table XIII and the figures given for Ladakhis are the population figures of Ladakh Tehsil shown in State Table I. The figures for 'tribe' are necessarily approximate. The method adopted is the most accurate possible for the purposes of this table.

- (c) The figures given in columns 5 to 8 are based on Table XII—Part II (A). In columns 5 and 6 are given those speaking the language as mothertongue without any subsidiary. The figures have been arrived at by subtracting the sum of the speakers of subsidiary languages from the total of those returning the language as mothertongue in Table XII—Part II (A).
- (d) The totals shown in columns 7 and 8 have been obtained by adding up the number of persons under subsidiary languages under each particular mothertongue in table XII—Part II (A).
- (e) This table also brings out the widespread use of Hindustani as a subsidiary language.
- (f) Kashmiri and Shina have not only maintained their widespread use, *vide* columns 5 and 6 as compared with 1931 but shown an increase. The figures for Gojri, on the other hand, show a decrease or weakening in the use of the tribal language. These indications cannot be accepted as tendencies until confirmed by the figures for 1951.

NOTE.—P stands for Persons, M for Males and F for Females.

IMPERIAL TABLE XIII AND ITS SUBSIDIARIES

Community

NOTES

1. This table gives the population of the State by communities but as the communities of the State are recognised by religions rather than by tribes there is little change from 1931 when the corresponding table was for population by Religion—No. XVI. In 1931 the table showed the following religions :—Hindu with details of Brahmans, Aryas and Brahmos given separately, Sikh, Jain, Buddhist, Zoroastrian, Muslim, Christian and Tribal. On this occasion we give as communities Hindus, with Scheduled Castes shown separately, Muslims, Christians, with details of Indian Christians, Anglo-Indians and Others given separately, Sikhs, Jains, Parsees, Buddhists, Jews, Tribes and Others.

2. The figures for Arya Samajists were extracted by special request and since they are available they are given below :—

			Persons	Males	Females
State	87356	46657	40699
Jammu Province	85656	45674	39982
Kashmir Povince	1675	968	707
Frontier Districts (excluding Gilgit Agency)	25	15	10

The figures for Aryas for Gilgit Agency are not available. In any case they are negligible. Aryas, whatever their origin, have been included with Hindu—Others, columns 8 to 10 of the table.

3. (i) The following fourteen castes have been included in the figures given for Scheduled Castes :—Barwala (Barwar), Basith, Batawal, Chamar, Chuhra, Dhiyar, Dom, Gardi, Jolaha, Mang (Megh), Ratal, Saryara, Watal and Harijan. The individual strength of these castes is given separately in Table XIV. The first thirteen named are the same as those treated similarly in 1931. On this occasion we have added those describing themselves as Harijans with the approval of the Census Commissioner for India.

(ii) The table shows 39072 fewer persons under Scheduled Castes than in Table XIV. This is because that number, having joined the Arya Samaj, were treated as Hindus—Others. The total of persons of Scheduled Castes origin is however 152536 as shown in Table XIV.

4. To meet the special request of local representatives the figures for Shias were separately extracted. These are included with Muslims in the table. The figures given below do not include Gilgit Agency as the record for that area was not sorted separately for Shias. A large proportion of the Muslims of the Gilgit Agency belong to the Shia Sect.

			Persons	Males	Females
Jammu and Kashmir State	205999	107014	98985
Jammu Province	4595	2436	2159
Kashmir Province	59717	32336	27381
Frontier Districts (excluding Gilgit Agency)	141687	72242	69445

In 1931 the population of Shias was 279819 including Gilgit Agency. At this Census inclusive of Gilgit Agency it may be assumed they totalled 280000. This figure is necessarily approximate.

5. The entry under Tribes is misleading. It includes those only of the tribes known as Shins, Yashkuns and Sansis who, according to the record, have not embraced Islam or Hinduism. Those Shins and Yashkuns who are now Muslims have been included with Muslims in this table and the Sansis who have been admitted to Hinduism have been included with 'Hindus—Others'. The following table reconciles the seeming discrepancy between Tables XIII and XIV:—

Tribe	I	CONVERTED TO									Those not converted (Total shown in Table XIII)		
		Shown in Table XIV											
					Islam			Hinduism					
		P	M	F	P	M	F	P	M	F	P	M	F
2	3	4	5	6	7	8	9	10	11	12	13		
Shin	..	5823	3076	2747	5822	3075	2747				1	1	
Yashkun	..	21886	11569	10317	21885	11568	10317				1	1	
Sansis	..	1665	856	809				1616	829	787	49	27	22
TOTAL	..	29374	14501	13873	27707	14643	13064	1616	829	787	51	29	22

The figures for Shins and Yashkuns in the Gilgit Agency were not extracted and cannot be shown here or in Table XIV.

6. The entry under 'Others' consists of 93 persons who showed no community at all in reply to the census questions on which the table is based and 2 atheists who gave no details by which their real community could be decided. Of these 95 persons 15 were males and 80 females; those describing themselves as atheists were both females living in Srinagar City.

7. The figures given below show at a glance by communities the population figures in 1931 and 1941 respectively, the percentage increase in the decade 1931-41 and the proportion each community bears to the total population. The smaller communities have been included with 'Others' here for the sake of convenience.

	1931	1941	Increase	Proportion
			Per cent.	Per cent.
Total	3646243	4021616	10.29	
Muslims	2817636	3101247	10.07	77.11
Hindus	736222	809165	9.90	20.12
Sikhs	50662	65903	30.08	1.64
Buddhists	38724	40696	5	1.01
Others	2999	4605	53.55	.11

The above figures are given in greater detail in Subsidiary (i).

8. Subsidiary (i)—

(a) The table gives the general distribution of the population by communities and localities. The communities are the same as those shown in the similar table in 1931 except that we have added 'Others'. The localities are the same—Natural Divisions.

(b) Since 'Others' have been shown on this occasion for the first time no entries can be made in columns 3-II.

(c) In the case of blanks in column 2 it should be understood the proportion is less than 1 in 10000 and in the case of blanks in columns 3-11 that the figures are not available from previous census reports.

(d) Variations all represent an increase except where a minus sign is given.

9. **Subsidiary (ii)**—

(a) The table is the same as the corresponding subsidiary in 1931 except that we have added 'Others' to the main communities to cover the whole population.

(b) Gilgit (Leased Area) and Astore are separate Census Divisions on this occasion; together they constituted the Gilgit District in 1931. As separate figures are not available for these two districts previous to 1941 we have given the figures for the old Gilgit District taken from the 1931 report for periods 1911 to 1931.

(c) The blanks under the Buddhist community should be taken to indicate either that no Buddhists live in the areas to which the columns refer or that the numbers are too small to show.

(d) In a few cases only are any figures available for 1901. As 'Others' appears for the first time no figures can be given for periods previous to 1941.

10. **Subsidiary (iii)**—

(a) This is similar to the corresponding subsidiary in 1931 except that on this occasion there is no column for the actual number of Christians in each district. The numbers are small but are given below by provinces for the benefit of those who require them :—

				Actual Number		Percentage variation.
				1941	1931	
Jammu and Kashmir State	..			3509	2263	55
Jammu Province		2788	1753	59
Kashmir Province		555	339	63.7
Frontier Districts		166	171	—2.9

(b) The standard form for this subsidiary provides two columns to show the variations for 1901-1911 and 1901-1941 respectively. As the information necessary to complete these two columns is not available by districts from previous census reports the two columns have been omitted. The figures for 1901 are however available for the whole State and by Provinces and are reproduced below :—

				Actual Number		Variation
				1941	1901	
Jammu and Kashmir State	..			3509	422	732 %
Jammu Province		2788	145	1823 %
Kashmir Province		555	244	127 %
Frontier Districts		166	33	403 %

(c) The variations shown in the table and in these notes are all increases unless a minus sign is given.

(d) The figures required for columns 3 and 4 are not complete ; where they are not available in the corresponding table for 1931 the spaces have been left blank.

11. A 1/50 random sample was extracted for Imperial Table XIII ; the results are given in tabular form following subsidiary (iii). In the table given below the results of the sample are compared with the actuals in the main table. It will be observed that the results of the Sample are fairly accurate in the case of the main communities but naturally are far from satisfactory in the case of small communities. The figures for Gilgit Agency are not included in the Sample. The total 3945090 is the total population of the State (4021616) less that for Gilgit Agency (76526).

Comparison between Imperial Table XIII and the results of a 1/50 Random Sample.

JAMMU AND KASHMIR STATE

(Excluding Gilgit Agency)

Community		Figure in Sample Results	Figure in Col. 2×50	Actual strength from Table XIII

IMPERIAL TABLE XIV

Variation in Population of Selected Tribes, Scheduled Castes and Important Elements

NOTES

1. This table corresponds to Imperial Table XVIII of the 1931 report. It has been expanded beyond the scope for which provision was made in the standard form to include information of local interest. It is in three parts. Part I gives detail of Selected Tribes, Part II of Scheduled Castes and Part III of other Important Elements.
2. In column 1 of the table only those districts have been shown in which the particular tribes, Scheduled Castes or elements dealt with are found. It would serve no purpose to give the names of districts for which there are no entries.
3. The tribes, Scheduled Castes and important elements are given in alphabetical order.
4. (i) Figures are not available for the Gilgit Agency as the record was not sorted for this table.
(ii) The figures for Astore and Gilgit (Leased Area) Districts are given separately for 1941. As these two districts together previously constituted the old Gilgit District the figures given for 1931 are for the old Gilgit District; they cannot be split up for Astore and Gilgit (Leased Area) separately. For this reason the variations cannot be shown separately for these two districts.
5. The only classes of the population treated as tribes in 1931 were the Pernas and Sansis, who were described as criminal tribes, and the Shins and Yashkuns who were described as primitive tribes. These four tribes have been selected for Part I of the table on this occasion but to call them 'Selected Tribes' is not a correct description. The fact is the distribution of the population of the State cannot be given satisfactorily on a tribal basis; it can be shown by community (religion), caste and to some extent by race but before it can be shown by tribes an authoritative classification of the various 'tribes' constituting the whole population is necessary. It is reasonable to show the few Pernas and Sansis there may be as 'Tribes' but to classify Shins and Yashkuns as 'Primitive Tribes' without comment when all have embraced Islam would be misleading. The Shins and Yashkuns have only been shown on this occasion because they were so shown in 1931.
6. (i) There were 42 Pernas shown in 1931 in the whole State; on this occasion there are none. These people earn their living as wandering minstrels and dancers and are said to have a very low standard of morals.
(ii) The Sansis are classified as a criminal tribe; they are gipsies and are described as adepts in theft and house-breaking. In 1931 they numbered 134 and on this occasion 1665. The large proportionate increase, the whole of which and more is shown by the Jammu District must be attributed to an influx of these gipsies from the Punjab at a time just previous to the actual census.
(iii) The Shins and Yashkuns belong to the Astore and Gilgit Districts. Whatever their origin they have now all embraced Islam. The Shins are said to be of Hindu origin. The Yashkuns were described by the Political Agent, Gilgit in 1931 as being of Turanian origin but that intermarriage with people of Tartar and Aryan descent had obliterated most of their original characteristics.
7. A decrease is shown in the totals of both Shins and Yashkuns because there are no figures available for either for Gilgit Agency for reasons already given. For the areas for which figures are available there are increases of both and had the figures for Gilgit Agency been forthcoming there would certainly have been an increase of both in the totals. It will be seen that the decrease shown on the totals of each is less than the total for each shown for Gilgit Agency in 1931. Had figures for Gilgit Agency been made available the percentage increase for all districts for these two tribes would probably have been about the same as the percentage increase for the whole population.

8. The caste system is the result of the ancient Indian custom of classifying the population according to different social and working orders. The number of castes has been multiplied due to the increase through the ages of occupational and social differences. There are some who recognise the caste system as sound owing to the inevitableness of differences in occupation and social standing; others condemn the caste system on the grounds that it withholds from many privileges and opportunities which afford advantages which should be within the reach of all irrespective of birth and occupation. In Part II of our table we give figures for those castes which together are covered by the collective term 'Scheduled Castes'. These classes are variously known as 'Depressed Classes', 'Untouchables', or 'Harijans'. They are the backward and lower class elements of the Hindu community. In recent years their lot has been improved by the activities of various social, religious and political societies, by legislation and by Government orders removing many of the disabilities under which they previously suffered. The total population of those included in the Scheduled Castes in 1941 was 152536 against 170928 in 1931. In 1941 they represented 18.8 per cent. of the total Hindu population against 23.2 per cent. in 1931. This decrease of 18392 is probably due partly to conversion to other religions, partly to the activities of Arya Samajists and partly to a reluctance on the part of some to show themselves as belonging to the Scheduled Castes. There is a distinct tendency for members of the Scheduled Castes to lose their old identity.

9. Blank spaces should be understood to mean that in 1941 or 1931, as the case may be, no members of this caste were recorded in the district against which the blank is shown.

10. The figures for Scheduled Castes given are for those only who described themselves as Hindus by religion. Sikhs, Muslims and others belonging to the same or equivalent castes have not been included.

'Harijan' has been added to the list of the thirteen Scheduled Castes for which figures were given in the 1931 report. This was done with the approval of the Census Commissioner for India because a number of members of the Scheduled Castes now describe themselves as Harijans. It will be noticed that 2815 did so in 1941.

11. Part III gives some of the information given in Imperial Table XVII—'Race, Tribe and Caste' in 1931. There is no provision for giving information regarding castes at this census in the standard tables. In view of the fact that our tables for tribes is of little interest or value it was decided to give the figures for the more important groups in addition to those for Scheduled Castes, under the heading 'Important Elements.' The figures given are of local interest. The 34 groups given were selected from :—

(i) Castes with numbers exceeding 10000 in 1931.

(ii) Those whose social status, political importance or special character are such as to justify inclusion.

12. It is not easy to adduce reasons for the decreases shown by some castes. The record was not sorted for all castes so it is not possible to compare a large decrease in one caste with a phenomenal increase in an allied caste with any certainty. Nor is it possible to give details to show the number of enumeration slips in which caste was not recorded at all. It is possible that legislation declaring certain castes to be agricultural and to be qualified to purchase agricultural land and others as non-agricultural, and precluded from such purchases in certain circumstances, has had some effect on the record. In spite of the fact having been stressed that the census record is not used, and cannot be under the Census Act, as evidence in connection with any subject other than the census, it is possible that some have not declared a caste which is not recognised as being one which includes agricultural classes.

13. (i) In 1931 the Brahman caste was shown under four heads—Kashmiri Pandits, Mohyals, Sikhs and others; on this occasion Kashmiri Pandits have been shown separately; the heading Brahmans includes Mohyals and others only; it does not include Sikh Brahmans. The 1931 figures given are for the same classes.

(ii) The caste shown as Hajjam (M) on this occasion was shown as Hajam in 1931 and then included Hindus and Sikhs. Hajams were also shown as a sub-caste of 'Kashmiri Muslims'. In

the present table Hajjam (M) refers to Muslims only. The figures shown for 1931 include the Muslim Hajams shown in 1931 plus the sub-caste shown under Kashmiri Muslims on that occasion. Similar action has been taken with respect to the Hanjis (M), Syeds (M) and Sheikhs (M).

(iii) In the 1931 table for Jats figures are given separately for Hindus, Muslims and Sikhs. In the present table only the Hindu and Muslim elements have been given. The 1931 figures are for these two classes only.

(iv) Figures for Jhiwars were shown separately for Hindus, Muslims and Sikhs in 1931. The present table gives the figures for Hindu Jhiwars only both for 1931 and 1941.

(v) The total for Kashmiri Muslims is not shown in the table for 1931; the totals for sub-castes were then given separately. To arrive at the 1931 total given in the present table for Kashmiri Muslims we have taken the totals of all the sub-castes with the exception of Hajams, Hanjis, Syeds and Sheikhs; the latter have been shown separately.

(vi) In 1931 figures for Khatris were given separately for Hindus, Sikhs and Jains.. On this occasion they are given for Hindu Khatris only; the 1931 figures are accordingly given for Hindus only. Similar action has been taken in the case of Kumiars (M), Lohars (M), Lohars (H), Mahajans (H), Tarkhans (M) and Telis (M).

(vii) Figures have been given for Buddhist Mangriks only on this occasion; the Muslim element has been excluded.

(viii) Thakkars or Thakars have been included with Rajputs (H) as in 1931 but those describing themselves as 'Rattan Rajputs', have not been included as Rajputs (H).

(ix) 'Qureshis' have been included with 'Syeds'. As there is some doubt about the correct classification of those describing themselves as 'Qureshis' it may be stated that the number of those so included is 16564 consisting of 8593 males and 7971 females. Their inclusion with Syeds in this table does not of course in any way alter their actual status.

(x) The caste returns are believed, for various reasons, some of which have been mentioned in note 12 above, not to be correct but they are probably accurate enough in most cases for general purposes. The fall in the number of Gujjars can be partly balanced against the large increase in the closely connected group called Bakerwals. Similarly, the big fall in the numbers for Tarakhehas may be connected with the large increase in Tarkhans. The number of Syeds in Ladakh could not normally increase from 9 in 1931 to 2601 in 1941. There must be some factor to account for this abnormal preference for the Syed caste. Makmis who numbered 77347 in Ladakh in 1931 are not shown at all at this census in the Ladakh District. It is probable that the big increase in those describing themselves as Baltis is largely responsible for this.

There is a very heavy fall in the numbers of those describing themselves as Bafindas. This is particularly noticeable in the districts Poonch Jagir, Mirpur, Reasi and Kathua. The large increase in Rajputs (M) in the same districts may have a close connection. In any case minor caste distinctions are not important enough to call for more detailed inquiry and discussion.

IMPERIAL TABLE XV

Europeans and Allied Races and Anglo-Indians by race and age

NOTES

1. The table is in exactly the same form as the corresponding Table XIX for 1931.
2. Badami Bagh Cantonment does not appear in the detail given under "Cities and Cantonments." This is due to the fact that the villages Sonawar and Bonimsar though lying within the administrative area of the Badami Bagh Cantonment were censused under arrangements made by the Census Officer for Khas Tehsil by arrangement with the Cantonment authorities. The elements dealt with in this table living within the area of the two villages named are included in the figures for Anantnag District.
3. All districts have been shown; blanks indicate that none of the elements shown in this table live in such districts.
4. Allied races include non-Asiatic races such as Australians, Canadians, Americans and South Africans, in fact all white races as distinct from Asiatic, Mongol, Negroid and Polynesian races.
5. Only those describing themselves as Anglo-Indians have been treated as such. The numbers are very small and suggest wrong descriptions in a number of cases. The number recorded as Europeans and Allied Races was 423 in 1941 against 321 in 1931; the number of Anglo-Indians 7 in 1941 against 123 in 1931. This fall of 116 in Anglo-Indians since 1931 accounts in full for the increase of 102 Europeans. The number of true Europeans and Allied races living in the State in 1941 is believed to have been less than in 1931.
6. The figures given against Jammu City and Cantonment are also included in the Jammu District and those against Srinagar City in the figures for Anantnag District.

NOTE.—P stands for Persons, M for Males and F for Females.

IMPERIAL TABLE XVI

Summary of figures for Districts

NOTES

1. The table is in the same form as the corresponding Imperial Table XX in the 1931 report. There is a small change in the communities given. In 1931 figures were given separately for Hindus, Muslims, Sikhs, Christians, Buddhists and others; on this occasion they are given for Hindus, Muslims, Indian Christians, Tribes and Others. The figures for those communities not included in this table are however given in Imperial Table XIII.

2. In the figures for Density fractions have been eliminated; fractions of less than .5 have been ignored and those in excess treated as whole numbers.

3. The ' Tribes ' for which figures have been given have been discussed in the notes to Table XIII.

4. The figures for 1931 are not available separately for districts Astore and Gilgit (Leased Area) as in 1931 these constituted the old Gilgit District. The 1931 figures given in columns 6 and 10 are the population and density figures respectively for the old Gilgit District.

5. The variations in every case show an increase.

NOTE.—P stands for Persons, M for Males and F for Females.

STATE TABLE I

Area and Population of Tehsils

NOTES

1. The table is in the same form as State Table I for 1931 except for the addition of columns 13 and 14.

2. (i) The areas of Tehsils are not authoritative ; they have been adjusted to agree in total with the areas of the districts in which they are located. They are accurate enough for all practical purposes.

(ii) In 1931, the area 4 square miles of three villages, two located in the Jammu Tehsil and one in the Ramnagar Tehsil, belonging to the Poonch Jagir, was included in the area given for the Poonch Jagir. In the present table the areas of these villages have been included in the areas of the tehsils in which they are located *viz.*, 3 square miles with the Jammu Tehsil and 1 square mile with Ramnagar Tehsil. The population of these three villages has been shown accordingly as discussed in note 4 to Imperial Table I.

3. The details of the two cities of Jammu and Srinagar given separately at the end of the table have been included in the figures of the tehsils in which they are located, *viz.*, Jammu Tehsil and Khas Tehsil.

4. The names shown in brackets against tehsils Uttarmachipura, Sri Pratapsinghpura and Pulwama in the Kashmir Province are the local names by which these tehsils are frequently known.

5. The changes in the number of towns shown in each district have been discussed in note 7 to Imperial Table I.

6. All variations represent increases unless a minus sign has been given.

7. (i) The mothertongue shown in column 13 is that returned as mothertongue by the majority of the population of the area.

(ii) The number of those shown as speaking any particular mothertongue against Districts, (other than Gilgit Agency) Provinces and for the whole State will be found to agree with the figures given in Table XII Part II-A and not with those given in Part I of that table as the figures shown in the latter include dialects.

(iii) The details given in columns 13 and 14 for the Gilgit Agency and the illaqa of that district are those supplied by the Census Superintendent, North-West Frontier Province, who sorted the record.

8. (i) As the districts Astore and Gilgit (Leased Area) together constituted the old Gilgit District in 1931, they are joined together by a bracket for the purposes of columns 9, 10 and 11.

(ii) The illaqa Kuh and Ghizar of the Gilgit Agency were shown separately in 1931 but constitute one unit in 1941 according to the details supplied by the Census Superintendent, North-West Frontier Province.

9. The figures given in column 14 show clearly that Kashmiri and Dogri are the two languages in greatest use.

10. The figures given in column 12 indicate a high density in many tehsils which are entirely agricultural.

STATE TABLE II

Population of Districts and Tehsils by Communities and Literacy

NOTES

1. The form and detail of the table are the same as in the corresponding table in 1931 except that in 1931 the details given under Hindus were for Brahmans, Other Hindus and Depressed Classes whereas on this occasion the details under Hindus are given for 'Scheduled Castes', and 'Other Hindus.' The term 'Scheduled Castes' refers to the same elements of the population as those described as 'Depressed Classes' in 1931. Also, Buddhists have been omitted on this occasion and Tribes included. The details under 'Others' almost entirely relate to the Buddhists. The form adopted is in accordance with that prescribed by the Census Commissioner for India.

2. The heading 'Christians' includes Indian Christians, Anglo-Indian and Other Christians and the figures for literacy given thereunder are for all classes of Christians.

3. The population figures for all communities given for the whole State include the population of the Gilgit Agency but the figures for literacy do not. This is because the figures for literacy for the Gilgit Agency were not made available. The same remarks apply to the figures shown against 'Frontier Districts.'

4. The three districts Chenani Jagir, Astore and Gilgit (Leased Area) each consist of one tehsil only; they are each shown twice, as districts and as tehsils, for the sake of uniformity.

5. Blanks throughout the table indicate that there are no figures to give.
